Topic: 32453 Message: 32453

I'd like to ask Jim in Bournemouth (and anyone else who owns one) how it performs. Any sign of overload or signals where they shouldn't be? I've got an RTL-SDR dongle and I know how much benefit the variable IF bandwidth can have and it's limitations. Low dynamic range is what kills it off - although it's OK in the OIRT band as generally there are no strong interfering signals - except around 74MHz I see aliasing signals from Band 3 DAB - the same as I can get Band 2 FM signals showing up around 32-34 MHz.

Has anyone used it 'out of band' on the OIRT band? I would expect it would need an external BPF to prevent ou of band signals aliasing (mixing) with the oscillatr frequency and appearing where they are not wanted.

Topic: 32453 Message: 32455

Hi David,

I have no problems with overload on band 2.

Rowridge has 4 250kw TXs 39km away line of sight, giving me a signal of 70dbuf.. and while I have several images throughout band 2 on the Perseus FM+, I have none at all on the Elad. Cedric down in central France has an even stronger signal and he has no images either on his, but he finds he needs to use 2db of attenuation at the antenna to reduce noise floor presumeably due to overload.

The Elad does not cover the OIRT band – if you try to tune to it on the Elad software, the program will tell you it’s out of range.

I should try with SDR Radio and see what happens.

Jim.

Bournemouth, Dorset IO90BR.

8 element OP-DES yagi at 22-32ft, wideband vertical, Perseus SDR receiver with FM+, Elad FDM-S2 SDR Reciever, Funcube Dongle Pro+.

Thanks Jim,

Wrotham is 32km - generally I'm not beaming at the site so have a lot less than 70 dBu - more like 55dBu. I have one station on 102.8 - its only 1kw but line of sight some 16km away in the prime DX direction and gives around 70dBu.So sounds like I should be OK.

I shall have to convince myself to spend some money - once I've upgraded to a newer computer.

David,

Can I just add that I am very pleased with my Elad. I live line of site and only 3 or 4 miles from wenvoe. Listening to fm on a car radio or anything other than an excellent portable is a severe challenge with BBC stations all over the band. The Elad is a dream. The only very faint spurious signal I get is Radio 2 on 87.7 and all my tuners give me that only stronger.

Added to that, with the filters set narrow I'm getting several more French stations during light lift conditions than I ever got with my Sony tuners.

The question about OIRT is interesting. As Jim says the software shows out of range, but it also says that on the lower air band and I'm still getting good signals there. So it may be that some OIRT is possible, but I haven't received anything this year on my the sun although it was performing well last year, so I haven't had a chance try.

Simon

** Personal Skegness 'First'

The day began with some scatter from France, which i snot so common at
the new address. Then scatter improved in the direction of Germany.

Tropo began during the early part of the evening, initially to
south-east England, then extending into northern Germany, Denmark and
finally Norway after 2100. All traces of tropo had gone by 6am local time.

Good DX!

From: fm104rockinstereo@...
Topic: 32453 Message: 32470

I uploaded four short video samples to my website about a fortnight ago (1 x DRM, 1 x 2m beacon, 2 x FM tropo). Please email me privately if anyone is interested & I will simply forward on the email with the links.

Paul, I use a new i7 laptop & rarely notice stuttering upon playback (NB. I'm using the same software as Jim). Dave, I haven't noticed images on FM band. I'm located 12 km from 100 kW Brisbane stations using the Korner 15-el (with a 19 decibel preamp) at 45 degree null to Brisbane site.

Happy Es season!

Hi Andy,

Up to 6.144Mhz.

One can use 192, 384, 768, 1536, 3072, 6144khz bandwidths according to your needs and PC speed. If you have an older PC and it struggles at 6144, you can always use a lower b/w.

hello andy, yes it's very easy to link with rds spy with mux stream. You can use 4 channels with 4 link to 4 rds spy session. After many test and comparison, the best solution for rds decoding it's elad software linked with rds spy, sdr-console with rds capabilites, and elad software with embedded rds decoding.
For me (and olivier guillaume) the future it's with this sort of tuner, today the sony xdr tuner is out of date with this elad sw2. It's a good news beacause xdr sony is impossible to buy at low offer. The great value is the software with the only limit is your imagination to integrate dxfm functionnalities. But developpement known are requires to have a great dx machine.

You can find here https://www.youtube.com/watch?v=ifsd-KBKWIw a video from Patrick to show rds spy integration.

Hi All,

Well, two times a full 10 minutes period with a Band II Es opening yesterday. By this year's standard I should call this a good Es DX day.
With the Es DX being disappointing, the tropo DX decided to make up for that. And how! A very nice and long lasting opening into Skandinavia.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Hi Jürgen,

> Great catches!

Thank you.

> I saw you yesterday logging Sunne and Borås while I had Oslo for the first
> time. I was looking out for Sunne and Borås, not a trace of them. In fact
> nothing from SWE at all.
> Tropo cx can be quite odd.

It is funny that you mention this. I was looking for Oslo all the time the band was open, but nothing. While 100.0 MHz is relatively clear when beaming at 30°.

> I also was puzzled about NRK Petre Halden using 320 kW, while all other NRK's
> in that vicinity use a *lot* less power.
> Is there any reason?
> Or is it a data error?
> 320 kW is the highest power in NOR

I have some doubt about the recent changes being made in FMLIST. I can't judge Petre from Halden, since a local is blocking that channel. But for some other locations there is now also a difference in ERP listed, while I haven't been able to notice a difference in signal strength.

Here's hoping for much more Scandinavian tropo this week. Or a decent Es opening.

73, Janpeter

You have to behave like a non-Dxer and use the Straalingskalkulator: Imagine you are living in Halden and want to know your transmitter sites. Halden is in the Oostfold region. The tx is a few km north of the city.

Coordinates for Halden TX

59°10’35.95N 11°25’43.29E

I have my antenna in the ”wrong” direction for Halden but I can still hear NRK P2 weak with slight interference from SR P1 Göteborg 89,3. NRK P1 94,8 is almost doomed due to a community radio in Göteborg 94,9 which is wider than wide.

In the 1990’s there was no problem to receive Halden with a telescope antenna indoors.

/Chris

You can se a panorama view from the tower in Google Earth.

As Halden stands pretty high

Subject: Re: [SkywavesDX] Re:: PERFORMANCE OF ELAD FM2 ?

hello andy, yes it's very easy to link with rds spy with mux stream. You can use 4 channels with 4 link to 4 rds spy session. After many test and comparison, the best solution for rds decoding it's elad software linked with rds spy, sdr-console with rds capabilites, and elad software with embedded rds decoding.
For me (and olivier guillaume) the future it's with this sort of tuner, today the sony xdr tuner is out of date with this elad sw2. It's a good news beacause xdr sony is impossible to buy at low offer. The great value is the software with the only limit is your imagination to integrate dxfm functionnalities. But developpement known are requires to have a great dx machine.

You can find here https://www.youtube.com/watch?v=ifsd-KBKWIw a video from Patrick to show rds spy integration.

Thanks Jim

So that’s 3.84 times wider than the FM+ (FM+ is 1.6 MHz)

Do you know if you can successfully feed the audio output to RDS Spy?

Andy.

Hi Andy,

Up to 6.144Mhz.

One can use 192, 384, 768, 1536, 3072, 6144khz bandwidths according to your needs and PC speed. If you have an older PC and it struggles at 6144, you can always use a lower b/w.

Jim

With regard to linking to RDS spy using VAC - you need a soundcard capable of 192kHz sampling rate on the soundcard input whichever way you do it. Some "192kHz" cards are only 96kHz on the input side.

Next big question - what about the computer? Currently I have a Core i3 quad core 2.13Gb/s laptop. I was thinking of buying a s/hand Dell 780 with CoreDuo processor running at 2.93 or more. Windows 7 OS. Which also raised the sub-question 32-bit or 64-bit? Prices are around £125-£150.

I don't really want to shell out a huge amount - I'm not into gaming - but with a desktop I can add a suitable soundcard for another £50 (maybe) - keeping costs under control.

I tried to find a price for the ELAD FM2 but cannot find it anywhere.
Does anybody have any info please?

Also, I wondered how "future proofed" the FM2 is. i.e. are there likely
to be software updates which will improve specs or does one have to wait
for newer models?

Thanks

John

£450.

Yes, that sounds about right regarding Moore's Law. :O) I was thinking along the lines of the earlier software versions of the Perseus SDR, they did actually make several improvements with software updates. I think we were all Guinea pigs in those days and Elad probably won't be releasing regular beta releases based on hobbyist's suggestions.

Perhaps this is the way to go, as opposed to having an XDR or two for backup.

Cheers

32496. RE: [SkywavesDX] Re:: PERFORMANCE OF ELAD FM2 ?

Yahoo group: SkywavesDX (2014)
Date: 2014-06-16 17:03:26 UTC
From: Jim Smith G0OFE
Topic: 32453 Message: 32496

Actually – the Elad software team have been open to suggestions – they have adopted one or two of mine already. Others asked for a very narrow CW filter, and they provided this in response in their new release last week.

Also, you don’t *have* to use Elad’s own software with it – SDR Radio works very nicely with it, as does Studio 1 apparently, though I have very little experience of the latter, and none with it using the Elad.

Jim.

£450.

Yes, that sounds about right regarding Moore's Law. :O) I was thinking along the lines of the earlier software versions of the Perseus SDR, they did actually make several improvements with software updates. I think we were all Guinea pigs in those days and Elad probably won't be releasing regular beta releases based on hobbyist's suggestions.

Perhaps this is the way to go, as opposed to having an XDR or two for backup.

Cheers

John

I tried to find a price for the ELAD FM2 but cannot find it anywhere. Does anybody have any info please?

Also, I wondered how "future proofed" the FM2 is. i.e. are there likely to be software updates which will improve specs or does one have to wait for newer models?

Thanks

John

With regard to linking to RDS spy using VAC - you need a soundcard capable of 192kHz sampling rate on the soundcard input whichever way you do it. Some "192kHz" cards are only 96kHz on the input side.

Next big question - what about the computer? Currently I have a Core i3 quad core 2.13Gb/s laptop. I was thinking of buying a s/hand Dell 780 with CoreDuo processor running at 2.93 or more. Windows 7 OS. Which also raised the sub-question 32-bit or 64-bit? Prices are around £125-£150.

I don't really want to shell out a huge amount - I'm not into gaming - but with a desktop I can add a suitable soundcard for another £50 (maybe) - keeping costs under control.

Thanks Jim.

I have only been dipping in and out of this thread as there is no way I can afford such a unit at the moment. When I have some more pennies I will definitely consider this. As it's not my birthday until March, Christmas might be the closest I would dare to hope for receiving such a thing. I narrowly missed an XDR on Ebay the other week which sold for £86. I was only a couple of £s short.

In view of the comments in this thread it looks like the Elad FM2 is the next serious step forward for FM DXing.

Thanks

John

From: Satnipper
Topic: 32453 Message: 32498

That is actually a good point.

I'd be surprised though if we saw subsequent Elad software releases talking the recordable bandwidth to, say, 12 Mhz. A few tricks are already in place with under sampling etc.

However Blade RF is supposed to be capable of 20+ MHz so I would not be surprised in next two years with still faster FPGAs, CPUs and cheaper chips to see a device on the amateur consumer market which can do 20 MHz.

I don't have an Elad but from Jim says the basic front-end RF engineering is solid as opposed to the FM+ which sucks big time - so unlike the Perseus itself which has a solid fe at MF/HF.

** Personal Skegness 'First'

This is the first log I have made using remote tuning. I was out at a
car boot this morning and controlled the XDR via TeamViewer. Apart from
car boots It looks like I might have to be out a lot more over the
coming weeks, so remote tuning might be my only option.

Good DX!

Here’s my daily reception of NRK P2 89,1
101,5 and 94,8 are almost gone here. Norkring must have done something.

You can hear slight interference from SR P1 Göteborg which I turn over to shortly.

Thanks for the link Ruud. I thought I had this one bookmarked. I do now :O)

Interesting to see how that map suggests things might improve around 0600.

It's fading away slightly now while moving down from southern Norway into western Denmark. It hasn't been overwhelmingly strong but some Norwegian transmitters were up to 28dBf and had full RDS. One transmitter even had full RDS at 18dBf. Sorry, I should have noted down which one. Bokn on 91.1 I think it was.

Nice to meet Phil in South Wales, Gianni in Italy and Janpeter for the first time on TeamViewer. I discovered something though - two or more simultaneous connections on TeamViewer and my poor old laptop slows down badly. Three connections and it just about collapses! I could do with some more RAM as it only has 1GB and a slow Celeron processor.

Good DX!

This is a non-exhaustive list of retailers that stock the Elad Fantasy Dream Machine S2 (FDM-S2). It was accurate in late March. All ship globally.

http://www.hamradio.co.uk

http://shop.elad-usa.com

http://ecom.eladit.com

http://wimo.de

http://woodboxradio.com http://woodboxradio.com

Jim's observations about older PCs are of course quite correct, but myself & and the two US enthusiasts who helped set mine up (on the WTFDA mailing list & the Elad SDR English forum) all decided to individually buy a new i7 laptop to optimally run this SDR at maximum bandwidth.

Happy Es hunting!
Leigh

Hi John,

look at http://ecom.eladit.com/
I don't have the S-2 but I'm using Elad antenna splitters ASA-15 from many years and now ASA-62, too. The last one was developed by Elad after our request, so I can say that Franco Milan, the owner of Elad I know personally, listen to DXers requests!

I tried to find a price for the ELAD FM2 but cannot find it anywhere. Does anybody have any info please?

Also, I wondered how "future proofed" the FM2 is. i.e. are there likely to be software updates which will improve specs or does one have to wait for newer models?

Thanks

John

With regard to linking to RDS spy using VAC - you need a soundcard capable of 192kHz sampling rate on the soundcard input whichever way you do it. Some "192kHz" cards are only 96kHz on the input side.

Next big question - what about the computer? Currently I have a Core i3 quad core 2.13Gb/s laptop. I was thinking of buying a s/hand Dell 780 with CoreDuo processor running at 2.93 or more. Windows 7 OS. Which also raised the sub-question 32-bit or 64-bit? Prices are around £125-£150.

I don't really want to shell out a huge amount - I'm not into gaming - but with a desktop I can add a suitable soundcard for another £50 (maybe) - keeping costs under control.

Thank you Alessandro. This is very encouraging. I am already saving up
my pennies for this. :O)

Best wishes.

32515. Exceptional Tropo Continues

Yahoo group: SkywavesDX (2014)
Date: 2014-06-17 13:13:56 UTC
From: John Faulkner, Skegness
Topic: 32515 Message: 32515

Norway reduced in strength slightly ofr a time but seems to be making a comeback. Denmark is now the prominent country. Some Dutch and German activity is also starting.

The amazing thing about this tropo is not the signal strengths but the large number of local stations which have been coming through.

Recordings and video to be posted soon.

Good DX!

John

I just said that signals were not that strong. Well, Rangstrup is now 40dBf, quite a signal and low powered Danish local stations are coming in well. The weather is dry and bright. Partially cloudy and definitely not the sort of weather I would have associated with daytime tropo.

I have to go out now so I hope these conditions are still here on my return.

I wonder how long this will last?

Good DX!

John

You need to download the ExtIO_FcdProPlus.dll and place in C:\Program Files\HDSDR from

http://hdsdr.de/download/ExtIO/ExtIO_FcdProPlus_v04.zip

Then set bandwidth to 192000

Andy.

Yes it was good tropo to Norway/Denmark and it was good to have a tune this morning on your XDR.
I did check the frequencies here as I was tuning but all occupied here.

** Personal Skegness 'First'

What a day! Today saw my personal best tropo to Norway with about a dozen "naerradio" (local) stations coming across the sea. Denmark also put on a good show with many locals. There were many personal firsts from this event.

On the sporadic E side, can you believe that there have been FIVE openings today? They were all very fleeting and very weak with only two openings producing enough signal to reveal the RDS. What a t_*E*_ase!

At the time of compiling this log (23:00) the tropo has disappeared. An early night for me!

Good DX!

John Faulkner, Skegness, Lincolnshire (JO03dd) <3m ASL.

32552. SDR Radio Apps For Android?

Yahoo group: SkywavesDX (2014)
Date: 2014-06-18 07:42:22 UTC
From: John Faulkner, Skegness
Topic: 32552 Message: 32552

Are there any reasonably performing SDR radio apps for Android phones? I don't mind paying a small amount if it means better performance. I have a Galaxy Note 3.

Thanks

John

I have SDR touch, but you need to root your device to install the drivers for the RTL dongle. If you want to listen to remote stations, then there are 2 projects (both forked from same source project). One is on the Play store called https://play.google.com/store/apps/details?id=org.v1al Or the forked sister project - http://napan.ca/ghpsdr3/index.php/ and while both are buggy, they have been getting much better and more stable every day, partly as CPU speed has increased on mobile devices. I had both demo'ed at the Newbury amateur radio rally this weekend gone.

I have a cheap Chinese fake ipad (that runs Android) and it's quite happy (by default it's already rooted) SDR-Touch app provided you have used the low CPU setting in the menu.

Thank you Ced and Dennis.

I am new to the term "rooting" and so Googled it. /For those not in the know (like me) it is the process of unlocking the phone so unauthorised software can be installed. /

I have found another app called Android Root http://www.cnet.com/uk/how-to/how-to-easily-root-an-android-device and wondered if this was the best one to use for the rooting procedure.

I will try Ced's suggestion first and see how it goes. Hopefully I will try both, but unlocking the phone sounds a little scary to me but my techie friend should be able to help.

Thanks.

John

I think we may have got our wires crossed. Probably my fault. I was trying to turn my Samsung Note 3 into an SDR. If I am correct, the apps suggested only control receivers remotely or require a dongle.

I might be trying to bite more than I can chew here.

32560. RE: [SkywavesDX] SDR Radio Apps For Android?

Yahoo group: SkywavesDX (2014)
Date: 2014-06-18 09:07:12 UTC
From: Satnipper
Topic: 32552 Message: 32560

According to the specs there is no radio hardware (not even an FM tuner) for that purpose in the Note 3 – so per se you cannot turn it into a self-contained SDR.

Highlights of yesterday's Norwegian reception can be seen here:
https://vimeo.com/98520046

This is a live DXing session lasting about 51 minutes in which you will see and hear the DXing as it happened, including web streams and logging. As always, the general quality has had to be reduced to keep file sizes small, but I have upped the bitrates slightly for this one.

Good DX!

John

32562. Re: [SkywavesDX] SDR Radio Apps For Android?

Topic: 32552 Message: 32562

That's a shame. My friend has successfully managed to do this on one of his mobile phones (Samsung, I believe too) though I do not know the model.

Thanks

John

Not really, I gave options for both. The option that allows you to control a RTL dongle via USB uses SDR Touch, but to do this you must install the driver to control the dongle. This means rooting first. Rooting isn't always easy, every device I own has required a different method to root it, and where I owned 2 of the same device with different versions of Android I've needed 2 different methods to achieve this. Rooting is not without some risks, but I always recommend getting a second device to play with if you have never done it before. It's good fun finding out what your previously locked down device can actually be made to do. Even a second hand phone or tablet is good enough.

Attached (if all goes to plan) is a photo of my Samsung Galaxy Note 3 running SDR Touch.

Hmm you don't need to root your phone / tablet for SDR Touch, it works fine on my unrooted Note 10.1 and Minix X7

Another one to try is Wavesink which will decode DAB / DAB+ also but either of these are quite poor for any DX reception

Thanks Ruud.

It was a very good opening. The sort you would normally associate with the autumn. So ... autumnal tropo and a lack of Es. I have to keep checking the calendar to convince myself we are still in June. It really feels like autumn right now, especially with temperatures struggling to reach 15 degrees here thanks to the northerly wind.

Paul,

Since the town of Santiago is being mentioned in the first clip I'm pretty sure the newscast's about this:

http://hoy.com.do/implicados-intento-asesinato-jordi-veras-condenados-a-30-20-y-10-anos-de-prision/

Hence, Dominican Republic apparently

Congrats!

107.0 0657 D WDR Eins Live, Olsberg (nrw) Almost noise free on scatter. As 106.7 592km
99.0 0705 D hr1, Hoher Mei?ner (hes) Vocal ID after news 684km
87.8 0709 D WDR 2, Schwerte/Sommerberg (nrw) Pops, as web 525km

No post-tropo flatness this morning. Instead, some good scatter!

The only thing of note here today is that we found out we have received TWO more complaints about my FM antenna, bringing the total to three! At this rate we are going to end up with more complaints than we did from our previous neighbours! I won't go into detail here, but I have written a full account on my blog if anybody wants to know more. Just to conclude that the head of planning from the housing association paid us another visit today and, despite the complaints, fully approved and signed off the installation, and so the good news is that it has passed all the tests and can stay where it is. There is more good news about the aerial in the account of today's events on my blog. Thankfully common sense prevails once again.

Good DX!

Hi folks,

I constantly keep loosing track of my memory. Which meteor shower is supposed to be active, or is this just rapid Es flashes, or even reflections by thunder storms?

From around 1130 UTC, furiously intense rapid flashes to my location, from Czech to Germany. Intensity about the same rate as major meteor showers.

David, John, anybody? Please, enlighten my ignorant stupidity.

Yes, I already checked the calendars.

Man. some wild storming fury, I might say. Two hours of constant
pinging, reminded me of the most active even meteor storms of past
winter. Not much to cheer about, though:
the reflections kept shorter than say 10 seconds, almost all the time.

Maybe there was a thunder storm frontier somewhere inbetween. Curious
enough, I noticed no other Finnish DXer logging. Presumably, they
were jammed on the roads, on their way to the Midsummer festivities?

Great stuff Phil.

Keep at it.

The current tropo here might just be confined to the east coast. I usually know when it has spread inland as those areas become enhanced at the same time, sometimes blocking out the continental signals.

Things are improving with some of the lesser heard Dutch stations starting to produce RDS.

Good DX!

I believe, if you email directly to the editor[s] in charge, the
snappiest action will result.

I myself have added some Sveriges Radio links, still, I suppose it is
best if one person does the whole job. I cannot remove any link added
by someone else, as I am no FMLIST editor.

About a year ago or so, there used to be them angient quick links to
SR P1, P2 and P3 [about P4, I no more remember], but last autumn
somebody removed a whole lot of live stream links and replaced them
just by HTML links. I gather, that was no good a solution. I did
return some of them root-leading links, but just for a number of frequencies.

32601. Reltek HD Audio and 192KHz sampling for RDSSpy - Help!

Yahoo group: SkywavesDX (2014)
Date: 2014-06-20 21:21:23 UTC
From: davebunyan@...
Topic: 32601 Message: 32601

Has anyone managed to get RDSSpy working with an integrated soundcard using Realtek High Definition Audio?

On my PackardBell LM86 you have an audio recording device called "StereoMixer" which allows you to feed the soundcard output into RDS Spy. This can be set to 192KHz sampling rate. After downloading the latest drivers the microphone input can be set to 192kHz sampling rate. The soundcard is certainly sampling at 192kHz as the audio spectrum extends to 96KHz as at 96KHz sample rate it only extends to 48kHz, whilst at 48kHz sample rate it cuts off above 24kHz.

However the audio spectrum itself nose dives above 48kHz and shows all the characteristic of a Low pass filter with a max attenuation around 60kHz. Playing back a downloaded white noise file which should have a flat output to 96kHz confirms the roll off above 48kHz.

So it is specific to my computer - or is that standard for Realtek HD Audio? The codec is AL272X.

On RDSSpy someone has posted that it works on his HP620 laptop

Also raises the question - how do you find out if a sound card which can sample at 192KHz will have a wide enough audio response to encompass the 57KHz sub-carrier,without buying it first?

This is what makes the hobby so interesting - the unexpected. I have read about the possibility of thunderstorms affecting the E layer of the ionosphere. I would have thought lightening strikes would provide sufficient ionisation to reflect VHF signals. I don't how you can find out whether there were any storms at the time.

A COUPLE OF FELLOW DXers adviced me of some meteor shower calendars I
was not familiar with. No hits.

I reckon, it must have been a storm frontier with severe thundering,
even more so as the reflections kept coming from Czech, to Germany in
the westernmost. Not even the most common Slovak, Fun Radio on 87.7 did pop up!

EVERY NOW AND then, there is discussion on thunder storms correlating
with Es. All I know is, as a thunder storm rises right above, the
current Es dies almost instantly. But, as to thunder storm frontier
and lightnings reflecting VHF, I no more can recall my experiences in the past.

IN CASE YOU FOLKS did not know, here in Finland we are just living
through the Midsummer festivity. In Sweden, folks fiest the same. The
Sun does not set at all, it is bright as daytime, all night. Except
for the fact, this Midsummer is cloudy and rainy. And cold, it even
snows in northernmost Finland!!!

This night, also is the day of the Finnish national flag. In my
quartiers, I seem to be the only one having the flag raised all night.

ANYWAY, I HOPE them Dear Sirs bring us all some Es, in the near future.

Date: 2014-06-21 14:22:45 UTC
From: davebunyan@...
Topic: 32601 Message: 32611

I haven't checked out your suggestion because as soon as I read your statement that "Stereo Mixer" samples the analogue filter I decided that I would have to trial Virtual Audio Cable. I found Andy Pritchard's instructions on how to use it to link HDSDR and RDSpy - and I got some sort of result.

Mind you I can't quite understand what is going on - something is buried in the system somewhere as I have RDSSpy set to VAC line 2 - but nothing feeding VAC Line2 !

It will probably crash when I shut down the computer - but at least I know that the soundcard will handle 192kHz sampling.

There is a high bit error rate showing - don't know why - I suspect it might the repetitive voice ~"trial" - I can understand it being there - but it is a bit too frequent to allow a decent evaluation.

Anyway thanks for your help do far - I shall keep at.

Rgds

From: John Faulkner, Skegness
Topic: 32613 Message: 32613

Not sure but I think there was an Es opening to Spain just then. One station. Barely enough for RDS!

87.6 COPE Cordoba.

Good job I didn't blink!

John

32616. Re:: Reltek HD Audio and 192KHz sampling for RDSSpy - Help!

Yahoo group: SkywavesDX (2014)
Date: 2014-06-21 15:53:15 UTC
From: davebunyan@...
Topic: 32601 Message: 32616

RESULT!!

It should mean that anyone with a computer that has Realtek HD Audio can loop the internal signal from an SDR to it - but the analogue inputs are filtered and has at least 70dB attenuation by the time you get to 57kHz

How I did it - Googling HDSDR and RDSSpy took me to Andy Pritchard's web site with a set up instuction from first installing VAC to linking it to RDSSpy

I linked the RX Output to Line 1 in VAC with the the parameters 192kHz in and 192KHz out, increased "Inst" to 100 "MS per inst" to "20". (I'll check if that is really needed later)

I didn't get anywhere with Linking VAC Line to VAC Line 2 and then attaching RDS Spy to VAC2. So from Audio Repeater (KS) I set the output of VAC1 to Realtek HD Audio out - sound appeared and next , just for the heck of it I pointed the input of RDSSpy to the "Stereo Mixer" input - and RDS appeared. Stereo Mixer has to be set to 192000 sampling rate in Control Panel/Realtek HD Audio.

If you can't find Stereo Mixer hover over the speaker con in the task bar - right click then choose "recording devices" and click on 'show disabled devices"

Note: The Audio Repeater program gives the option to output to the Realtek speakers - the Audio Repeater (KS) only allows linking to Realtek HD Audio out - so must bypass any analogue filtering.

I had to then increase the "Total buffer (ms) to 1000 , "Parts" to 25 and "Priority to "High" in the Audio repeater (KS) to get the best ber%.;

I'm not sure it's quite as sensitive as my Yamaha TX-930 in wide mode feeding a TDA2330 via the soundcard to RDSSpy - but then again the RTL-SDR is nowhere near equivalent - and it's a hard one to call.

Thanks to Jurgen for the feedback and to Any Pritchard's web-site. I couldn't get it to work his way - but I'm only using 1 VAC channel and is simpler insor as you only have to set up one Audio repeater when you start up.

AND this is working at the same time as I am feeding the RDS output from a tuner into the microphone card of the on-board sound - so two independent inputs!

Rgds

David

32625. Unidentified Dutch station on 107.8

Yahoo group: SkywavesDX (2014)
Date: 2014-06-22 08:45:03 UTC
From: john.faulkner@...
Topic: 32625 Message: 32625

Dutch tropo continues.

I have an unidentified station on 107.8 this morning. The programming is very laid back with seemingly many different styles of music.

https://app.box.com/s/ifrv894085p70bajfly3 https://app.box.com/s/ifrv894085p70bajfly3

I haven't indexed the recording as I am still using Audition to record further DX extracts as there are now two Dutch stations fighting on 107.8.

Thanks and good DX!

John

32626. Another one - from Belgium

Hi John,

I think there might be even three stations fighting for the frequency. I am hearing 'de zevende hemel' (the seventh heaven) twice with a Belgium accent and when doing a google search for this in combination with 107.8 and radio, I am getting Radio Stad, which is from Antwerpen on this QRG. So it probably is this one.
The other stations interfering are too weak for me to ID.

Thank you for this, appreciated.

I have never known an opening like this across the North Sea since moving to Skegness. The top of the band is soup.

I have been logging stations as "weak" when they are actually stronger. The mush is deceptive, but the GTK display is reading in the mid 20s dBf, even when nothing is there. this is not QRN.

Lots of new stations coming through as a result - and was this forecast? Idon't even think the clusters are picking up on this. I am beginning to think it's the just the new location.

I took a drive to the sea front yesterday and the day before and the only continental station I heard on the car radio was a very weak Q Music on 100.7, whereas the FM band at home was almost wall to wall Dutch with signals in the 30s dBf with full RDS. My antenna is definitely in a sweet spot now.

Good DX!

John

This has become another Suffolk! I sometimes reminisce about the old DX trips with Cyril. Fond memories. I don't feel the need to travel there to get my DX fix anymore.

The high pressure is helping things along, no question, as things aren't usually this good. The usual Dutch, BNR 91.3 and Decibel 97.6 always peak into the upper 20s dBf though, even when conditions art flat. I will do a Dutch scan when things settle down.

Thanks again to you both.

Oh, was there anything to go by in my Belgian UNID? 106.3 unid Belgium 0855 22-06-14 (JF).mp3 - File Shared from Box <https://app.box.com/s/q700vzwocb7ousrymweh> I wondered if this was Radio Brouwer from Oodenarde as the ID I heard (before hitting the record button) sounded similar.

John

From: davebunyan@...
Topic: 32601 Message: 32632

POSTSCRIPT:

I got the setup described by Andy Pritchard working - ie VAC1->VAC2 then RDSSpy picks up VAC2. Then with the Audio RepeaterMME VAC->Realtek HD speakers.

The advantage of this is you can mute the sound from the PC without muting the feed to RDSSpy - which is what happens if you route VAC1->Realtek HD Audio device in the AudioRepeater (KS) module.

I also have the repeaters setup as shortcuts to avoid configuring every time:

"C:\Program Files\Virtual Audio Cable\audiorepeater.exe" /Input: "Line 2 (Virtual Audio Cable)" /Output: "Microsoft Sound Mapper" /SamplingRate:192000 /Priority:high /Autostart /BufferMs:400

"C:\Program Files\Virtual Audio Cable\audiorepeater_ks.exe" /Input: "Virtual Cable 1" /Output: "Virtual Cable 2" /SamplingRate:192000 /Priority:high /Autostart /BufferMs:400

Andy.

Andy

Many thanks for that - you've just saved me a whole lot of delving into the instructions to figure that out!

I've copied those into the appropriate part of the shortcut properties for next time

** Personal Skegness 'First'

I am getting behind with logs now. So many distractions, but I found some use in video recording the Es opening on the 21st. This had some benefits, It seemed to help build up a better picture of the opening as I am able to take more time this way. It is also possible to catch a lot more of the opening as there doesn't need to be any time set aside for manual logging. The downside is that you have to go through the opening twice and the second time seems much slower.

Good DX!

Thank you Reijo.

I think you are 100% correct. The Oliva / Denia areas were coming in
well at the time, so this is very likely.

Best wishes.

John

...since that astonishing multi-hop Es event here to the Middle East when Israel was positively IDed on 87.6, and a likely logging of BSKSA Holy Quran Radio on 88.6, the only tx listed being near the Yemeni border, over 5000 km away.

https://app.box.com/shared/k4lskstb8n(88.6 tent. BSKSA Holy Quran Radio)

https://app.box.com/shared/fbc1mc9h41 (87.6 IBA 88 FM)

What a contrast it is to this year, the poorest season yet for me in the 9 years I've been living in Whitchurch. I don't think we will get a repeat of that above event in 2014! Still, since then, I always feel hopeful that this date will deliver again one day. It's good to remember just what can happen if all the right ingredients come together, and that I didn't dream it!

Good DX.

Yesterday, around 1630Z I got some good Es conditions to North Italy
in a first moment with strong and stable signals. Stations going from 0
to RDS level in few seconds and lasting for some minutes. Then fading out
in a moment. Italy was replaced by the Canary Islands with the same kind
of signals... then Italy again, Canaries, Italy... I was centered in 90 MHz.
Some minutes past 1700Z that area around 90 MHz got quiet. No signals.
So I decide to move down and centered my Perseus in 88.3 MHz. At 1706Z
I discovered a weak signal with very quick and strong fading on 88.1. They
were playing some commercials in English but with a non European accent.
Caribbean??... My imagination flow away as Paul Logan has received some
stations from Puerto Rico recently. The 88.1 station was covered by another
Italian attack. I moved to 90.0 and around 1735Z things got quiet again leaving
another fluttery signal on 89.9. The same kind of propagation than the 88.1
station. In accented English also. Firstly playing some adv. then with a long
interview until near the TOH. Then some music over 1800Z and news starting
at 1800'40"...
I think they are not Caribbean signals but Africans and I think I have identified the
88.1 one. At 54" and 1.34" into the 88.1 rec. my ears are hearing the name of
a city 4000 km away from Aldea del Cano (where my receiver is). There are stations
from the same country on 89.9 too.
I am attaching some clips (long and noisy clips, I´m sorry). In some cases with the
"as-is" and filtered versions. Your views and opinions will be very much appreciated!.

Wow superb reception Mauricio. I'm guessing these are Nigerian, given the content of the news headlines on the 89.9 clip. I hear a place name on the 88.1 clip that sounds like 'Umahir' or 'Omahir' but i don't recognise it.

Congratulations on your reception. I wish you could send some here!

Good DX.

Hi Mauricio,

FIRST OF ALL, congratulations on your catches!

Now, this question of mine may sounds silly but,
what kind of antenna were you using?
I mean, why do you doubt if the stations are from Africa or the Caribbean?
At least my 8-ele yagis beam and hoover quite
strictly within some 35...45 degrees sector.

ANYWAY, JUST listened to [found the time to listen] your first clip.
Sounds to me as if there is a Dutch speaking
station, too at the beginning of the clip.
I wonder if that makes any clue of the Es direction?

At 01:30 "....chart trafficing... would you
stop...number 40... Street... Ninenah Fergus".

Can you post the links to these clips again please. For some reason they are not showing for me on the Yahoo Groups.

Thanks

John

Hi Nick!
It is "Umuaiha" the Capital city of Abia State in Nigeria. It is the Broadcasting Corporation of Abia State
BCA-FM.

Hi Ilkka,
Thanks!
I use a three elements Yagui not amplified conected to a Perseus/FM+ tandem.
Last time I was at my rx site I pointed the antena to Badajoz @230º. But I really get stations from every direction with Es conditions!. My doubts about the source of the signal comes from the accent... I can not really distinguish very well between the English accents in so poor conditions.
The station sounding Dutch for you I think it is Portuguese in fact: Rádio Comercial (Monchique/Foia, 295 km from my site).

Hi Mauricio

Thanks for commenting.

Gosh, if I could not tell Portuguese from Dutch,
maybe I should reconsider wiping off some earwax.

Anyway, I would suggest you acquire a Körner 9.2 or similar.
I am no-one to judge anyone else's antennas,
but I myself have not utilized less than 8-ele yagis since the 80's.
Back then, I found them 3- and 4-ele yagis far too omni-directional.
One really could not tell about the direction of the conditions.

In late 80's, I had the opportunity to run a test between 8-ele yagis by

Funke [GER],
Visi [ITA] and
VKN [FIN?],
right at home.
The VKN just beat the sandwich out of the two others, in every aspect.

I believe, the Körner 9.2 is very close to the
VKN performance, I never had a Körner.
It is a shame, well-designed commercial aerials no more exist.
Been thinking of making a copy of my 8-ele VKN,
to have equivalent performance on both polarizations.

Anyway, I wish you more of cool Es-catches in the future!
It was nice listening to your African clips,
I very seldom get double-skip Es from the northernmost of Africa.

Congratulations! A superb catch indeed.

I listened to the clips, thanks for re-posting to me, and noted the following.

The accents sound African to me, though I think the correct term is Afro-Caribbean. I used to work for the old "British Telecom International" as an International Linguist Operator back in the 80s/90s where I would speak to many Nigerians every day and the accents, at least to my ears, sound in keeping with Nigerian accents. I am not an expert in this however.

*88100-UNID-170736z-23jun2014.mp3*

Song with African style rhythm to open and Afro-Caribbean accented speech.

0:52 Mentioning the Chief Press Secretary in Government House in (city not clear), then Portuguese voice took over.

1:32 Mention of child trafficking (a hot topic in Nigeria at the moment) with address in Umuaiha. As far as I can see Umuaiha is in the south of Nigeria, but this is a news subject of national and international interest anyway. The address given was partly obscured.

*89900-unid-173930z-23JUN2014.mp3*

Commercial at the start

0:41 Telephone number: 0703 199 5657. The web address which follows seems to be "www.????nigeria.??" It doesn't sound like .ng. Maybe .com but unclear.

0:59 Commercial for Nigeria(?) Car Hire

1:09 P & D Cars / B & D Cars(?)

3:31 I *think* I hear a mention of Abuja.

3:51 Call 081 987 68?? P & Pete Cars(?).

Telephone dialling codes in Nigeria: http://dialcode.org/Africa/Nigeria. Pank Shin would be (0)70 and is in the centre of Nigeria. (Note: The initial "0" is only used when dialling within a country. It is omitted when being dialled from outside the country, hence being omitted in this list)

*89900-unid-174440z-23JUN2014.mp3*

Begins with Afro-Caribbean accents. Interview about a legal matter.
Nothing specific to a locality or country.

*89900-unid-180010z-23JUN2014.mp3*

US news from Washington.

Hope that is of use.

John

Thank you very much John!
In the 88.1 recording I can hear clearly Umuahia (Capital city of Abia State) mentioned both times.
FMLIST shows 3 stations on 89.9 MHz. Two in Kaduna State (Kaduna and Kafanchan) and the third in Warri (Delta State). Warri and Umuahia are in line, more or less at the same distance (4091 vs. 4000 km) while Kaduna is far north, in the centre of the country... thanks again!

Phil,

I'm just using an indoor antenna at the moment, although it is a 5 element. The plan is for it to go outside when I've had some work done on the house.

I dabbled with indoor dipoles and even with the whip on a portable for years and you can get some really good results with Sp-E. I tried using a USB dongle, but Wenvoe is too close and I got too much overloading. This year I splashed out on an Elad FDM-S2 and it really is amazing. Lucky we haven't had a good season or I would be spending every minute of the day going through recordings !

Simon

Hola Mauricio, congrats for amazing DX ! Be fast (if you report any stations..) there's always the possibility that Bellabarba "bros" are faster than you ;). They go like this (QSL responses) "Thanks for your really nice report to us. We had also another listener in "Bologna" Italy and so on..(so has started the words with tens of thousands QSL letters from the past 30 years.."

Thank you Janpeter.

I am grateful for any DX this season. Generally, it's still very disappointing with those fleeting fleeting Es at the bottom of the band. Like a permanent 'beginning of season', but there are occasional half-decent openings.

Are you using AER Listas? I just looked at this website and found lots of new information. I struggled to navigate through this until just now. http://www.fmlist.org/eafm2.php I think they moved the pages around.

Best wishes.

John

** Personal Skegness 'First'

This opening began as just another one of those teasing openings, so
typical of this year's Es season, but it developed into something quite
reasonable amd there were some good signals at times. I love these
openings into the north-west corner of Spain!

Good DX!

32693. Radio Polonia

Yahoo group: SkywavesDX (2014)
Date: 2014-06-26 09:30:27 UTC
From: BEAVAN SIMON
Topic: 32693 Message: 32693

Does anybody know if Polskie Radio ever IDS as Radio Polonia these days ?
Or if there is a station in Eastern Europe that IDs as Radio Polonia ?

I was going through some recordings of a Sporadic-E from early in the month
and came across what sounded like a weak "Radio Polonia" on 88.9mhz.
Poland had been in as well as the Czech Republic and the Balkans at the
time.

thanks

Simon

32694. Nigerian FM Stations in Spain.

Hi friends!
I am very excited as I can confirm that the 89.9 MHz station receivedhere on

Jun 23rd was in fact CROWN-FM from Warri, Delta State.I have received a quick

reply from Tayo Okotie-Eboh (info-at-crownfmng.com)confirming it:

"I have listened to all three MP3 that you supplied and can confirm that
the last

one is actually CrownFM 89.9 Warri, during a commercial break
on Monday

the 23rd of June 2014".

Thank you all who helped me with this hard recordings!

Thanks Arvid and Hannu for your recent messages!
I will put my Perseus recordings in a safe place!
... and I think I have a third station in 88.5 but very
QRMed by Cadena100-Cáceres. In 88.5 there are
two nigerians in the same area and at the same
distances than the already identified stations.
Let´s see if I can extract something from there!.

I am using several Spanish forums as well as the messages on the AER site. For some of your catches I had seen a message just last week. So it was relatively easy to retrieve them. The number of changes in Spain is the highest of all European countries I think. Also PI codes change frequently.

Regards, Janpeter

Thank you Janpeter.

I am grateful for any DX this season. Generally, it's still very disappointing with those fleeting fleeting Es at the bottom of the band. Like a permanent 'beginning of season', but there are occasional half-decent openings.

Are you using AER Listas? I just looked at this website and found lots of new information. I struggled to navigate through this until just now. http://www.fmlist.org/eafm2.php I think they moved the pages around.

Best wishes.

John

Hi Phil. It was probably Radio Laghouat that you heard on 87.6 if it was Arabic. The other Algerian on that channel, Chaine 3, is in French and is easy to recognise because of their badly overmodulated signal.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

I think you said you were near Newport. Your best bets would probably be Caen (91.5, 95.6, 99.6 and 102.6), Rennes (89.9, 93.5, 98.3 and 103.1) and Brest (89.4, 93.0, 95.4 and 97.8) for French signals to watch for, depending on how clear the channels are. Germany would need a big tropo lift with a dipole there, but other parts of Europe should come in easily with Sporadic E.

Good DX.

Nick, Whitchurch, Hampshire.

Hi Phil.

It's a bewildering hobby when you are a newcomer. Discovering RDS "PI", "PS", "PTY", etc. Learning about propagation. How to get the best out of an antenna. Knowing when is best to listen and miriad other things. It sounds like you have an excellent start if you are comfortable with tuning SDR receivers.

The best thing of all is that it's fun to learn once the bug has bitten. Knowing when to listen and what to look for is mostly intuitive. You'll get the hang of it in no time. The fabulous people here on Skywaves always love to help so don't be afraid to ask. You could also join our Skype Live Chat. It's text only, though video and audio can be used if desired, but look for "Skywaves Chat" or try and find me by name. All are welcome.

Welcome to the fantastic world of DXing!

John

** Personal Skegness 'First'

Without a doubt, today was the most frustrating day of Es for me this season. After spending all day watching the Es cloud over eastern Europe, and expecting nothing to come of it, Es did eventually start, with typically weak and fleeting bottom-of-the-band reception of Italy (lasting a few seconds), Algeria (lasting a few seconds), Greece (lasting a few seconds) and Montenegro (lasting a few seconds).

An hour into this never-quite-got-started opening something more interesting happened. 88.0 had Es with a male speaker in a language I can only describe as sounding like a cross between Greek, Dutch, German and Italian. After a few seconds of speech they played an old Sex Pistols song. It faded as quickly as it appeared. I wasn't recording at the time as I initially assumed this was Holland. The signal lasted only fifteen seconds or so. No other Es were coming in at the time.

A few minutes later I had a station on 90.2 playing what vaguely sounded like Indian music, with a flute as the lead instrument. I managed to record the tail end of this. It too was fleeting and weak, but at least I was now recording. Then nothing for a few more minutes.

Suddenly 89.4 sprung to life with a male speaker in a language I couldn't place at all. It sounded nothing like any European language I had heard. Good job I had been streaming this via TeamViewer or nobody else would have heard it because I hadn't realised that I had the pause button active in Bandicam, so this one got away too and none of the above quite reached RDS level.

The reception might be nothing spectacular, but I am still inclined to think it may have been double hop as the 6m map was covered in it with lots of paths running from the middle east into the southern half of England. There was more double hop than single hop being reported at that time.

:O(

Hello Gianni.

Thank you for your offer of help.

I did not record 89.4 or 88.0, as explained in my email.

The music on 90.2 can be heard here:
https://app.box.com/s/fzx8moup67lwt4bni93i I would be very surprised if there is anything to go on. It's only a few seconds worth. I checked NDR Kultur from Lingen, just in case it was them (I receive this just about all the time), but you can tell by the modulation alone that it wasn't them. This music was was not in // with NDR Kultur.

Thanks

John

Thank you Juan Antonio.

Your information suggests Radio Jornal de Setúbal. This fits perfectly with conditions. The only other station listed is in the north-west of Portugal, which is out of line with the Es path, so this is the likely candidate.

Best DX.

John

Thankfully no Ramadan stations down here.

Unfortunately all the “openings” here are consisting of 20 second teases here and there, which makes identification a little challenging…..

It’s been like this all season here, with only a handful of “proper” openings to date.

Jim.

Same here Tim I have a Strong Ramadam station from Manchester on 87.7 so no chance of hearing any weak DX now as 87.5-8 is the only quiet part of the band here.

Andy

On Saturday, 28 June 2014, 12:00, "'Jim Smith G0OFE' radio@... [SkywavesDX]" <SkywavesDX@...> wrote:

Thankfully no Ramadan stations down here.

Unfortunately all the “openings” here are consisting of 20 second teases here and there, which makes identification a little challenging…..
It’s been like this all season here, with only a handful of “proper” openings to date.

Hi folks,

Just to mention, there is currently an exceptionally active MS concentration taking place, considering past spring and the early summer meteor showers. The scatter rate is close to [vy] high, from around 12 noon UTC.

I suppose, should start or already be giving pretty decend reflections west to east, as the reflections are quite rapid and short to me. I.E. the penetration angle is not optimal, to my QTH.

At around 1245 UTC, as if somebody had turned a switch:
the rockin' show got almost totally cut off.

Must have been some rapid Es along but, by the strong doppler in the
strongest scatters,
there definately was intense MS on.

Hello John ,

Although you could not get an ID, the recording is pretty obvious. It was indeed Rádio Jornal de Setúbal, broadcasting a traditional music request programme. But the most interesting detail is that, as far as I know, the 2 kW transmitter for RJS was/has been running at... 0.050 kW (don't know if the situation is kept). Yes, just 50 W, covering only the city of Setúbal. Actually, I was told few years ago that their tx needs some maintenance work.

73 & good DX!

That's quite amazing Luís. It demonstrates the power of sporadic E propagation.

Sometimes Es openings only permit the stronger stations to get through. Others, the weaker locals get through just as easily. The latter was definitely the case with today's opening, as is apparent on the video of this opening at: https://vimeo.com/99405218

Many thanks.

John

Great John,
Due to this reception I remember the year 1995 when I was doing a fly drive on Madeira early June and heard on two or more days many UK and northern French stations on FM with just a portable radio and telescopic antenna.
This event looks very common to me driving around the island.

Wow! Was this tropo or Es Ruud?

I imagine the FM band was relatively empty back in 1995. That would have been a DX paradise. Perhaps no so today with all the stations listed there - I think it was Tim who visited only a few years ago and commented how congested and overloaded the band was. Correct me if I am wrong.

We need a dedicated DX island, well away from strong transmitters. Now, where would that be today?

John

Hi

Scilly Isles were good with a fairly empty band when I went back in 2004 I could hear Spain via tropo on a portable radio using only its whip antenna on some days.

I could also hear France, Mullaghanish from West of Ireland and from Wales it was Havefordwest and Wenvoe every day under flat conditions.

However you cannot take a car over unless you live there so you wont be able to take much DX equipment.

Please explain

Around that time I was getting ES reception which was rather broken and affected by electrical noise on the band and a number of times there would be a burst of static and with a second or two the recption would jump to a very strong signal. Probably lasted for 15 minutes - I made the note in the log as 17:32UTC and then reception settled to a strong sustained opening.

Could it be that a thunderstorm somewhere was triggering the ES? I was going to raise this as a topic.

Rgds

32782. Band II Sporadic E Loggings for 28 June 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-06-28 21:27:25 UTC
From: Janpeter van Dijk
Topic: 168 Message: 32782

Hi All,

An intense Band II Es opening this evening. For a good part a very wild opening also, with the MUF junping to 100 MHz out of nowhere at the start. Followed by rapid MUF bouncing between 100 Mhz and below 87.5 MHz. The skip area moved around all over the place, only staying at a certain region for a couple of minutes. Signals were mostly very distorted. But, I had an opening at my location, WOW!! So no complaints. And more of this please. Some UNIDs in my list this time, any help will be much appreciated.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Yes, David, I will explain.

This logging of mine, Es+MS hop:

87.70 1915 ALG Radio Chlef, Aïn N'sour
(48) 4...5 words in arabic, ca. 2
sec. Es+MS [MS-hop ca. 1300-1500 km] 3395km

Combined Es+MS beyond 3.000 km appears to be quite possible.
We have also discussed the issue among the Finnish listeners.
Since 8/2013 I have a few of such cases,
mostly from Spain.

As I recall the skywaves conversation of, was it
Aug. 2013, there was a reference to a world
record MS reception in the year 1986, with the distance around 3.600[?] km.
I wonder if there, too, was a a case of a douple hop:
Es+MS involved.

73, ilkka

Subject: Re: [SkywavesDX] Es Balkans/SE Europe + unid 100.5 - Galaxy FM?

Nick hi: I'd say it was from Romania. Have a look from FMLIST if it's there..if not maybe a new tx as the PS you had is same as we've had during the past few years alike..
73s Hannu

2014-06-28 20:21 GMT+03:00 nick gilly nickgilly@...<mailto:nickgilly@...> [SkywavesDX] <SkywavesDX@...<mailto:SkywavesDX@...>>:

For the last 20 minutes, up to about 101 MHz at best.

A few minutes ago I had a station on 100.5 playing Euro dance with a partial PS that looked like it should be Galaxy FM, but I can't find this on FMLIST. Any ideas anyone?

Good DX.

Nick, Whitchurch, Hampshire.

Some video footage of yesterday's sporadics.

The Balkans & Italy:
https://www.youtube.com/watch?v=TTWPzFPAOeQ

Italy:
https://www.youtube.com/watch?v=3fRFX1CTzgs

Algeria & Spain:
https://www.youtube.com/watch?v=ca7zvs2fCyM

Definitely the best day of Es so far this season. There was so much coming in I recorded everything to video and I am now wading through everything. Hopefully I will have have completed this by this afternoon.

Good DX!

John

Radio Rossii, presumed Novosokolniki. Also Rossii on 70.01. Nearest listed is 2800 km, then over 4000 km. Maybe there are closer Rossiis on 70.01 ???

32792. Re: [SkywavesDX] Es > Russia + UNID Radio Rossii 70.01

In the rush - I missed out the frequency for Novosokolniki - 67.94.

6m map suggests the Es are building in that direction.

Good DX!

John

** Personal Skegness 'First'

This was the best day of E Skip for me so far this season. It's more quantity than quality though, as some might say, largely due to the video technique I have adopted, but there was one bit of quality at 1028 when I received Madeira Island for the first time.

Videos of the highlights of today's opening can be found at my YouTube and Vimeo pages, listed in the footer.

Good DX!

32802. Sittingbourne - UNID station from 28 June 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-06-29 19:34:26 UTC
From: davebunyan@...
Topic: 32802 Message: 32802

Can anyone help identify the following - received late afternoon amongst the loads of Balkan/Italian stations received. All times GMT/UTC

17:13 88.3 MHz PI: FF11 PS **--**__ . Logged on RDSSpy a number of times
17:14 88.3 MHz PI:D2DE PS: none
18:01 88.8 MHZ PI: E021 PS: Adv----- / --ve------ / Alicante. PTY: Religious talk. I would say this is Radio Adventista, Alcante
17:45 ---- MHz PI: 5359 PS: --W*GEN
17:59 ---- MHz PI:5145 PS: RADIO_-- / --UR----
18:00 ---- MHz PI: 55A5 PS: none
the three without frequency were logged by the ST-311 in unattended scanning mode in the range 87.6 - 93.1MHz and there was no match for the pi code in FMList

18:36 90.9 or 90.1 MHz PI:3200 (Very good qualityy PI dectetion) - Radio Seyhan from Turkey is the only station in FMList - but at the high end of the band.

Thanks
David
Sittingbourne

32803. SNRT Al Idaâ Al Amazighia on 89.7

Yahoo group: SkywavesDX (2014)

It's not listed on the frequencies on SNRT's relevant web page either:
http://www.snrt.ma/radio_frequences.php?lang=fr&id_radio=3

Perhaps they are activating new transmitters?

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

Hi Paul,

Some great cayches over there in beautiful Northern Ireland!

> 100.2 POR PI: 8023

This is Rádio Boa Nova from Oliveira do Hospital. So Portugal and not Madeira.

I have seen that the Huelva UNID has been solved. The Moroccan I don't know, other than that the frequency listings on the SNRT site are very much outdated. If there is someone on here that writes Arabic or French, we should start asking some questions to SNRT.

73, Janpeter

Hi John,

Can't be of much help this time. But I am sure the Italian members on here will know more.

> 89.1 1703 ? UNID, ? 3034 _T__D__I. AF 95.0 **

Radio TDI Central, tx Čačak (SRB)

> 105.0 1952 TUN Nour FM, Site? 7300 NOUR__M_ 9999km **

This is one of several stations in the greater Tunis area, that have applied for a license. To make sure the wanted frequency is not going to be occupied by another applicant, they have started transmitting already. Obviously they are confident to get a license, but that may be a misjudgment.

Thank you Janpeter.

My hope was that some of those 3xxx PI codes would be Turkey, but the conditions on nearby bands were not running out that far south-east.

Interesting regarding the situation in Tunis. 9999 km? :O) I missed that one. No part of Tunisia even falls into double hop territory for me, but it's a country I always enjoy receiving. I have also felt much more confident regarding the tx sites in Italy since I started using this new video method. Patterns become much clearer due to the larger numbers of stations being caught and logged. I may still get some wrong of course so any corrections are gratefully received.

Thanks and good DX!

John

Hi David,

Here's some tips.

> 17:14 88.3 MHz PI:D2DE PS: none

This is MR 1 - Radio Skopje from Macedonia. Several sites are listed for this QRG.

> 18:01 88.8 MHZ PI: E021 PS: Adv----- / --ve------ / Alicante. PTY: Religious talk. I would say this is Radio Adventista, Alcante

Yes, Adventista Alicante.

> 17:45 ---- MHz PI: 5359 PS: --W*GEN

Radio Alfa Due New Generation from Italy. Without the QRG I can't give you the location.

> 17:59 ---- MHz PI:5145 PS: RADIO_-- / --UR----

This is the PI for Rete Sport from Italy. But the PS does not match and without the QRG this is difficult.

> 18:36 90.9 or 90.1 MHz PI:3200 (Very good qualityy PI dectetion) - Radio Seyhan from Turkey is the only station in FMList - but at the high end of the band.

Couldn't this have been 91.0 MHz? In which case it is most likely Radio Jug from Albania.

73, Janpeter van Dijk

How "wide" is your tuner David because in May there were many reports of PI: D2DE on 88.4 and you are mentioning 88.3 >

88.4 1407 MNE Radio Prva, Ulcinj/Mozura (UL) D2DE RADIO___ PR______

But maybe it already solved by Janpeter?

Ruud

Hi David,

Here's some tips.

> 17:14 88.3 MHz PI:D2DE PS: none

This is MR 1 - Radio Skopje from Macedonia. Several sites are listed for this QRG.

> 18:01 88.8 MHZ PI: E021 PS: Adv----- / --ve------ / Alicante. PTY: Religious talk. I would say this is Radio Adventista, Alcante

Yes, Adventista Alicante.

> 17:45 ---- MHz PI: 5359 PS: --W*GEN

Radio Alfa Due New Generation from Italy. Without the QRG I can't give you the location.

> 17:59 ---- MHz PI:5145 PS: RADIO_-- / --UR----

This is the PI for Rete Sport from Italy. But the PS does not match and without the QRG this is difficult.

> 18:36 90.9 or 90.1 MHz PI:3200 (Very good qualityy PI dectetion) - Radio Seyhan from Turkey is the only station in FMList - but at the high end of the band.

Couldn't this have been 91.0 MHz? In which case it is most likely Radio Jug from Albania.

Hi John again,

> I have also felt much more confident regarding the tx sites in Italy since I started using this new video method. Patterns become much clearer due to the larger numbers of stations being caught and logged. I may still get some wrong of course so any corrections are gratefully received.

I noticed that you have a different method now John. The disadvantage for us other DX-ers is that no red lines are visible from your location anymore. So if everyone of us starts doing this, the Sherlock map will remain empty.
But I am not trying to convince you to refrain from doing it this way. On the contrary, I am considering doing it myself. However, my confidence in computer technology is so low, that I am having this nightmare of a great DX session, when finding the recording won't play afterwards. And by that, missing out on the whole lot. I would probably be throwing my computer out of the window if that happens :-)

Well Janpeter, this had occurred to me, so you will see I have always started logging at the beginning of an opening so the paths are visible. Once the band gets busy I hit the record button in Bandicam. I decided to give this a try because once one Es station is coming through, the chances are that several other's are too, so I began to wonder how much was being missed. There is no point in using this method during the slower openings.

I have also made a point of alerting the group once an opening kicks off, no matter how small. That didn't go quite according to plan this evening. I had an email alert ready to send concerning a brief opening to the Canaries. I was doing several things at once (as usual) and hadn't realised I did not press "Send".

I have the same fears regarding modern technology too. Yes, you are quite right - it will let us down sooner or later. But I think that the great advances technology has made for us more than compensate for this.

It really isn't about logging more. It's about missing less.

Regards.

John

ACTUALLY, I WAS NOT not surprised, even though
this appears to be my first "confirmed " African in
Es+MS.
And my distance track record, as to MS involved.

The Es formation seemed to be conveniently stuck above
eastern France // NW Italy,
and apparantely a meteor scatter carried the signal on,
from above east of Germany // westernmost Czech.

LAST AUTUMN, I had for instance this Libyan beyond 3.000 km, obviously also by
Es+MS,
but I kind of ignored my multi-mode MS, until I
had many enough cases and say fool-proof
evidence. It is a pity though, they always are of very short duration.

As to MS+MS, double-hop, then. I would not count on that being possible,
even in theory. Too far-fetched, too hypothetical, I reckon.

UNFORTUNATELY, MS it is the conditions has turned into, for us in Finland.
Since June 15th, practically no Es at all over
here. Just some vague, rapidly wondering flashes.

A good thing though is, you guys over there in
the south seem to have Es openings.
It always is interesting to follow the activity on the bands.

Also, there always pops up useful information for us in the north, too.

Hi Janpeter,

Thanks for the identifications. As I've stated in previous posts I have found that the Sony ST-311 can be set to auto-scan through it's presets by setting tuning to "preset" and Tune mode to "auto" - then moving the tuning knob clockwise causes it to go through every preset continuously. It stays on a weak channel for 1 sec and where a strong enough signal is present for 4 seconds which is more than enough to capture PI, P:S, ECC PTY and sometimes RT/A. All of which is captured by RDSSpy to a log. So I then can hunt FMList to see if I can match the QRG. If the signal is strong enough the PS is captured into the preset memory by the tuner, which also helps.

With regard to PI:3200 - you are right I should have typed 90.9 or 91.0 - I worked out the frequency because I received CiccioRiccio on 91.6 - the tuner had locked the PS *CICCIO* into the preset. So counting back 3-4 seconds pin-pointed the likely QRG. Radio Klan on 92.9 was also received a minute earlier so making Radio Jug from Albania a near certainty.

It takes a long time to go through the log after a decent opening but it's adding a number of new stations to my log and more importantly showing how many stations come through strongly - but only for a brief period, and how extensive the opening is geographically.

So with the info you have given me I shall add a couple more to the list.

Rgds

David

Hi Ruud,

My tuner bandwidth is sufficient that a strong signal on 88.4 could give a PI code when the radio is tuned to 88.3 so your suggestion that it could be Radio Prva on 88.4 is possible. This is one of the problems with RDS - set the tuner bandwidth too narrow and you miss marginal signals but set it wider for marginal signals and strong ones can come through from adjacent frequencies.

I'm still hoping someone may have a suggestion for Pi Code FF11 - first though being it is Romania as use PI codes starting with FF

Hi John,

two small suggestions.

Concerning 100.0 at 1746, I see that the PS you've received contains the telephone number of Radio Eco Sud (http://www.radioecosud.it/index.php/contatti/direzione) which broadcasts also on 100.0 (listed tx).
So, it seems like Radio Eco Sud have turned his PI to 5340.
En fact, during the entire opening you haven't heard any tx from Romagna: this reduces the probabilities you've heard Radio Gamma.

Concerning PI 5158 you've received on 89.4 at 1801, I see on Radio Mater's frequencies page, that they use this frequency for Eolie Islands and part of the province of Messina
http://www.radiomater.org/it/frequenze-mainmenu-40
http://www.radiomater.org/it/frequenze-mainmenu-40

Unfortunately, this frequency isn't listed on fmlist.

Hoping to be useful for you....

This was really interesting, the I didn't realise the border actually goes through holywell hill (transmitter site) pronounced Hoe-lee well not Holly -well as i was wrongly pronouncing it

93.6 must be huge in Stroke city (L/Derry)

maybe even better than 93.1? perhaps someone can comment?

was Holywell hill largely for the 6 counties like Cleremont Carn apparently was?

sorry for the late reply
it definitely used to happen, Crimea I think had some, I say listings years ago top end of the band iirc

where the oirt tx was fed from the same link as the CCIR tx or from the CCIR tx no one bothered to filter out the RDS signal

although I once got a PI code off Kossuth Radio I think it was an accident at their end (03AD)
all sorts of tones can accidentally trigger the RDS detector

in 1992 me and a friend were messing around with one of those walky-talkies on 49.86 MHz we managed to trigger the "traffic" flag on my friends dads car radio which was tuned to the harmonic on 99.72

someone who wrote to BDXC's communication was playing back recordings of FM stations through an I-trip and managed to re-transmit the original RDS!
how did they do this? I've tried and can't do it!

sort of related:
Russian Engineers thought it fun to put RDS on TV sound, so I once got RDS off the Smolensk R5 audio on 99.75

Yes Holywell would have been sited to provide coverage of Derry. If I remember rightly the Donegal transmitters are well received right over into the glens of Antrim.

Where I am in Fermanagh the strongest TX site is Truskmore in Sligo even more so than Brougher.

The Crom Castle mentioned in part three of that show is a stones throw from me.

Paul

Hi David,
ROU should have PI code starting with an "E" but the national radio's are using F strange enough.
F is according ITU for BIH in that part of Europe so maybe you have to look in that country?

Quite a big opening - both to the Balkans and to N Africa - I got plenty of Arabic stations with some appearing on more than one frequency. Not a single PI code and not many internet streams working.

Do Algerian stations share programmes?

I had 90.4 and 91.2 with arabic music/chanting with a very small lag between them. (I love the dual VFO on HDSDR!)

I appear to have three programmes sharing a news broadcast - on 91.8, 92.6 and 97.2. Arabic - male in studio then reporter of phone link.

Then on 90.9 I had french - and just before I started recording (typical!) There was a programme id - I think it was SNRT (Chaine) International - but that is not listed on FMList. I got the last word defintely but not sure f they said "Chaine".

I've a number of recordings I can extract - but has anyone any ideas?

And I also logged my favourite radio station - I just love seeing * B U M * on the display - and BUM BUM is even better. (English humour folks - and don't ask about the Swedish toilet paper)

David,

I was going to ask the same question. At least 4 frequencies with the same Arabic programme. The delay between frequencies quite noticeable on the elad. One of the frequencies didn't have an Algerian listed on fm list, all the others had different stations listed. If they were algerians they must share programmes.

Analyzing the recording I must say it is really a turkish station not known
to me.
The proof is the radiotext: "MGY RT, RDS Radio Text Test". MGY is a turkish
company providing RDS encoders.
This should be a local station. The name of the station and also the
content points to a religious station. But there is nothing officially
licensed with that name.
I will keep looking for that station and add it to FMLIST
Kurt

Thank you Kurt. Very helpful. I can't wait to find out the location.

Best wishes.

John

** Personal Skegness 'First'

After posting yesterday evening's DX session to Vimeo, DXer "Thanos Thessaloniki" in Athens reviewed the video and suggested several stations, some of which I was aware of, some I had clearly overlooked due to the lack of RDS. These additions are included above and are quite clear in the video. Many thanks Thanos.

For FM List: The old broadcaster ERA are still listed, but Thanos uses the new "NERIT" abbreviation, "", information from Wikipedia: http://en.wikipedia.org/wiki/Hellenic_Broadcasting_Corporation. NERIT website: http://www.nerit.gr

ERA2 on 90.0 now appears to be NERIT3, the classical music service, but is still listed as ERA2 on in FM List.

It's all old news I'm sure but just to post as an update.

Good DX!

Hi John,

5 more suggestions after listening to the "italian part" of your recordings

89.4 1928 Radio Radicale - Martina Franca/ Masseria Trasconi (ta) mixed with Kiss Kiss Italia
87.8 1933 Ritmo 80 - Corato/ Contrada Murgetta (ba) Vocal Id
92.5 192955 RDS - Alberobello (Ba)
94.2 193044 RDS - Molfetta (Ba)
94.8 193100 RDS - San Marco in Lamis/Monte Celano (Fg)

The identification of this 3 RDS transmitters has been possible through your identification of RDS on 88.3 at 1932.
En fact, P!nk's song is the same and it's no more an heavy rotation tune.

Cheers,

Franco

Unexpected - also ALB, BIH and SRB - for me from 2150 to 2216UTC. Today I've got 216 entries on the log from the scanning radio to sort out - lot of them will be multiple scans on the same station which in itself gives an idea of the scope of the opening.

Lunch time was an hour long very strong opening to Tunsia with a couple of Algerians thrown in, Tea time was mainly Italy with a couple of Polish stations on Band 2 and a couple of BLR / UKR on the OIRT Band.

Maybe things are looking up for the ES season

A superb morning here and possibly the best so far this season. Very little Italy but lots of Serbia, Bosnia, Croatia, Bulgaria, Hungary, Romania, then Spain and Portugal, with a bit of south-east France.

I have well over two hours of video to go through, not to mention yesterday evening's marathon. One day!

Good DX!

John

32884. OIRT Reception - double hop?

Yahoo group: SkywavesDX (2014)
Date: 2014-07-02 12:59:10 UTC
From: davebunyan@...
Topic: 32884 Message: 32884

Some interesting reception on the OIRT band at fairly long distances

Es 1215 66.98 RUS Radio Rossii, Nizhneye Ustye (AR) id from web - 90% after several comparisons with UKR Radio 1, 2535 in Sittingbourne (G) 0.1

Es 1218 67.16 RUS Radio Transmit, Cherepovets/RTPS (VO) tentative- rock and roll music - only tx for this frequency (not R Rossii), 2470 in Sittingbourne (G) 17 h

Es 1225 70.85 RUS Radio Rossii, Ibresi/RTPS (CV) tentative - female talking - weak but appeared to match web stream, 3045 in Sittingbourne (G) 17 h

I've got a recording of one I think is Radio Transmit for confirmation or otherwise

I also have a recording of the station on 70.85 - but it is very weak and is more noise that radio station - maybe someone will be patient enough to listen to it and give an opinion.

Hi Jurgens

Yes the frequency is very precise in the HDSDR - easy to see the peak within a kHz or so - so definitely 70.85 as showing in the file name given by the HDSDR software. But with such a weak signal it was difficult to convince myself it matched the web stream.

Clear your browser's cache regularly. This often slows down Chrome but much less so Firefox. Once the cache has cleared everything speeds back up to normal.

Cheers

32897. Re:: OIRT Reception - double hop?

Yahoo group: SkywavesDX (2014)
Date: 2014-07-02 17:07:35 UTC
From: davebunyan@...
Topic: 32884 Message: 32897

As an update I've looked at the comments to my question, propagation paths on the FM List visual logs and come to the conclusion that the station on 66.98 was more likely - Khvorostyanka at 3243km bearing 68 degrees from me.and I had three other stations on the same bearing

The station on 67.16 is identified by Victor as Radio Rossi - and I think it comes from Sergach 2947 km bearing 63 degrees from me and if I'm correct that 70.88 was also R Rossii then Ibresi at 3045 km bearing 63 degrees fits the pattern.

I just wish I could be 100% certain.

I've left the original logging of the station on 66.98 - which has a bearing of 47 deg from me - so if anyone is interested they can see how it doesn't fit with the propagation pattern.

NRK P2 heard on 88.3 and 88.6. Also after NRK P2 faded out on 88.3 it was replaced by Madonna's 'Vogue' via Es with the typical Es fading characteristics. It turned out to be BBC Radio 2 so this was almost certainly Bressay in Shetland.

Good DX.

From: Jim Smith G0OFE
Topic: 32911 Message: 32923

Yes, first decent opening to Norway I have had - first time I have logged it via Es, though I have only logged two stations.

I have jotted down a lot of PI codes and frequencies, but for all but the two mentioned, they were almost all one big TX (say 50 to 75kw) plus several, perhaps many flea powered TXs, 10w, 40w, maybe 100w in one or two cases).

Logic suggests that is the big TX I received, but what is the general view with logging them? Do you ignore the tiny candles and log the searchlight in such cases?

Jim.

IMHO If the powerhouse and the flea power are from the same general area I think you have to log the powerhouse. If they are separated by a considerable distance and the opening is to the flea's area then logging the midget would seem reasonable.

From: davebunyan@...
Topic: 32911 Message: 32928

Personally I've stopped making the assumption that the stronger station is the one received - I've had too many stations 100 watts and below. But it also depends on the general propagation - if reception is from a well defined small area - it helps to pin down the more likely tx. It means that I can't log all my reception.

It's worse when you get two or three high power transmitters on the same frequency from the same country.

Having said that I really don't think I received the 1 watt Radio Maria transmitter on 88.0 from Randazzo (1864km) even though I had other stations on the same heading and similar distance - I would settle for the slightly stronger 2.5kW station in Augusta (1923km).

Midgets do get through, such can be the power of E skip, so never assume it's the higher powered station, unless there is good reason to assume that.

Just got Joutseno on 88.7 nice and strong - so if Ilkka is monitoring he could get Wrotham and Dover transmitters - try 96.7 for BBC Radio Kent. Heart 102.8 / 103.1 are a couple of others

BFBS Bangsberget, 88.4 - listed 50 watts!

To make things really simple, this is mixing with Algeria!!!

What are we to make of these strange pairings today Tim?

I am looking forward to a possible France and Turkey!

John

Hi David,

Thanks for the kind notice.

Es always does not work in a duplex, or a 2-way manner, that is one
of the propagation mode's curiosities. I am currently trying to pull
up more stuff from Spain...

I suppose you mean Joutseno Yle 1 on 88.0.

32979. A good opening today

Yahoo group: SkywavesDX (2014)
Date: 2014-07-03 16:14:23 UTC
From: Privat Patrice
Topic: 32979 Message: 32979

Hi

a good opening today but, alas, 3 unsolved mysteries, I'm glad if you can help.

The E's came mainly from Algeria, Spain and Greece/Albania.

Here are my 3 riddles :

94.7 RDS '_Mindalia_' '_GESTIONA_' Spanish language at the time.

88.7 English language RDS '_SPECTRUM_' most likely expat radio for UK residents in Spain or Greece

87.5 RDS '_ILLA 87. _' '_oldies music_'

Here are the certified new ones :

88.0 '_Mgaparty_' Megaparty Benitatxell PI 1000

95.2 Athens DJ vocal ID Greek mix

93.2 '_DIAL_' Cadena Dial, Alicante

93.3 Greek talk, possible ERA Santorini

96.7 ORA News Tirana , Albania (taped on video) numerous mentions of "shqiperia"

88.9 Spanish, many commercials with addresses in Murcia, Radio Marca, Sierra de Carrascoy

many thanks, lads !

Patrice, Beauvais, JN19bk

32980. Personal Best

Yahoo group: SkywavesDX (2014)
Date: 2014-07-03 16:33:46 UTC
From: John Faulkner, Skegness
Topic: 32980 Message: 32980

I think today has been the best day of Es I have known. I just added up the number of countries (from memory) and I counted 25. There may be others I have forgotten or have not accounted for. Calculations are based on the countries as they are listed in the FM List database. There would be one or two more countries had I calculated using the DXCC database. I forget which islands are classes as separate countries, but I suspect Corsica, Sicily and/or Sardinia might add to this number. The Aaland Islands probably came in too. The log will take some time to compile and I will be surprised if I get it done this week.

The day is long from over yet!

Good DX!

John

It is very obvious. Whoever controls the Es is a football fan. Yesterday and today are down days with no matches in the World Cup. Hence we have Es going through the day. Tomorrow I expect them to be turned off for the quarter finals.

June was hopeless for Es. Then the last few days has gone through the roof! This is such a sudden and dramatic change that you'd think there MUST be something concrete and easily visible which tells us why this happened.

Anybody?

32985. Nice Irish opening today in Finland

Yahoo group: SkywavesDX (2014)
Date: 2014-07-03 18:07:30 UTC
From: harriku@...
Topic: 32985 Message: 32985

Fun to read yesterday about tired DXers after big opening. Seems to have been a really good one with close skips! And it seemed to continue today and luckily we got it also here.

In Finland the last two weeks of June were the worst ever on Es - and also the coldest weather ever (even snow). Almost nothing was heard via Es after 15.6 (and not so good before that either).

Today we finally had France, Italy, Ireland an some UK!!! Around two hours MUF 108 to Ireland!

I heard unknown parish radio with a Mass on 108.0 MHz. This might be Tuam parish (Cathedral of the Assumption) which broadcast on this frequency, but of course this can be some else.
http://tuamparish.com/information/parish-radio
http://tuamparish.com/information/parish-radio

Last winter I identified well over 100 different Irish church radios (=parish radios) on CB 27-28 MHz. I have over 40 written letters back from the parish priests, so this was really nice one to hear (I will make a web-page of them. Here also thanks to Paul for help!!)

Perhaps this continues tomorrow...

I think it may have something to do with this:

http://www.theweatheroutlook.com/twocommunity/default.aspx?g=posts&t=13276

If you Google 'noctilucent clouds' under the News category there are a few recent stories on there.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

32988. Re: [SkywavesDX] Nice Irish opening today in Finland

Yahoo group: SkywavesDX (2014)
Date: 2014-07-03 18:34:22 UTC
From: ilkka suni
Topic: 32985 Message: 32988

Hi Harri,

You are right, it is good to read about DXers being exhausted by Dame Esmeralda. It also felt good to see that many Finnish DXers on the lines, all day long.

I was particularly happy with the couple of spanish stations. By now I am almost convinced, the RNE Bunyola [BAL] on 90.1 last autumn, was a true MS-hop, multi-mode enhanced.

I also got confused today. This Spanish-speaking broadcaster on 90.3, and I wonder if you guys could help me out.

UNID:
1321 UTC... 90.3 MHz in Spanish.

Sounded to me, as RNE programming but, I had problems with the internet connection and could not temporarily run live streams. I am certain about the frequency, as my Yamaha's 2x53//2x80 kHz Muratas are steep enough to tell the frequency correctly.

Thanks in advance if you folks can help me on this one.

BTW, I am counting on us having some more Es on Friday.

Twitter: @Jim_G0OFE (for radio stuff) @Jim_AFCB for footy, weather and life in general)

From: SkywavesDX@... [mailto:SkywavesDX@...]
Sent: 03 July 2014 16:34
To: SkywavesDX@...
Subject: [SkywavesDX] Personal Best

I think today has been the best day of Es I have known. I just added up the number of countries (from memory) and I counted 25. There may be others I have forgotten or have not accounted for. Calculations are based on the countries as they are listed in the FM List database. There would be one or two more countries had I calculated using the DXCC database. I forget which islands are classes as separate countries, but I suspect Corsica, Sicily and/or Sardinia might add to this number. The Aaland Islands probably came in too. The log will take some time to compile and I will be surprised if I get it done this week.

The day is long from over yet!

Good DX!

John

Hi Reijo,

I would not know if you meant my unidentified spanish, or one by
Harri. Anyway, thank you for your effort.

Here is the sample of the reception. Unfortunately, the signal
disappeared very soon. Also, the audio keeps fading as I utilize a
cassette tape deck and these brand new yet lousy Maxell UR ferro tapes:
https://app.box.com/s/b4e8mujnmr1tw3qgd19o

And, as I mentioned, the frequency is 90.3 MHz.

No - the research seems to suggest a 2-3 week lag. Hence Nick's post about the NLC news items from 2-3 weeks ok seems appropriate.

Regards

Stuart

Whether or not they relate to SpE or not the photos are most impressive - a lot beteer than ones I've seen in a newspaper article sometime back. Worthy of wider publication.

Everything is quiet right now (1235BST) so time to catch up on the logs from yesterday

More DX!

Thank you Dave.

Photography is not my strong point, but I have a good camera ;O) I use a Nikon D7000, but my main Nikon lens is broken (dropped the camera on concrete!) and so I am using a Sigma 300mm lens as a replacement - no good for general photography.

I took some photos of the "Nautical Twighlight" on the shortest night, and at the darkest time. I will add those to my blog later if I get chance.

Cheers

John

Spain half way up the band but none of it producing RDS. It's strong enough to, so it's either multipathing or there's lots of co-channel interference. Sounds like the latter.

Good DX!

33030. Toyota W53843 Panasonic car radio – muting when turning tuning knob.

Yahoo group: SkywavesDX (2014)
Date: 2014-07-04 19:42:55 UTC
From: kpc850@...
Topic: 33030 Message: 33030

A friend's Toyota W53843 (made by Panasonic) car radio mutes with manual tuning even though it has an analogue-style tuning knob.

Pictured here:

http://www.boards.ie/vbulletin/attachment.php?attachmentid=313394&d=1404496317

Despite having an analogue style tuning knob (with 0.05MHz FM steps) , the audio is muted for nearly a full second after any increment of the manual tuning knob - this is obviously not DXing friendly unlike some German car radios with a manual tuning knob I have tried which do not behave like this.

This happens on both its FM and AM (MW only) bands (surprisingly there is no LW coverage)

This muting would be understandable if it only happened going between band edges - over 108.0 back down to 87.5 MHz but not otherwise.

I realize this is a long shot but is there any feasible way (or even a hidden function?) to disable the muting during manual tuning ??

Another question. The AM(MW) steps on this radio are 9kHz increments only – any hidden way to do 10kHz or even better 1kHz steps ? (if one wanted to try transatlantic MW DX during the winter!)

33031. Greece Radio Messina 93.0 - PI Code 10F5

Yahoo group: SkywavesDX (2014)
Date: 2014-07-04 20:11:57 UTC
From: davebunyan@...
Topic: 33031 Message: 33031

Just in case anyone else has picked up this pi code today - I've tracked it to Radio Messina. "Google" is pretty neat - in the RT/A section of the RDS data a phone number appeared - 207220225163. So I typed it into Google and up popped the web-site for Radio Messina 93.0 FM with the phone number in the summary!

I've made it a point of including the RT/A data in my logs every since I saw, on SDR#, the full location of an RAI 1 station appear in the RT data.

Only problem is - there are three txs on the same frequency - so close I've logged it against the middle distance one.

Rgds

Hi, this is not an answer to your good questions but ;)...hmm. Always, when selecting the car do test FIRST the radio behaviour DX-wise, after that the other "not so important" things. Radio first, then the other issues. Of course all factory installed radio panels can be replaced with better audio capabilities both soundwise and "dx-wise", all can be replaced.
Conclusion<: do not select Toyotas unless you test the radio first. PS. My Opel's Bosch's/Blaupunkt radio (model 2007) DSP radio is very good, no muting while scanning manually, but haven't been doing online scanning while driving for a while. It is there, still.

Hi Hannu,

I have kept in storage this old Sony XR-7300. It
is of the year 1988, with "only" a 4x30W separate amp, and line in-outs.

No RDS of course, but such an excellent
DX-machine, and a true hi-fi amp. Many were the
occasions I noticed, the XR-7030 beat the
hootenanny out of my Grundig Satellit 600, even
the Grundig with an 3- or 4-ele yagi.

By far, the most sensitive car radio I ever had.
Never took the time to replace the IF filters
though, as the radio as its basic is such a
performer. Besides, the tape deck is one of the
best ever made for car use, as I recall the
frequency response reaches 19.000 or 20.000 Hz.

By now, the radio has been on the shelf for some
20 years. Maybe I should put her back in duty, one day,.

73, ilkka

Hey Paul,

It is a pleasure to help others where I can. This is a part of the hobby that I enjoy and gives me the opportunity to do something DX related even when conditions let me dowm. Or in case I let conditions down, as was the case the past days. I still can't believe not having been able to be in the shack the past few days.

Here's hoping for a repeat. I am hearing EI hams on six....

That's extremely bad luck. It happens to us all. At this time of year I absolutely dread having to be away when there is a big opening somewhere. I just found out I may be going away for a few days next week. Will I be lucky and not miss a thing? Or will I regret missing the day when double hop from the Middle East was awash across the whole of FM?

I feel I have had more than my fair share of DX this season when many have been struggling. I have been just at the right side of the edge recently and caught lots of DX, but I know other DXers inland were not getting a thing. So I have been very lucky in some ways. But that's DXing for us ALL. Some you win, some you lose.

Good DX!

John

33046. UNID 97'4

Yahoo group: SkywavesDX (2014)
Date: 2014-07-05 16:02:48 UTC
From: elonda@...
Topic: 33046 Message: 33046
Attachments: 2 described; binary payloads are missing from this source WARC

Catched the 28th-6-2014 from Son Servera (E-BAL-ML) on 97'4 during an tropo onpening to french regions of Provence and Côte-d'Azur. I received that one instead of RTL de Niza, while radiates pop music, the PS was "__CLUB__ __CLOS__".
Any ideas?

33047. Wigan log 03/07/14

Yahoo group: SkywavesDX (2014)
Date: 2014-07-05 16:47:05 UTC
From: Andrew Webster
Topic: 33047 Message: 33047

Well what a day this was I only had about an hour in the morning and on my return at lunchtime the E's were still going strong.

A very nice opening to Scandinavia for a welcome change and some of my locals and RSL's just sunk into noise and replaced by DX.

Hi Paul,

The 94.1 is norwegian alright. I'm sure, Arvid for instance can
determine by the programme content, which programme channel by the NRK.

The 95.0 clip for sure sounds SR P1. On the clip, there is a public
discussion forum by politicians.

A peculiarly funny thing just happened.

I was testing the car radio on one of my remaining cars, and the car drove over a 195/65-15 tyre. Now the tyre on its alloy wheel lies beneath the front of the car, hoisting the whole car, and I suppose I should dial for a lifter.

Never happened to me, before, nor to any of my cars. Then again, s*it happens. Lucky enough, I have got multiple lifts right at home.

Hi!

94.1 is no doubt NRK P1 Sprinklerfjell in Vestfold county.

95.0 is SR P1

Remarkable. This station has been reported with the same PI, but with __NRJ___ as the PS. I wonder what is going on here.

Hi! It’s NRJ, not Rockklassiker. Rockklassiker has cut down the number of frequencies due to high costs and instead given some of them to NRJ. 107,5 Stockholm and 107,8 Göteborg are now dead and the frequencies are given back to the authorities.

Commercial radio ist not allowed to have higher power than 1kW ERP but SR is allowed to use 60kW ERP.

Rockklassiker has only 10 stations left.

33062. China received in Finland on FM - 92.9 MHz

Yahoo group: SkywavesDX (2014)
Date: 2014-07-06 12:17:01 UTC
From: harriku@...
Topic: 33062 Message: 33062

On Friday 4th July 2014 Markku Sollo in East Finland received Chinese FM-station on 92.9 MHz (time 05.26utc). First time ever in Finland.

According to heard advertising It is tentatively tracked to be 929 Private Car Radio, Urumqi.
The clip is now on the run to be tuned with Chinese language speakers.

Distance 4156 km (So it is not Finnish distance-record).

Another Chinese was audible almost at the same time on 93.1 and the language is identified to be Mandarin Chinese which sounds very different than Chinese on 92.9 MHz.

Markku heard last summer India on 92.7 MHz, Big FM. It was also the first India-logging in Finland.

Thanks for this info I have looked at 90.3 and there is a clear ID sounds like (energy) which I presume is NRJ I missed that on the day.
I presume the PI has not changed yet so the question is will they change it.
I will check the PI for Radio City later.

33078. Antenna design

Yahoo group: SkywavesDX (2014)
Date: 2014-07-06 16:26:43 UTC
From: Julian Hardstone
Topic: 32469 Message: 33078

Paul - I'd also be interested to see any work on this
I suspect the F/B ratio would be much lower than for a dipole + reflector but that would be much less important for Band I, where you only need is to identify the direction of a signal. What we need is sensibly flat Gain and SWR
I tried to model a dipole + reflector in MMANA-GAL and initially it looked promising, but I now realise you can't optimise element spacing, only lengths, with this s/w so I can't take it any further forward in a sensible time
I wonder if anyone would like to try to model such an antenna - I'd settle for SWR < 1.5:1 with a gain variation < 3dB over a B/W of 8MHz centred on 70MHz, but most people would be looking for 30MHz centred around 60MHz
- Julian

Sun Jun 15, 2014 6:15 pm . Posted by: "Paul Logan" paulloganradio

Hi all,

I was looking at an antenna design in one of the UK radio magazines - an HS Publications design. A wideband dipole, with closely spaced director.

If I am right I assume the dipole part of the antenna is cut to the lowest frequency of interest and the director is a 1/2 wave at the highest frequency.

Not sure how the spacing of the two is worked out - anyone know?

Something I might want to play around with.

Anyone used this kind of close space director idea to build multiple element antennas for FM or OIRT? Or lower freqs? if so, how did they work out

Any info would be of interest.

Just to explain this Rukkas-Antti, in case somebody wonders.

He is an iconic finnish salesman, of fairs and marketplaces some decades ago.
I recall the time, I met him in Hartola, the year 1984.

I'm not sure I recall right, was it him that warned me of a man with
a gun, or was they the couple from Sweden that warned me. The audio
tape with the duplicates are somewhere.

I still owe those people a big thanks. The possible forecoming
incident might have been harmful to even my DXing.

** Personal Skegness 'First'

July 2nd resulted in a big logbook. As with the previous day, my log was made after playing back the video recording of the day's live listening an adding the stations to FM LIst accordingly. The Spanish loggings were not simple as many parts of Spain were open simultaneously, making logging of the precise transmitter impossible in some cases. Those catches were left out.

Sud Radio was received on 102.0 and I deduces that the transmitter site was the 100 watt Vicdessos 1, as opposed to the usually received Toulouse transmitter. Vicdessos 1 was inline with the reception area at the time and other transmitters were received from that vicinity. Reception of the Toulouse area was not apparent at this time, so my gut feeling is that Vicdessos 1 is the correct transmitter.

For those who prefer the country/frequency ordered lists:

Bosnia & Herzegovina

Hi All

Still sorting through a few unid's but here is what I have so far:

http://www.fmlist.org/fm_logmap.php?datum=2014-07-03&band=ALL&hours=0&omid=1419

I also received TV audio on 91.75 @ 15:49z (Eastern Europe Channel 4?)
anybody know what the most likely TX candidate is for the audio?

Hi John,

A great list, nothing less!

> 104.9 0843 BUL UNID, ? 84D9 _H_I_T__

I think (99% sure) this is Hit Radio from Pozarevac (SRB)

> 106.2 0844 ? UNID, ? D000 RA____L_

And then it is likely that this is Radio Pozarevac. This one is a bit less likely, since the PS does not match.

> 90.5 0851 BUL UNID, ? 80EF 90.5MHZ_02-Jul__

This is Radio Vrnjacka Banja, Vrnjacka Banja (SRB)

> 89.0 0914 ? UNID, ? C001

Hrvatski Radio Valpovstina, tx Valpovo (HRV)

> 87.9 0937 E UNID, ? E233 Test tone

This is the inactive network of iCat FM. Most station have been radiating an empty carrier for months.

> 96.9 1003 E UNID, ? E144

UGT Radio Castilla La Mancha, tx Chinchilla de Monte-Aragón (CAM-AB)

73, Janpeter

Good point :-)

The measured frequency is 91.739306

I had RMF FM booming in from Siedlce/Aosice also at the same time

It sounded like a drama (2 men talking) maybe with someone playing snooker
in the background and then it went to an ad break with a max factor advert

Andy.

I will check the PS on my video. It might be a corrupted PS name. Would
make sense.

So these are what the test tones were. There were a few around and I was
assuming they were Algeria.

I have videos of all these and will upload them soon.

Cheers

John

Topic: 32469 Message: 33088

Hi,

I thought I'd posted something earlier about this - but obviously not. The wideband dipole idea is used in the Antiference FM aerial range, but with the shorter parasitic element about 2.5 inches / 60 mm below the dipole itself - rather than in front of it. If you model this in 4nec2 you can see that it has virtually no directivity - it's pretty much a dipole but with a much wider bandwidth than a single element. Modelling the Antiference 5 ele dimensions with the parasitic ele in front you end up with around 15dB f/b (and f/r) at the low end - rising to 20db or more at the high end and with a reasonable SWR at each end. BUT the K6STI 5 ele small yagi has a f/r ratio of 20dB across the band and f/b ratio slightly higher - and it works very well.

If you want an OIRT version of the K6STI just multiply the dimensions by 1.419 - the 2:1 SWR limits are 61 to 76 MHZ with the same sort of f/b and f/r ratio as the published version. boom length is 7ft 9inches or just under 2.4 metres. (I haven't tried optimising it was strictly a theoretical excercise - no way can I add such an aerial where I am.

For my version of the Band 2 yagi I used half inch elements for everything except the dipole - as this size was a lot cheaper. I protect the coax cable connection with a small black ABS box - which isn't waterproof but stops the rain. The slight difference in the heights of the Staauff clamps for the two diamters of element means they line up perfectly when the thickness of the ABS box is taken into account.

Note: my version looks exactly the same as the photo of Paul's commercial version on the K6STI web site

Rgds

David

From: davebunyan@...
Topic: 32469 Message: 33089

I should have added that modelling just the dipole+parasitic element in front of it shows the directivity of a dipole. Also if you make the shorter element the driven element it just doesn't work.

Although the gain would be lower I'd like to see a design for a wideband log periodic array covering 45-110 MHz - on a boom no longer than around 7ft / 2.2 m (the most I can accomodate. That way I'd get the 50MHz amateur band, OIRT and Band 2 FM.

David

33098. July 2nd 2014 FM Log - The big one!

Yahoo group: SkywavesDX (2014)
Date: 2014-07-07 10:55:36 UTC
From: Paul Logan
Topic: 33098 Message: 33098

Hi all,

well this is the largest single day log I have ever posted. Over 400 logs marks July 2nd out as having been remarkable here.

There were several openings, one delivered my first ever confirmed signals from Sicily, which I really enjoyed.

The meat in the sandwich arrived in the evening though when two high MUF paths opened to the east, one centred on 90 degrees the other 105 degrees. The log map here clearly shows this http://www.fmlist.org/fm_logmap.php?datum=2014-07-02&omid=256&band=ALL

This produced complete mayhem with multiple stations on each channel. Lots of signals from HOL and BEL (Both rare here) were present but were at lower signal level than more distant stations which won out. The German logs here, including many low power stations are the best I have ever received.

This kind of event is why I love FMDX. I will take this over more exotic stuff, most days. In fact, thinking about it BEL, HOL and western Germany ARE exotic to me!!! Many of you will notice some of these stations from your own tropo records.

Here is (some of) what was heard.

Lisnaskea, 07w26/54n15

33099. FMLIST OIRT FM stereo

Yahoo group: SkywavesDX (2014)
Date: 2014-07-07 12:46:10 UTC
From: Günter Lorenz
Topic: 33099 Message: 33099

On this band most stations are transmitting in Mono. But also both CCIR stereo (19 kHz pilot) and Polar stereo (31.25 kHz pilot) are used. When using an SDR for Dxing, the pilot frequency can be identified.
It is now possible to store "Polar stereo" in FMLIST, by using the letter "p" in the mod field.
"s" will mean CCIR stereo.
This is by suggestion from a FM DXer from the Netherlands who is already providing some notifications on this.

73,
Günter

33100. Re: [SkywavesDX] FMLIST OIRT FM stereo

33112. Re: FMLIST OIRT FM stereo

Yahoo group: SkywavesDX (2014)
Date: 2014-07-07 14:41:17 UTC
From: Julian Hardstone
Topic: 33099 Message: 33112

What about the CCIR/Zenith stereo of R Rossii 66.74 (Galich?) which I was hearing most of Thusday? When my rx switched to mono during qsb the audio became very quiet, like they had the L + R channels out of phase :-[

Hi Paul,

Well, I have been around for a while. But I have never seen anything like this, incredible! Very well done. Granted, I am still awaiting John's log for this day.
I will let you know when my next trip abroad is, so you will be prepared for another big one :-)

73, Janpeter

Hi everybody,

Nicola is a beginner of FMDxing who lives in Northern Italy.
With his ATS 909 he followed his first Es opening last Tuesday on Oirt band; but unfortunately he wasn't able to identify any signal.
And me too...

He posted some videos on youtube with his listening: so, your suggestions are very welcome

Hi Janpeter.

You have seen my entry for the 2nd. My big one came on the 3rd and I have just started compiling this one from my videos. I doubt I will match Paul's amazing tally, but I can report 136 loggings by 1000 in the morning. I haven't reached the Scandinavian takeover part of the day and this will take some time to go through. With so many little interruptions lately I am lagging behind quite badly, but I hope I will be able to make some good inroads into this tomorrow. If you want to have a look at the progress so far, see http://www.fmlist.org/fm_logmap.php?datum=2014-07-03&omid=2149

From: Paul Logan
Topic: 33098 Message: 33161

Hi Nick,

well I knew something special was happening so I used the Perseus to record chunks of the upper band and tuned around on the elad on the bottom end (I'm not recording on the elad yet)

Every year there is an opening with really outrageously strong signals, well this was two of those happening at once separated by a few degrees. Never really seen the like of it before!

As for stamina. My brain was completely fried afterward!

Paul

After seeing the reports and looking at the maps I tried the car radio as we drove to Exeter city centre at around 9.30 am. Apart from maybe a brief murmur on 87.9, nothing was heard. Perhaps the Es didn't reach this far west. A pity. I did say there'd be a big opening whilst we were away though ;-)

Good DX
Nick, Exeter, Devon

33173. Radio Rossii

Yahoo group: SkywavesDX (2014)

From: Dave
Topic: 33173 Message: 33173

I got 2 ID's this morning on 65.9 and 66.20, first time for me

Looking at fmlist I presume 65.9 was originating from Veselovka and not St Petersburg ?! Which is most likely as both are 17kw apparently

66.02 only entry is from Astrakhan again 17kw, how far would this be ?

Where is Veselovka in Russia also ?

To: tim.bucknall@... FP's Situation Report: Afghanistan in an electoral crisis; U.S. gives up on anti-Castro "prop" plane; China targeted U.S. think tanks on Mideast; Jordan a sitting duck; Israel weighs a ground invasion; and a bit more. If you have problems viewing this email, view it in a browser. Please feel free to forward it to a friend . Foreign Policy situation report The Daily Brief from FP's National Security Channel FP's Situation Report: Afghanistan in an electoral crisis; U.S. gives up on anti-Castro "prop" plane; China targeted U.S. think tanks on Mideast; Jordan a sitting duck; Israel weighs a ground invasion; and a bit more.
By Gordon Lubold with Nathaniel Sobel

Afghanistan is now confronting a full-blown electoral crisis. The election earlier this year had brought high hopes that after years of sacrifice of blood and treasure the country could perhaps get on solid political footing. Abdullah Abdullah, one of the two front-runners and well-known to Washington, seemed poised to win. But in runoff results released yesterday it was his opponent, Ashraf Ghani, who appears to have won the second round. Now Abdullah is claiming widespread fraud, fanning the flames of protests in his favor, and the U.S. is warning it would withdraw financial and security support if either takes office illegally. Reuters this hour: "...Underscoring the magnitude of the crisis, Abdullah said U.S. Secretary of State John Kerry would visit Kabul on Friday. Kerry arrived in Beijing on Tuesday for the annual Strategic and Economic Dialogue. The U.S.-China talks finish on Thursday. Thousands of Abdullah supporters gathered in the capital on Tuesday, demanding their leader form a parallel cabinet and unilaterally assert his own rule - a dangerous move that would further fracture the fragile country. More here.

Reuters' Mirwais Harooni and Maria Golovinna reported last night that the Independent Election Commission on Monday announced that Ghani won the June 14 second round with 56.44 percent of the vote, according to preliminary results. The tally might change when the final official numbers come out on July 22. ...Officials warned this was not the final result, however. 'The announcement of preliminary results does not mean that the leading candidate is the winner and there is possibly the outcome might change after we inspect complaints,' IEC chief Ahmad Yousuf Nuristani told reporters." More here.

John Kerry, in a statement released late last night, who noted reports of a "parallel government" with "gravest concern": "... The apolitical role of the security forces must be respected by all parties. We call on all Afghan leaders to maintain calm in order to preserve the gains of the last decade and maintain the trust of the Afghan people. Any action to take power by extra-legal means will cost Afghanistan the financial and security support of the United States and the international community."

On Thursday, the man nom'ed to become the next ISAF commander, Gen. J.C. Campbell, will appear before the Senate Armed Services Committee to explain how ISAF will transition in the coming months, how he can lead a command that is itself in transition, and how his

experience as a regional commander in the East can help. But for an administration that had hoped to check another box and begin to depart Afghanistan amid so much upheaval in Iraq after the U.S. withdrew there, Campbell's job Thursday defending the administration's drawdown plans for Afghanistan won't be an easy one.

Welcome to Tuesday's edition of Situation Report. If you'd like to be one of our subscribers, we'd love to have you. Sign up for Situation Report by sending us a note at gordon.lubold@... and we'll just stick you on. Like what you see? Tell a friend. And if you have a report you want teased, a piece of news, or a good tidbit, you, send it to us early for maximum tease. And the more shovel-ready, the better. And hey! Follow us: @glubold and @njsobe4.

The U.S. finally gives up on its anti-Castro propaganda plane. FP's John Hudson, who wrote the piece a year ago that raised questions on the program: "The United States officially ended one of the most ineffective and widely criticized programs of the last decade aimed at undermining the Cuban government, the State Department revealed Monday. Foggy Bottom's inspector general released a report showing that AeroMarti, a multimillion dollar boondoggle that involved flying an airplane around Cuba and beaming American-sponsored content to the island's inhabitants, ended in April. Since launching in 2006, the program was plagued by a simple problem: Every day the plane flew, Havana jammed its broadcast signal, meaning fewer than 1 percent of Cubans could listen to its TV and radio shows." More here.

Sen. Robert Mendendez, chair of the Senate Foreign Relations Committee, is seeking an inquiry into the source of claims that led to what is thought to be a Cuban plot to smear him. The WaPo's Carol Leonnig and Manuel Roig-Franzia, on Page One: "Sen. Robert Menendez is asking the Justice Department to pursue evidence obtained by U.S. investigators that the Cuban government concocted an elaborate plot to smear him with allegations that he cavorted with underage prostitutes, according to people familiar with the discussions.

"...According to a former U.S. official with firsthand knowledge of government intelligence, the CIA had obtained credible evidence, including Internet protocol addresses, linking Cuban agents to the prostitution claims and to efforts to plant the story in U.S. and Latin American media." More here.

Who's Where When today - Defense Secretary Chuck Hagel and Chairman of the Joint Chiefs of Staff Gen. Marty Dempsey appear before a closed door meeting of the Senate Armed Services Committee today to talk Iraq and Afghanistan... Pentagon Pressec Rear Adm. John Kirby will brief reporters at the Pentagon at 2pm today.

The U.S. Navy can't meet its funding needs for surface warships and a new class of nuclear attack submarines from 2025 to 2034, according to the service's latest 30-year shipbuilding plan. By Bloomberg's Tony Capaccio, here.

Situation Report corrects - In our item yesterday on Shin Shoji of the Japan Broadcasting Corporation, we made a typo. It's NHK, not whatever we wrote. Sorry for the confusion.

Jordan, one of Washington's staunchest allies in the Middle East and one on which it relies heavily, is a sitting duck for ISIS. The NYT's Ben Hubbard reporting from Maan, Jordan on Page One: "...Across the Arab world, the drive for democratic change has stalled, for the moment at least, and in its place has been a resurgence of strongmen and Islamic militants, both selling the promise of stability and order as counterpoints to the tumult that followed the Arab Spring. For many here, the radical Sunni jihadis of ISIS are seen as a

force battling oppression, an unsettling prospect for Sunni rulers, like the king of Jordan, as much as for Shiites, like the prime minister of Iraq. As other Arab nations have fallen prey to protests, wars and Islamist insurgencies, Jordan has maintained its reputation as a pro-American bastion of stability better known for hosting reefugees than for civil unrest.

"But Maan has long challenged that image with a mixture of poverty, Islamism, criminality and neglect that has fueled recurrent clashes between the government and the town's heavily armed populace."

Maan's mayor, Majid Sharari: "There is no ISIS here, but there could be because there is oppression, frustration, high prices and unemployment... All that could lead to chaos." More here.

Robin Wright on the new way of war: killing kids. Read it on the New Yorker blog, here.

Meantime, the Iraqi Parliament wobbles over forming a government. The NYT's Alissa Rubin and Suadad Al-Salhy: "...Even a senior leader in the Islamic Supreme Council of Iraq, a Shiite party that now opposes Mr. Maliki, said that 'replacing Maliki now could be seen as a victory for the terrorists, and it also could adversely reflect the security leadership's morale because if Maliki is not there anymore, they could be dismissed or accused of corruption.'

"The Sunnis are demanding an amnesty for the tens of thousands of Sunni imprisoned - unjustly, they say, in most cases - by the Maliki government and a bigger say in how the country is run, including its security services. While some Shiites might be willing to give that to them, others are adamantly opposed.

"The Kurds believe they have an absolute right to include Kirkuk and some surrounding disputed villages in the autonomous Kurdish region, but neither the Sunnis nor the Shiites want to cede that ground, especially since the Kurds have made it plain that their ultimate goal is independence." More here.

Is Baghdadi the new UBL? If the Middle East and the West have a new boogie man, they may have found it in the leader of ISIS. Abdulrahman Al-Rashed for Al-Awsat: "The emergence of the leader of the Islamic State of Iraq and Syria (ISIS) has rekindled fears that a new figure has emerged capable of uniting Al-Qaeda's different branches under a single commander. The emergence of Abu Bakr Al-Baghdadi has ended a dry spell for Al-Qaeda that has lasted for three years, following the death of Osama Bin Laden. The time and place of Baghdadi's emergence raises questions about what this group is, who controls it and who was able to break into it. ISIS emerged suddenly in Syria, at a time when the collapse of President Bashar Al-Assad's regime seemed inevitable. The emergence of ISIS saved the Syrian regime by frightening the rest of the world with the specter of a terrorist regime replacing Assad, and by fighting against his other opponents." More here.

Israel weighs a ground invasion. Michele Chabin for USA Today this morning: "Israel's military launched fresh airstrikes against targets in Hamas-controlled Gaza Strip on Tuesday in a bid to halt a barrage of rocket fire that has pummeled southern Israel in recent weeks. But it is not yet clear whether a full ground invasion of the Palestinian coastal enclave by troops will take place. Israel is seeking to "retrieve stability to the residents of southern Israel, eliminate Hamas' capabilities and destroy terror infrastructure operating against the State of Israel and its civilians," its military said in a statement." More here.

Israel calls up 1,500 reservists after rocket attacks from Gaza. LA Times' Batsheva Sobelman in Jerusalem: "Palestinian militants fired dozens of rockets from the Gaza Strip into southern Israel on Monday evening, officials said, as the Israeli military sent more forces to the border and called up army reservists in the escalating crisis... Capping a day of attacks, Palestinian militants fired 40 rockets in one hour late Monday, setting off air raid sirens in communities as far as 50 miles from the Gaza Strip, Israeli military officials said. A dozen rockets were intercepted by the Iron Dome air defense system and about 30 struck open areas, officials said." More here.

Bahrain orders a senior U.S. diplomat to leave. The WaPo's Ernesto Londono: "The Bahraini government declared a visiting senior U.S. diplomat persona non grata Monday after he met with representatives of a Shiite opposition party, and it took the highly unusual step of demanding his immediate departure from the tiny Persian Gulf kingdom. Bahrain's Foreign Ministry said in a statement that Tom Malinowski, the assistant secretary of state for the Bureau of Democracy, Human Rights, and Labor, had 'intervened flagrantly in Bahrain's internal affairs' by meeting with a political party 'to the detriment of other interlocutors.'

"The State Department said Malinowski remained in Bahrain on Monday evening while U.S. diplomats in the capital, Manama, sought clarification from Bahraini officials about the request." More here.

Germans are in another uproar over U.S. spying - but they shouldn't be surprised. FP's Shane Harris: "Revelations that a 31-year-old German intelligence service employee has allegedly been passing hundreds of classified government files to the United States for the past several years has prompted cries of shock and outrage from some of the Obama administration's closest allies in Berlin. But the Germans shouldn't have been surprised. Washington has been spying on Germany for decades, and that work will almost certainly continue well into the future." More here.

HRC in Spiegel Online: Surveillance on Merkel's phone was "absolutely wrong." Read that interview with Spiegel Online reporters and Hillary Rodham Clinton, here.

Social media producers alert: There's this from FP's Elias Groll: "@CIA Go home, you're drunk." A look at the CIA's new Twitter feed, here.

Chinese cyber spies targeted U.S. experts on the Middle East. The WaPo's Andrea Peterson: "Middle East experts at major U.S. think tanks were hacked by Chinese cyber spies in recent weeks as events in Iraq began to escalate, according to a cybersecurity firm that works with the institutions. The group behind the breaches, called "DEEP PANDA" by security researchers, appears to be affiliated with the Chinese government, says Dmitri Alperovitch, chief technology officer of the firm CrowdStrike. The company, which works with a number of think tanks on a pro bono basis, declined to name which ones have been breached." More on that here.

For Inside Cybersecurity, Christopher J. Castelli looks at a State Department study that doesn't break much new ground: "A yearlong State Department study effort to craft a 'framework for international cyber stability' has produced a draft report endorsing ongoing work on international norms of behavior for cyberspace and urging industry involvement, though the document fails to break much new ground." Read that here.

ICYMI, FP's Shane Harris' exclusive last week on how a solar panel manufacturer wants the Commerce Department to go after China for cyberattack, here.

What will Putin do in Ukraine? The WSJ's James Marson in Kiev and Julian Barnes in Washington: "As Ukraine laid plans for a siege of pro-Russia separatists' remaining bastions Monday, Russian President Vladimir Putin faced a critical decision on whether to answer rebel pleas for military help-a move that could determine what he gains or loses following a monthslong conflict that has roiled global powers... Mr. Putin has publicly ignored increasingly desperate appeals by militants to send in thousands of regular troops he has massed on the border-a force that would likely brush aside Ukraine's growing but relatively inexperienced forces.

"His choice boils down to coming to the aid of the separatists, keeping Ukraine off-balance and bolstering his nationalist credentials at home, or consolidating his gains so far-chiefly Ukraine's Crimea peninsula, which Russia annexed in March-and averting the threat of tougher Western sanctions that could do major damage to the Russian economy, as well the risk of further international isolation. U.S. officials said it was unclear why Mr. Putin hadn't responded more forcefully to Ukraine's advance, and said that the option to send in troops may remain on the table." More here.

Russian and American ships sail in competing Black Sea exercises. Military Times' David Larter: "It's the tale of the two maritime exercises: In the Black Sea, the U.S. and its allies are starting up multinational training while Russian warships separately maneuver in a large-scale war game. The cruiser Vella Gulf entered the Black Sea on Monday and is meeting up with Bulgarian, Italian, Greek and Turkish forces there for the Bulgarian-led annual exercise dubbed Breeze. A 6th Fleet news release said the cruiser was participating to reassure allies of the U.S. commitment to stability in the area." More here.

Where do America's remaining sources of power lie? Elbridge Colby and Paul Lettow: "...Within the United States, there is an ongoing debate about the appropriate uses of American power abroad. But whatever one's views on how U.S. power should be used, there is little reason to support its erosion. If one favors extensive American engagement, a resilient America will be better able to lead and intervene effectively. If one favors retrenchment and restraint, a more powerful America will be better insulated from outside threats. If one favors measured engagement, strength provides options and the firmest basis for sustained success. And, irrespective of foreign policy, an economically dynamic, growing America will benefit all its citizens, particularly the generations to come." More

SARL NEWS SUNDAY 29 JUNE 2014 (...)

A NEW TRANSATLANTIC ATTEMPT ON 144 MHz

The Irish Radio Transmitters Society's Brendan Trophy for the first
two-way transatlantic amateur communication has gone unclaimed for
years. A determined effort is being made this summer by the Brendan
Quest team in Pouch Cove, Newfoundland. Using 750W to a 30 metre long
43-element Yagi at 6 to 8.5m above ground level, the VC1T team hope to
achieve transatlantic communication on 2 metres, one of the few
remaining amateur radio distance records. The detailed summer operating
schedule has now been released atwww.brendanquest.org and describes how
VC1T will be using WSJT, CW and SSB between 4 and 12 July. It is
important that EU operators follow the operating protocol closely to
increase the chance of success. Full details, including details of the
monster antenna, are on the website.

I have checked the RDSspy logs and the PI for CITY is a solid 62AC and not a rogue.
I also discovered just before City appeared the PI for YLE radio PI 6201 so what I originally thought was City maybe YLE as it fades out and then City appears.

I have uploaded a video so 0 - 1.05 YLE and 1.09 - 2.12 City.

https://www.youtube.com/watch?v=Hg6MLcnfo-w

Thanks for the help so far.

Andy

Hi! It’s NRJ, not Rockklassiker. Rockklassiker has cut down the number of frequencies due to high costs and instead given some of them to NRJ. 107,5 Stockholm and 107,8 Göteborg are now dead and the frequencies are given back to the authorities.

Commercial radio ist not allowed to have higher power than 1kW ERP but SR is allowed to use 60kW ERP.

Rockklassiker has only 10 stations left.

Okay John, yes I have seen your entry for the 2nd, my mistake. Take your time with the 3rd, there is no rush. And new openings take precedence, so the longer it is going to take the better.

Onderwerp: Re: [SkywavesDX] July 2nd 2014 FM Log - The big one!

Hi Janpeter.

You have seen my entry for the 2nd. My big one came on the 3rd and I have just started compiling this one from my videos. I doubt I will match Paul's amazing tally, but I can report 136 loggings by 1000 in the morning. I haven't reached the Scandinavian takeover part of the day and this will take some time to go through. With so many little interruptions lately I am lagging behind quite badly, but I hope I will be able to make some good inroads into this tomorrow. If you want to have a look at the progress so far, see http://www.fmlist.org/fm_logmap.php?datum=2014-07-03&omid=2149

Hi Andy, all R.City (Tampere) ads on 89.5 MHz, Iittala ads as the closest to local and also Tampere mentioned. No Yle on your excellent video, so stereo and full dynamics recording. Playing later mighty Pink Floyd and our local rip Hurriganes rock'n'roll mighty as well. Btw which buttonpanel you have on top of the tuner rack ? Antenna switchers ?
Radio City is Vertical, 400W, Vammala tx. Many ads on the clip were "network" ads but Tampere mentioned later on, as maybe the Iittala ad like a local spot (my humble opinion).
Now to BRA-GER football.

Thanks very much Hannu for clearing that up so I can only assume they have a different PI now.

The selector switches on top of the tuners is a 3 way scart selector for the audio outputs from the tuners which the output from the switch goes to the recording PC.
The tuner's have there own aerials the Sony 520 bottom is on a vertical dipole the middle Sony 311 on a Triax FM 5 and the top Sony 311 is on a homemade FM 3.
I do have another Sony 520 on a shelf above working on a vertical FM 3.

33200. Re:: Antenna design

Yahoo group: SkywavesDX (2014)
Date: 2014-07-08 22:32:15 UTC
From: davebunyan@...
Topic: 32469 Message: 33200

I've used 4nc2 to model a wideband Yagi for low VHF. It has 5 elements - a bandwidth of 48-74MHz which are the (roughly) 3:1 SWR points. At around 52 and 70MHz the SWR is close to 1:1 rising to around 2.5:1 in the middle. It has a not impressive 8 dB f/b and f/r ratio over most of the range rising to around 15dB around 72MHz.

I also modelled the various aerials in the old TV DX'ers handbook - produced before every there were computer programs to allow antenna modelling - and they do not exhibit the sort of wideband characteristics we expect nowadays. The 5 ele wideband design has 3:1 SWR b/w of 51-63.5MHz - but maintains directivity up to 65MHz. It manages a f/b ratio of 12dB at the low end, 10dB in the middle and up to 15dB around 63-64MHz .

There is a log periodic design - which is beyond my capability to model - I only dabble with the program. Here's a link to the web page 45-70 MHz Band 1 DX TV Antenna Designs http://home.iprimus.com.au/toddemslie/band1_TVDX_aerials.html

Hope this is useful

Hello!
About your Spanish UNIDs:

>106.5 E917 esRadio_ AQUI____ PUBLI___ via? Guadalajara or Madrid?

Guadalajara.
I don´t know why people say Alcala de Henares.

>107.0 PI 1200 OM ID - mention of Sanlucar De Barrameda (Cadiz) recording here:
https://app.box.com/s/jgll786oz52l0huoizuz https://app.box.com/s/jgll786oz52l0huoizuz
Onda 80? radio?

It seems a program relayed with some stations, mentioned Bahia Sur Radio Sanlucar de Barrameda and Onda 207 Radio.
I need time to investigate this matter.

>107.1 PI C080 SOLRADIO ALCARAZ_ E.M.____ via?

Sol Radio, Alcaraz, province of Albacete.

Any help with these would be great.

33209. 87.6 help please

Yahoo group: SkywavesDX (2014)
Date: 2014-07-09 10:17:33 UTC
From: orionz25@...
Topic: 33209 Message: 33209

Hello. During the E Skip opening to Norway on 02/07/2014, I could hear what I thought was Arabic music on 87.6. At first I would have presumed it was Algeria, considering it is a regular visitor even if E skip is received from another part of the world at the same time. But I have had two Youtubers tell me it does not sound quite Arabic. In the recording, it is from 0:45 to 1:00. Can somebody help please? Thanks.

https://www.youtube.com/watch?v=ozFTmhtzTgU

That is the question, did anybody else receive Turkey at the same time as Norway? I know somebody else said they received this station as well. Another theory is maybe a community or multi-language station in Norway.

sleeper77, Southampton.

Hi Juan Antonio,

thanks for the help with the others and the detective work on this one.

This was heard at 1551 UTC so 1751 Spanish time.

Dygital Radio from San Clemente, CU is reported with PI 1200 on this freq - it is the reference to Cadiz which confused me.

Is it Dygital?

Paul

Difficult
but not impossible!
Program is
Latin Dreams, relayed by dozens of Spanish and Latinamerican FM stations.
I got a
podcast and bingo! Your record matches 100% with it.
Dygital
Radio is mentioned too on that podcast, this station relays Latin Dreams from monday to friday
between 17:00 to 18:00 Spanish time (15:00-16:00 UTC).
Great log!

33229. Strong Turkish/Bulgarian opening 09 July 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-07-09 22:44:49 UTC
From: davebunyan@...
Topic: 33229 Message: 33229

Band 2 went wide open to Turkey around 1415Z - with a single Greek station preceding it by a couple of minutes.Bulgaria came through strongly shortly afterwards By 1506Z Italy was starting to appear, then strong signals from Tunisia and more and more Italians.

The Greek,Turkish and Bulgarian signals were extremely strong and given the distance and my low antenna height I'm wondering if there were 2 Es clouds involved in the propagation without a reflection from the ground.

Damn! Or "Congratulations" might be a better word ;O). I am gutted that I was not listening at this time. I cam into this opening an hour late as I had been typing up my logs from the 3rd and completely overlooked checking the radio. Bulgaria was all over the place by 1500 and that is when I started listening. I wondered if I might have missed Turkey when I eventually saw the 6m map. Of course, I might not have had it at all, but I will never know.

Good one Dave!

John

Yes, my friends, Shumen was loud with RDS on 87.6 and I briefly heard Romanian on 88.7 Mhz. I had a nap around 1600 UTC while parked on 87.6 and when I awoke Croatia had left its mark _HRT HR1_.

There was a brief attempt at Spain, bottom of the band, round 2000 UTC;;;

That's the way it goes! I had to break away after an hour or so as I had to prepare a roast dinner* as the family was coming over for the evening (Wife visiting her mother in hospital). So I missed the opening to Italy - but am sorting through what I captured with the ST-311 in scanning mode - 28 out of the 30 presets have stored the station names - and the RDS Log has 300 lines in it.

Hi everyone,

My first email to the group, I used to be a member until last summer but changes in my personal life meant I had to leave the hobby. To cut a long story short while driving last week I caught some Italian stations at the bottom of FM and the bug has returned. I'm using a partially broken Sony SB920, the tuning control is erratic to say the least but with some spaced out memories I can just about get by until I have it repaired. My aerial is a Blake eight element I've attached to the side of the house pointing south east.

Welcome back to the hobby Chris regarding the erratic tuning control this can be caused by dirt on the contacts.
I solved this problem on one of my Sony 311's by dropping some isopropyl alcohol in a small hole on the side of the encoder and turning it at the same time.
You will have to take the encoder pot off the front panel by pulling the knob off and unscrewing the nut.

Andy

33247. METRO 107.9

Yahoo group: SkywavesDX (2014)
Date: 2014-07-10 17:07:24 UTC
From: Andrew Webster
Topic: 33247 Message: 33247

I have been going through more of the video from the 3rd and this station on 107.9 has "METRO" as the PS and PI:F395.

It is unlisted so does anyone know where it might be from.
I have uploaded a video of it but it's not much help as there is no speech.
I uploaded it to Youtube but it got blocked so I have put it on Vimeo instead.

Andy hi, and the condx were towards to ? Strange PI anyways. If towards I,
so there's a R.Metro in Cervignano del Friuli (UD) (main office)..

Hi Hannu this was during the opening to Scandinavia and the PI was solid with the PS appearing on the tuners display.

I checked Norway and France but no luck with the PI.

Ok, somehow "I knew" this, I was going to say that finnish Metro FM plays
just this kind of (boring,million times heard) music, but the fq does not
fit. Strange..

Well, a bit less unlikely may be this one±

Radio Metro, tx Mistberget, Norway. It is listed with a different PI though. But FXXX fits for Norway as the country.

73, Janpeter

From: sniffingmoose@...
Topic: 33256 Message: 33256

Hello

Getting a lot of Low power welsh TX's this morning. Also Blaenplwyf 95.3 BBC Radio Wales.

On 103.8 BBC R4 Llandridod Wells is blocking BBC Radio Nottingham.

On my Roberts DAB Sports portable radio using headphone wire as antenna and in the house I can hear this morning:-

DAB Northeast Wales and West Cheshire on 10D
DAB Cardiff and Newport on 12C Blocking Nottingham on 12C
DAB Hereford & Worcester on 12A
DAB Nothampton 10C

Chris
Burton on Trent

33257. Re: [SkywavesDX] Hello to the group.

Hi Andy,
It never crossed my mind it might be something as simple as that, I was suspecting an electronic fault so I'll get to Maplin over the weekend and pick up a can if they still sell it and give the encoder a good squirt. I have been doing paperwork this morning and FM sounds very quiet, a few bursts of German on quiet frequencies which I take it are meteor pings but no sporadic.
Chris

Welcome back to the hobby Chris regarding the erratic tuning control this can be caused by dirt on the contacts.
I solved this problem on one of my Sony 311's by dropping some isopropyl alcohol in a small hole on the side of the encoder and turning it at the same time.
You will have to take the encoder pot off the front panel by pulling the knob off and unscrewing the nut.

Andy

aww you can't tease us like that dude!
which flea powers are you getting, 95.7 & 96.1 ? they get out well to the east
check 93.6 & 104.8 if you haven't already maybe 103.5 too

Its nice to see someone else logging these apart from me & John

keep up the good work

> Radio Metro from Mistberget near Oslo, but strange PI starting with E
> and not F as the normal code for Norway

And yes it has a different PI in FMlist, but it is from the Station
before Radio Metro took over the Frequency.

From: Andrew Webster
Topic: 33247 Message: 33260

Thanks for all the replies I did google Metro FM and the only meaningful result was Metro FM Durban lol.

I did make a typo with the PI I put E instead of F but it does look very likely that it is Radio Metro from Misberget.

Sorry Niels I forgot about the comment you made about Metro.

Thanks again all for all your help on this.

Moonbounce 50th anniversary

July 2014 marks the 50th anniversary of the first time that amateur signals from the UK reached other parts of the world by bouncing off the moon, a technique now known as moonbounce or EME, earth-moon-earth.

In the July 1964 edition of Radio Communications the RSGB announced that at 20.20 GMT on June 13th, 1964, G3LTF at Galleywood, Essex, and KP4BPZ in Puerto Rico, made contact on 430 Mc/s by bouncing their signals off the moon. Signal reports were RST459 both ways.

A further contact took place one hour later. KP4BPZ was fortunate in having the 1000ft radio-telescope dish aerial at Arecibo, Puerto Rico at his disposal. G3LTF's equipment included a 15ft dish aerial and an AF139 transistor preamplifier for reception. Power input to the PA was 150 watts.

What is more remarkable is that Peter, G3LTF is still active on moonbounce and is one of the world's leading pioneers. The RSGB offers Peter, G3LTF our heartiest congratulations on this 50th anniversary of his achievement.

Greetings

Dennis, ZS4BS

Like a fine wine I'm not getting older, I'm becoming more complex

I'm afraid those flea powered Welsh sites are a thing of the past since
I moved to Skegness. I have fond memories of receiving those txs from my
old Nottinghamshire QTH and when out mobile in the Derbyshire hills.
It's surprising how well some of those txs get out. Never assume you are
always receving the higher powered txs though.

Good DX!

John

I associate myself with the comments of my right honourable friend,
the member for Skegness
however he is being too modest, when Llanrheadr-Ym-Mochnant drifted
down to 103.776
John was able to detect the carrier in Skegness during gaps in speech
using USB mode.

that was during flat condx

very wierd
would have thought Derek Hilleard in Devon would have logged it
before someone in suffolk

I see i noted absolutely no sporadic E on Band 2 on the 6th there
might have been some Irish tropo but i didn't log anything new so
didn't alert anyone

Yahoo group: SkywavesDX (2014)
Date: 2014-07-11 17:21:57 UTC
From: Chris Thatcher
Topic: 33269 Message: 33275

Hi,

My home is in Lincoln, UK. I have a vertically polarised roof aerial that points to The Netherlands & Germany.
During Tropo Lifts, I have received both Dutch and German DTV, through this aerial.
I believe most, if not all, Dutch DTV is transmitted in vertical polarisation. Also some German DTV transmitters use vertical polarisation.
The most frequently received Dutch DTV transmitters all use UHF channel 39 (Central Netherlands).
The most frequently received German DTV transmitter is at Aachen, using UHF channel 37.

See my YouTube channel https://www.youtube.com/results?search_query=brumlad36 to see what I've received in the past.

Cheers,

Chris.

** Personal Skegness 'First'

My biggest personal FM logbook ever and the most countries I have
received on band 2 on the same day! That's of them - or if you use the
DXCC list.

There are 466 stations in the log from 24 countries. I appear to have
lost my videos of the North African openings, otherwise Morocco, Algeria
and Tunisia would have featired too. I suspect I had not pressed the
record button in Bandicam - something I do occasionally, thinking that I
have.

The Scandinavian reception was quite intense with local stations of as
little as 13 watts coming through well. Many of the low powered locals
at the top of the band were producing instant RDS. There are lots of
stations I couldn't identify. Any help with these is appreciated. One
which comes to mind are:

There is a video of the Scandinavian opening at:
https://vimeo.com/100387771

There were many stations I could not identify. Thank Goodness for the AF
list in the GTK software though! Without these I would not have been
able to nail down many of the sites and many would have got away. More
than one part of Norway was coming in, so it was not possible to rely on
the FM List bearing "focus".

Italy presented the same difficulties as Spain did yesterday, as more
than one area might have been open at the same time, making it difficult
to identify the correct site. As always, I was as careful as possible,
but if any of these sites are obviously incorrect I am happy to make any
necessary corrections.

Other video highlights can be found at:

03-07-14. Spain & Portugal https://vimeo.com/100387769
03-07-14. Corsica & Sardinia https://vimeo.com/100387770
03-07-14. Finland https://vimeo.com/100387772

03-07-14. Poland & The Balkans, Then Italy https://vimeo.com/100387773

I wondered if there might be something more exotic in the last video, but I will come back to this in due course.

For those who prefer the country/frequency ordered lists:

33280. Re: [SkywavesDX] Skegness Log: 03-07-14

Yahoo group: SkywavesDX (2014)
Date: 2014-07-11 21:03:21 UTC
From: Patrick Travers
Topic: 33279 Message: 33280

This defiantly has the wow factor, superb logging.
Well done John, SkegVagas the dx capital on the east coast
Patrick

> My biggest personal FM logbook ever and the most countries I have received on band 2 on the same day! That's of them - or if you use the DXCC list.
>
> There are 466 stations in the log from 24 countries. I appear to have lost my videos of the North African openings, otherwise Morocco, Algeria and Tunisia would have featired too.

I suspect I had not pressed the record button in Bandicam - something I do occasionally, thinking that I have.
>
> The Scandinavian reception was quite intense with local stations of as little as 13 watts coming through well. Many of the low powered locals at the top of the band were producing instant RDS. There are lots of stations I couldn't identify. Any help with these is appreciated. One which comes to mind are:
>
> There is a video of the Scandinavian opening at: https://vimeo.com/100387771
>
> There were many stations I could not identify. Thank Goodness for the AF list in the GTK software though! Without these I would not have been able to nail down many of the sites and many would have got away. More than one part of Norway was coming in, so it was not possible to rely on the FM List bearing "focus".
>
> Italy presented the same difficulties as Spain did yesterday, as more than one area might have been open at the same time, making it difficult to identify the correct site. As always, I was as careful as possible, but if any of these sites are obviously incorrect I am happy to make any necessary corrections.

33281. Re:: Re: [SkywavesDX] Short Range Tropo from Wales

Yahoo group: SkywavesDX (2014)
Date: 2014-07-11 21:21:58 UTC
From: sniffingmoose@...
Topic: 33256 Message: 33281

Hello

No not Welsh Tx 95.7 as its blocked by radio Wm (95.6) and not 96.1 as its blocked by Radio Shropshire (96.0) However I did get Welshpool Radio 4 94.0.

But I got 95.1 BBC Radio Wales I assume Carmel this morning. I have heard this TX a few times at this location during Tropo conditions.

Also 93.5 Llandrindod out does Wrotham and Birmingham's Unity FM quite often.

I have yet to hear Ireland at this Location

Chris T

Burton on Trent

Well there is another new record for me Patrick - probably the most disjointed and badly written piece of waffle in a post to Skywaves! :O}
I thought I had checked through everything in my last post, but clearly not. I had prepared some of this in advance to save time, intending to add bits to it as I went along. I suppose it was coherent enough to get the main points across though. Thanks for the kind words anyway.
Scandinavian openings are rare enough, but to have something like this materialise was quite something. You just need to be in the right place at the right time.

A couple of pieces on my blog which might be of interest too.

http://skegnessdx.blogspot.co.uk/2014/07/seriously-how-long-does-it-take-me-to.html

and

http://skegnessdx.blogspot.co.uk/2014/07/retro-video-dxing.html

Hopefully of use.

John

Hi Chris. You can try to use a large VHF-aerial and point it towards Scandinavia. In my region west Sweden, we have several transmitter on Band III carrying DVB-T2 and MPEG-4 open air, no encryption.

In south Sweden E10 is used and along the west coast E7 and E9 and some LP and one major tx on E5.

Hi John,

I am totaly new to the FM DXing sides of things and have started with a car stereo Kenwood (don't like DXing with it though!) and an Eton G3. I've just read your logs and would be interested to know what tips you might have for a newbie to at least this side of DX RXing. Especially regarding equipment and antennas, but nothing expensive to start with.

I've just bought an RTL SDR Dongle which I love (especially at £10) and wonder if you know of any sensitive software for RDS decoding.

Hope you don't mind my asking you. 73 Adam (M6RDP)

I thought I had checked through everything in my last post, but clearly not. I had prepared some of this in advance to save time, intending to add bits to it as I went along. I suppose it was coherent enough to get the main points across though. Thanks for the kind words anyway.
Scandinavian openings are rare enough, but to have something like this materialise was quite something. You just need to be in the right place at the right time.

A couple of pieces on my blog which might be of interest too.

Bad season here in Finland altough China received on FM on three frequenices in East Finland.

The only good day, 3rd July, is the best so far giving stable opening over Ireland and N.Ireland for
2h. It seems only the NW-area in N.Ireland (where Paul lives) was not well open (ICR etc. not
received).

The best UK-catches in Finland where low powered RSL-stations around 87.7 - 87.9:
87.7 Lune Valley Agility FM, Lune Valley, Cumbria. Confirmed 1 Watt power (TRP?)

87.7 Tennis championship radio broadcast, Wimbledon
87.8 Radio Ramadan, Stoke-on-Trent
87.8 Klub FM, Cork. A pirate from Cork
87.9 Summerfest Radio, Haddenham
I was not lucky to identify RSL-stations but heard many with music and talk on 87.7.

I think almost all Irish local stations where audible among all networks. The only part not

up was NW Ireland. I was lucky to identify 6 access-stations with 25 Watts and heard also two
parish radios.
105.3 Drive 105 FM, Londonderry 25W
106.4 Blast 106, Belfast 25W
107.1 Radio Fáilte, Belfast 25W
107.2 Amber Sound, Ripley, England 25W
107.6 Carrickfergus FM, Carrickfergus (near Belfast) 25W
107.9 Bangor Community R., Bangor (near Belfast) 25W
106.6 UNID parish radio (found from internet two parish using this channel)
108.0 UNID parish radio (found from internet two parish using this channel)

A nice one was 102.5 Môn FM, Ynys Môn, Wales, which had automated announcement of
their coming start 12.7.2014. Also CRY,Yoghal 104.0 and CRC Castlebar 102.9 id'ed.

Only several smaller community radios left to id from Ireland and N.Ireland. Almost all now picked up. In 1988 I was on good Irish opening and id'ed around 15 pirates, like Radio Vera from Limerick, CAU FM Dublin etc.

Hi Adam.

Welcome to the world of FM DXing!

I was having a discussion with a few radio enthusiasts a few days ago about the equipment needed in order to receive good DX. I think the main agreement was that you do not NEED to have anything expensive or complex. I was looking at some of the main factors in receiving equipment and trying to assign values of importance. It went something like this.

Having a good receiver: 10%
Having a good antenna: 30%
Being in the right place at the right time: 60%

These percentages can be debated, but I think the main point is there: While having a good receiving setup might be considered advantageous, DXers have often found that they have received astonishingly good DX with the most simple of setups because of the "right place, right time" scenario. Some of the best DX I have personally received was when I used much simpler equipment than that I use now - an old analogue hi-fi tuner and a loft antenna, for instance. I received Lebanon and Turkey on FM from my old location in Nottinghamshire, where the band is overcrowded.

A three to five element beam is recommended if possible, mounted outside and clear of your rooftop. If not, a simple FM omni will suffice, though the latter have matching problems because of their design, but I have used them in the past and they don't do a bad job, but ideally, a beam and a rotator are extremely useful, but do not be deterred if you are unable to use these. It's true though, the aerial _*is*_ one of the most important parts of the setup. "No radio is better than its antenna", is an old phrase I well remember, but a simple half wave dipole will get you started and, simple though it might seem, can bring you some exceptional long-haul catches. You can build them yourself too.

Portable radios can be very good. There are some superb Chinese models out there, like the Degen DE1103. There are others. Also, car radios can be put to good use in an indoor environment and many DXers recommend these. Look for those with digital signal processing like any of the "Digiceiver" variety from Blaupunkt - often to be found cheaply on Ebay. Search through older messages here as these things have often been discussed. I don't know which Kenwood car radio you have, but I have one too and it is not a DSP model and was "wide" ish for DXing, though I did apadt the IF filtering in it, which slightly improved selectivity, but while destroying the audio quality.

Modern day SDR receivers are also very good these days. Even the cheap ones you can get for less than a fiver from China are not a bad option, but they all have their own little quirks, like being susceptible to overloading if you live in a strong signal area. Which SDR do you have? SDR# http://sdrsharp.com is often recommended, as is SDR Radio http://sdr-radio.com, but the latter may be overly complicated for a newcomer.

Hopefully other DXers will join in here. But please remember, and I think it's something which needs re-iterating every now and again, _you do not NEED to have an elaborate setup to hear extremely good DX. _

Hope this will do for starters.

John

Hell Ruud.

Well, some aspects of Mike's loggings might be open to debate. I don't wish to challenge his loggings but WELL DONE if he has indeed received those two, but you will have to read the transcription of his recordings. I think there was some evidence to suggest he received Iraq and Lebanon, based on the accents of the speakers, and there was an ID for one, but I am not sure how to interpret it all or link his recordings to actual stations. Good luck to him!

We can argue the point that it might have been Mike's equipment which got the result, but look at the signal strength - there is no doubt in my mind that he would have heard that with a five element beam. Let's not take away from the equipment he has. Mike is obviously a highly capable and experienced DXer, but one whose loggings have been brought into question in the past, but I think because of these issues one had to air on the side of caution. Nothing more.

What I really do not want to see happening is the quite honestly RIDICULOUS belief that you NEED expensive equipment in order to succeed in this hobby. You DO NOT, though it might help in various ways. There is an air of snobbery which I hope we do not see creeping into the hobby. People should not be put on a pedestal, or thought of as "more capable because ....". Some people like to shroud themselves in mystery to inflate their egos and, as people know from my "outbursts" in the past, I do not want to see that kind of thing here. We are all equals.

I hope that explains things fairly and does not open old wounds.

I did DVBT DXíng a few years ago with for me amazing results as far as Bergen Norway (953km) and some Sweden. Denmark was very common and boring to see.
UK was very difficult due to the low power they used.
I used a Hirschmann Fesa 817N69 antenna situated half a metre above the roof.
Complete logbook at http://www.radio-tv-nederland.nl/rbrdx/DVBT/dvbtlogboek2006.html
I stopped DVBT Dx because i was frustrated by the very poor tropo last years.

33299. Sporadic E to Spain

Yahoo group: SkywavesDX (2014)
Date: 2014-07-12 13:19:15 UTC
From: chris.thatcher123@...
Topic: 33299 Message: 33299

Hi folks,

This must have been the briefest of Sporadic E openings. It happened while I was in the garden for about 15 minutes!
Found on 87.9MHz, my radio was displaying this
http://i1064.photobucket.com/albums/u379/brumlad36/100_3848_zps0e69a0e0.jpg
http://i1064.photobucket.com/albums/u379/brumlad36/100_3848_zps0e69a0e0.jpg
a few minutes ago.
Here http://la879fm.com/ http://la879fm.com/ is a link to the radio station in Spain.

Cheers & 73,

Chris 2E0NDT (Lincoln, UK).

One point that hasn't been stressed is that if you have a big aerial it has to be pointing in the right direction for your DX signal. If it is pointing towards north Africa then you will be very lucky to hear much from eastern Europe!

I just use a dipole pointing NW/SE, and I hear signals from all over the place when conditions are right, from Algeria to Poland. If I ever got a big aerial on a rotator, I would not remove the dipole, it has strengths of its own.

As far as receivers are concerned, £20 can buy a decent basic synthesized hi-fi tuner. I have a couple of Technics ST-S505 tuners, these are pretty good to start with (2 x 150 kHz filters in the narrow position) and if you modify them with a couple of 110 kHz filters they are even better.

Paul

You can definitely get lucky with hi-fi tuners on eBay if you are patient. I paid just £22 for a Denon TU-800L tuner which has 4 150 kHz filters in Super Narrow mode (it has 3 IF bandwidths). It's the best stock tuner I have used for DXing, not counting the Sony XDR-F1HD. It doesn't have RDS but it really is a superb performer for hi-fi as well as DX.

Or, if you want a tuner with fast and sensitive RDS including the ability to display PI codes, you can't go wrong with a Sony ST-SB920.

If your going the tuner route I've found a modified Kenwood Kt 6040 to be the most selective and sensitive. For a portable a modified Degen 1103 is unbeatable in comparison to all the Etons and Tecsuns I've had in the past.

Thanks John, and thanks to Nick down in Exeter too,

I will have a look at the Tuners mentioned. I am using the EZCap RTL SDR with SDR# but the software doesn't do a great job on RDS decoding and needs a really big signal. Stuff by Eton G3 does effortlessly is missed by SDR#.

I've spent literally hours trying to get HDSDR hooked up to RDS Spy via a VAC but can I do it? Can I heck?

Can anyone help in this regard as I hear RDS Spy is a lot more sensitive at decoding weaker RDS signals.

Thanks again. 73 Adam

Hi Adam, I bought one of those cheap dongle SDR tuners last year and actually found it very sensitive to decode RDS using SDR Sharp. It did however need to be set specifically on 2048mhz bandwidth for that to happen but unfortunately my proximity to Stockland Hill caused so many overload problems it was rendered useless for any serious use.

Comments to Paul, Ruud and Pedro

Paul
NW and North Ireland has been very rare here, but during the years (37years FMDXing) I have heard
Inishowen Community R 107.6 over Donegal twice alone on the band. Again this time it was not well
over your area as well than more south, altough Londonderry 105.3 was up some time. It was intresting
opening as 2h, not moving so much.

Ruud
Yes, I think this was the best Irish opening ever here, long lasting and stable. Very interesting to see
Perseus FM+ waterfall 106.4 - 108.0 for some moments: No local stations, only Blast FM 106.4,
iRadio 106.7, Q107 107.0 and 5 strong Newstalk tx's side by side and one church on 108.0 MHz.
Unfortunately not so much pirates in Ireland anymore to wonder.

Pedro
Yes China was heard in Tohmajärvi, East Finland by Markku Sollo. He heard 3 stations, still UNIDs.
There is a commercial spot (Urumqi) with telephone number given on 92.9 and possibly an id.
Two other frquencies were 91.8 and 93.1. An intense recording rewinding is going on around
Finnish FM-DX-scene. Waiting comments from China soon.
China is not "impossible" here. Distance is 4167 km, not Finnish FM-record.
(On 8.7.2014 I heard some Spain: Radio Tropical Bilbao 102.9 and R. Donostia, San Sebastian 98.5 + UNIDs.).

Perhaps Jim Smith's wife could help with chinese? But let's see if the China-contacts can Markku
them now.

33316. Band II Sporadic E Loggings for 12 July 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-07-12 20:06:53 UTC
From: Janpeter van Dijk
Topic: 168 Message: 33316

Hi All,

A very brief Band II sporadic E opening today. Things started promising, wit the MUF rising to 100 MHz. Until soon after the start all DX was wiped away like a lightswitch.
This season just doesn't work for me :-(

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Saturday 12 July 2014
Band II Sporadic E Loggings:
MHz UTC ITU Program + Location km
87.70 0815 ALG Radio Chlef, Aïn N'sour (48) 1812km

88.10 0843 ALG Radio Batna, Metlili (5) 1872km

89.90 0845 ALG Radio Tipaza, Tipaza (42) 1730km

90.40 0848 ALG Radio Setif, Meghriss (19) 1751km

91.20 0844 ALG Radio Biskra, Metlili (5) 1872km

Hi Harri.

do you have many recordings from that day - I would love to hear them. Also 106.7 is from Monaghan not so far from me so I imagine you may have had Newstalk on 106.9 from Ardagh Longford, and probably 107.4 Truskmore (although Mohercrome in Cavan is also on that channel)

Hi Adam,

Let me add my ha'penny's worth (that dates me)

As others have said a huge aerial is not needed - although some Finnish DX'ers might disagree.

Outdoor is better than indoor for aerials if you are able to do this. A 3 element outdoor aerial won't give you a decent amount of rejection off of the back - a five element would be better. Mounted on a 5m pole it might not seem a lot - but is more than enough. Later you can buy a cheap rotator from Conrad.

An RTL-SDR dongle can work well - if you can avoid it overloading. I think you will find the North Hessary Tor transmitter a pain in this respect unless you can adjust any aerial to null it out, without losing the DX - hence comments about the 3 ele aerial. I use an RTL dongle but am restricted to certain aerial directions and have a variable attenuator fitted and a notch filter to knock out a troublesome local station (and lose about 2MHz with reduced sensitivity).

I have found that HDSDR software is better than SDR Sharp - sound is much clearer and it uses less CPU processing power. You can also join HDSDR to RDSSpy (using VAC software) - a free program that not only decodes RDS very efficiently it also allows you to save everything to a file.

With a conventional analogue tuner with RDS you can run a signal to the soundcard input of your PC and feed RDSSpy software. This is not too hard to do if you can do soldering - and are careful.

A Sony SB-920 or ST-311 would be a good tuner to start off with - there are actually quite a number of ST-311's on e-bay at the moment at very good prices. I prefer the ST-311 as the control buttons allow access to bandwidth and attenuator on the front panel. Before placing a bid - just ask the owner to check that the sound is free from hums and other spurious noises without the aerial being connected. I have one which is perfectly OK as the tuner in my hi-fi system, but you can hear a background hum on some channels with no radio station present - which affects weak DX reception. There are better tuners but there are four on ebay between £10 and £20 + p&p. Also if you have an electronics background you can replace the ceramic filters to improve selectivity - but the filters are becoming much harder to get hold of - so if you think you might want to try that - search on-line and but some now. I think 2 x 150 KHz + 2 x 110 kHz is a good compromise.

If you get into the hobby you'll want at least two tuners - you can use an aerial splitter to feed both off of one outdoor aerial without an amplifier as generally man made electrical noise is the limitation on reception unless you are in the countryside - and halving the aerial signal I still find background noise is higher than tuner noise.

Hope this is helpful

Thanks Sven for offering help.
I contact Markku tomorrow and give your email to him, so he can send it directly to you, if he needs help. I suppose so.
Someone has listened them already, but I do not know exact facts.There is a group of Finnish MW-China-specialists and their contacts working on the recordings.

There is a telephone number given which is partly solved - and possible id,
Two different chinese dialects on three recordings.

I hope one of them will be solved and id'ed: 91.8 / 92.9 / 93.1.

Paul I contact you directly of my observations. It is difficult to say the tx-sites of Newstalk because of so many txs on same channel. But for some moments all Newstalk-channels were up: 106.9 and 107.0 /.2 / .4 / .6 / .8 / . 106.9 was the weakest and not often up. iRadio 106,7 was up long periods.
I have nice ids on Perseus-files. Clean RDS-signals, but 25 Watters were weaker.

33320. 10 watt Italian station via SpE (?) 9th Jul 2014 (and UNIDs)

Yahoo group: SkywavesDX (2014)
Date: 2014-07-12 22:11:17 UTC
From: davebunyan@...
Topic: 33320 Message: 33320

The opening on the 9th July 2014 resulted in my Sony ST-311 in scanning mode showing 27 out of the 30 presets to be carrying Italian station names - and one with BNR.

Carefully un-tangling the information I've found that from 1521 to 1524 there was a strong path to Rocca di Papa just outside Rome with a total of nine stations logged plus a couple of others nearby.

A little later PI:3000 PS:55SO669 was received at 16:06 - which first of all I pinned down to 91.5MHz and then the corrupted PS showing the last part of a phone number confirmed it was Radio Evangelica. About 3-4 seconds later PI:5000 (Outstanding). The way I've set up the presets in the tuner this can only be on 92.0MHz which is Radio Farfalla - the two stations are about 55km apart in the same direction. I've checked the tuner out and even on the strongest local (70dB) RDS is not triggered on adjacent channels - so the transmitter on 91.9 is ruled out as is the one on 92.1 - neither frequency being preset into the tuner.

So unless someone can advise of a transmitter on 91.8 or possibly 91.7 that uses PI: 3000 it looks like a 10 watt signal has made it via SpE and on a 5 ele aerial at 5.5m high.

The opening also threw up a bunch of unidentifiable stations - in no particular order

93.0 PI:5A0E PS:SKYLAB
93.8 PI:FF01 PS:-------- only shows in FMList as Norway - but is Cultural ROU
93.0 PI:5430 PS:--------
??.? PI:F0F0 PS:AVVINISN and ----34--
91.6 PI:9000 PS: __RIGHT_ and __JENNE_ the first PS was stored into the tuner preset.
93.0 PI:5DFE PS:-------

From an earlier opening PI:FF11 has still to be identified.

Any help gratefully received

Rgds

33321. Re: [SkywavesDX] Re: DVB-T Dxing

Yahoo group: SkywavesDX (2014)
Date: 2014-07-12 23:28:00 UTC
From: Chris Thatcher
Topic: 33269 Message: 33321

Hi Chris,

Many thanks for the info concerning Band III DVBT/T2 TVDXing. Thanks also for letting us know that Band III DVB in Sweden now only carries encrypted channels.

Here in the UK, it's only possible to buy DVB tuners that work on UHF. I guess it would be possible to buy one that also receives Band III, and then import it to the UK, but that sounds expensive!

Until now, I was aware only that Luxembourg used Band III for digital TV.

Are you aware of any high power Band III DVBT/T2 transmitters in Norway, Denmark or Germany, that also transmit in the clear?

Best regards,

Chris (Lincoln, UK).

Attachments: 1 described; binary payloads are missing from this source WARC

Hi!

We got ”back” Band III because there were no space left to coordinate all transmitters on UHF with HDTV. We have to coordinate together with our neighbour countries Norway, Denmark, Finland, Germany, Latvia, Estonia and Lithuania and maybe Poland. What I know E9 in Hamburg is dedicated for HDTV.

Norway and Denmark what I know have nothing on Band III left.
On the last page in the PDF-file you can see which TX what country it has to take care of and ”protect”.

We will also loose ch E48-E60 2017 due to a decision taken in the Parliament and that will make it even more difficult.

I can return late with German tv-transmisson channels. It’s time to sleep.

/Chris

Today morning at Budapest I received the following on 100.00 MHz:
(could be 99.90 or 100.10)

PI: 62E9
PS:Radi--la
Then the PS showed many frequencies
It can not be Radio ROKS from Ukraine.

Has somebody any idea ?

Thank you,

Balazs

33333. Do Cape Verde still use 87.6?

Yahoo group: SkywavesDX (2014)
Date: 2014-07-13 11:11:04 UTC
From: John Faulkner, Skegness
Topic: 33333 Message: 33333

Cannot see it in the FM List, but I think I may just have had it if so.
I heard a YL speaker on 87.6 about five minutes ago, talking fairly
monotonously. I never thought at the time and checked the RDP1 web
stream a few minutes later. The same YL was talking, I'm sure of it.
Aren't all stations on 87.6 in mainland Portgual on a pop format?

I wasn't recording, so I'll probably never know.

John

From: Günter Lorenz
Topic: 33333 Message: 33335

A well-known DXer has been on Sal in April 2013. He reported that 87.6 had moved to 89.1.
FWIW, they are still listed in WRTH 2014 on 87.6, and also their website lists 87.6.
I have just updated the links in FMLIST, including the stream.

73,
Günter

33349. Re: [SkywavesDX] Es > Spanish Sahara

Yahoo group: SkywavesDX (2014)
Date: 2014-07-13 12:15:57 UTC
From: John Faulkner, Skegness
Topic: 33340 Message: 33349

As we know, there are some new and unlisted stations testing in Morocco and I am hoping my 88.1 is not one of them. I have the PI and PS videoed though the audio had dropped out by the time I hit the record button. Since Al Watania is listed in Spanish Sahara, I can only presume this is what I heard.

As I type, the Tata transmitter of Al Watania is coming in on 88.2 at a distance of 2691 km.

Good DX!

John

Topic: 33320 Message: 33351

Congrats on your 10 watt-er
Todd Emslie received an I-trip via e skip so in theory lots of
exciting things are possible, though perhaps not this season :-)

there used to be a micro broadcaster in Stoke-On-trent relaying radio
caroline on 97.5 24/7 for many years
I don't know if its still on because Sting FM Birmingham now blocks the channel

93.9/94.0 90.2 have also been used in the past for relays of the voice of peace

so if our Friends outside the UK are receiving Xrhthyms 101.8 and
Radio Ramadan 87.8 perhaps they could try 97.5 90.2 etc

also when you receive Stanton Moor, Derbyshire on 89.8/99.4 or
Ashbourne radios low power tx on 101.8 you could try for the Stanton
Moor spurious on 106.8? (it carries the audio of Radio 1)

I tried to estimate how much power it radiates, prob less than a watt
but through a very efficient aerial, a job for Julian H I think, next
time you drive the bakewell -matlock road have listen and see what
you think

Spain at low levels 87.7 now

Nice catch.

The area ceased to be called Spanish Sahara in 1975 - the name is common usage now is Western Sahara. Awsard is under Moroccan control.

Date: 2014-07-13 12:46:51 UTC
From: nick gilly
Topic: 33323 Message: 33353

I managed to hear some very patchy Es on the car radio on & off since 10.50 am with Algeria and Spain on 87.8 and 87.9 respectively. The latter was probably RNE 5 but it never reached RDS levels to confirm it.

This is the first time I've caught some E skip on our holiday here although I have only tried for Es when in the car. To be honest it's been a refreshing break to have been away from the tuners without the constant worry of when the QRM will interrupt a DXing session.

Good DX

Dear all,
the £5 RTL dongle that people use for SDR apps covers band 1 & 3 in
DVB more with the supplied software.

I'm taking it to Warsaw & Lviv to see what the state of DAB/DTV
broadcasting is in those cities
since its so cheap and disposable, i won't have a "spasm" if it gets trashed

wishing i'd held onto some kind of analogue hand held tv for Ukraine,
may investigate the cost of analogue video cards/dongles
but it won't be as fun as walking round with a sony watchman or IC-R3..
Jeff Kitching kindly gave me a card many years ago but IIRC it was UHF only

I think I may be staying at Wysocky Zamek in Lviv so the dongle could
be rendered useless by all the RF like it was at Llandudno (Great
Ormes Head is full of txs now)

Thanks for reminding us that Germany et al use Band 3, If i visited
Axe Edge during a tropo i should have a chance of seeing something

That's interesting. Thanks for this Stuart. I know nothing about the country and had no idea the name had changed.

So if Asward is under Moroccan control, does that make it an enclave? A small point but Google searches only bring up a singer called Aswad. I received the Ceuta enclave this morning too, though that is more correctly known as an exclave I believe.

From: Satnipper
Topic: 33340 Message: 33359

Ceuta and Mellilla are Spanish enclaves on the North Moroccan coast. They are considered by the Spanish to be part and parcel of the Spanish state (as autonomous cities) and are part of the EU. They have the amateur prefix EA9.

Western Sahara has a good Wikipedia page - http://en.wikipedia.org/wiki/Western_Sahara Most of the territory is under Moroccan de facto control whilst Polisario controls the rest.

Make sure you google AWSARD and not ASWARD - http://en.wikipedia.org/wiki/Aousserd

On the map on the page Wikipedia Western Sahara page Awsard is shown as just being on the Moroccan controlled side. It depends on your politics how you characterise it but I don't think "enclave" is the right word - "Moroccan controlled territory" would seem to be more appropriate.

The MF and HF transmissions from the SADR are probably from Tindourf in Algeria. There are also radio amateurs active - http://saharadx.jimdo.com/ . Western Sahara is a valid DXCC - S0.

Cheers

33362. HDSDR to RDSSpy without VAC - checking soundcard does 192kHz sampling

Yahoo group: SkywavesDX (2014)
Date: 2014-07-13 15:56:48 UTC
From: davebunyan@...
Topic: 33362 Message: 33362

Adam Toynton e-mailed me asking for help with getting RDSSpy to work with HDSDR having been frustrated in his efforts to get it working via VAC.

I was happy to pass on details of Andy Pritchard’s instructions and some screen shots to illustrate it.

To cut a long story short whilst checking things out I’ve found that I can connect RDSSpy directly to the Realtek via StereoMixer in Win7 – but if you do that, if you want to mute the audio you lose the signal to RDSSpy.

I’ve also found that I can run with just the MME version of the Audio Repeater. Set the Input to Line1 (VAC) and output to Microsoft Sound Mapper – and of course HDSDR to Line 1(VAC) – I found this out when I opened up the Soundcard options and found HDSDR was feeding the MME audio repeater by accident – instead of the KS Audio repeater. RDS Spy can then take it’s input from VAC 1 or from the Stereo Mixer input.

If you don't have StereoMixer (Win7 only) - you can google it and get the detail of how to enable it or it's equivalent - it may save you buying VAC

Checking and setting your integrated soundcard to 192kbps input sampling (as discovered by accident)

Open the the volume control and click on the speaker symbol to open up a multitab menu. If you see the words HD Audio in the description when you hover over that speaker symbol it should do 192kHz input sampling.
Click on the Advanced tab of the mulit-tab menu – and in the Default format you’ll probably see it set to something like CD quality 44.1KHz or 48kHz. Click the drop down button and scroll to the bottom – you should find the last option is 24 bit 192000Hz (Studio Quality) – select. If you don’t have that option but only 96000Hz – you’re stuck!

Having chosen the 192000Hz it was at that point I checked if I could connect direct to HDSDR when feeding the sound to the Realtek speakers without using VAC– and it worked! So the reason it wouldn’t for me before was because I hadn’t set this bit to 192000Hz even though Stereo Mixer was set to 192000Hz.

The wife owns an Acer laptop – no audio management software – but I had a quick look – and lo and behold! It has HD audio and I could set the default format to 192000 Hz. So all the set up can be done through Windows (7). [I might be trying to get that off of her!]

Hope this helps – and I would appreciate one or two users of HDSDR to check what I’ve done and reproduce it – as it means set up could be a lot simpler.

Rgds

33363. My June B2 2013 v 2014 Analysis

Yahoo group: SkywavesDX (2014)
Date: 2014-07-13 16:35:22 UTC
From: Andy Pritchard
Topic: 33363 Message: 33363

Hi All

Well we all know June was bad for Band 2 Es, but how bad was it?

In 2013 I had 760 (12.6 hours) specific minutes where I logged DX
In 2014 I had just 250 (4.2 hours) specific minutes

This equates to about 1/3 of band 'open' time where there was something new to log

In 2013 I logged 933 stations
In 2014 it was just 330

Again about a third

Could the reason for the subdued June Es this year be a combination of sustained high pressure over the UK in conjunction with a low sun spot count in mid June?

The following is a comparison of the number of station I've logged for each day in June (Note: the scale)

http://www.apritch.myby.co.uk/2013v2014JuneEs.png

Date: 2014-07-13 17:15:21 UTC
From: Jim Smith G0OFE
Topic: 33363 Message: 33366

I'm not sure we can put it down to a 'low sunspot count' – my own experience going back to the 80s is that higher solar activity tends to suppress temperate zone Es.

My own thoughts on the season :

I know some have had an excellent season (Paul Logan for one) but for many of us it has been a bit of a disappointment. June was particularly disappointing after a reasonable first 4 days or so, and the stats that Andy Pritchard quotes below are pretty reflective of my experience down here.

I know Janpeter has also found this season hard going, and I have also seen many comments on the 6m chat that it's been a quiet season for many in NW Europe especially away from the western coasts.

My other experience is that July is usually that bit quieter than June, and that poorer seasons do not generally improve in July, but think this year is an exception to that "rule".

One particular characteristic throughout this season, for me, is that time and again I found myself on the very edge of openings, with short openings lasting seconds before fading out for many minutes, then another 20 seconds followed by many minutes of nothing.

Normally, one would expect that sometimes things would be well open here while others in the UK found they were on the edge, and the law of averages meaning that there would be a 'mix', but the number of times I have been beyond the edge here…

At a rough estimate, for example, on each occasion that the East Sussex duo have had openings, it has reached here maybe once in two or three here 90 miles to the west.

My £0.02/$0.02/€0.02 etc…

Jim.

From: Radio Stations
Topic: 33367 Message: 33367

For me impossible to ID when there is no RDS, but maybe somebody can help?
They were in at the end of a probably very good opening from that part of Europe because at the same time I could hear:
Bulgaria
 BNR HR Botev RRTS Botev vrah 92 2 MHz

 BNR Radio Plovdiv RRTS Zdravets 94.9 MHz|
 BG Radio Plovdiv/Dzhendem tepe 94.6 MHz
Serbia
 Ema Radio Bujanovec 88.5 MHz|

 Radio Vizioni Podujevo 88.1 MHz|

Macedonia
 Kanal 77 Bukovik 92.3 MHz

all visible at my YT channel https://www.youtube.com/user/RBrDX

that applies to me in Congleton too

> I know Janpeter has also found this season hard going, and I have also seen
> many comments on the 6m chat that it’s been a quiet season for many in NW

I may be being "fooled" by all the absent b1 tv txs but I think i can
say band 1 is disappointing, Belarusian OIRT FM was pathetic compared
to last year, IIRC i haven't even logged the Grodno blow torch on 66.2
this year
Lwow 67.04 was pathetic this year i had to listen in 12k filters -it
was that weak

previous summers i have been able to sit outside with a portable
listening to Belarus for hours

> My other experience is that July is usually that bit quieter than June, and
> that poorer seasons do not generally improve in July, but think this year is
> an exception to that “rule”.

July hasn't improved for me. I concede the 3rd July "Belarusian
liberation day" opening was stunning. R5 was pretty much in all day
and the date meant that the programming logged that day was unique too
but one decent opening does not redeem a season!
and even on that day regulars like Grodno were absent or a faint
whisper, i mostly had to use 12k filters

when i started Dxing, all the textbooks written in the 70's by Simon
Hamer said that the start of July was the optimum time for long haul
multi-hop e skip
so I have to assume that this was once true, but I can't really say
i've noticed it since I became a tv dxer in 1994

for a time i planned dxpeditions to Aberdaron around this supposed
peak in an attempt to log TA- i never got lucky

> One particular characteristic throughout this season, for me, is that time
> and again I found myself on the very edge of openings, with short openings
> lasting seconds before fading out for many minutes, then another 20 seconds
> followed by many minutes of nothing.

yes! this is the most irritating season ever!!!
stop/start/stop/start - do i wait by the rx or go do something else?

Very interested to read everyones thoughts

ps: if the band comes to life a month after July 3rd- like it did a
month after the early June openings maybe we can re-consider the solar
explanation?

From: Paul Logan
Topic: 33363 Message: 33371

Thanks to Andy for compiling his results.

Things here are equally telling. The following is based on number of stations I have logged to FMLIST.

April 2014 compared to April 2013 down 100% (no openings)

May 2014 compared to May 2013 down 69% !!!!!

June 2014 compared to June 2013 down 43%

As you can see, April and May were really bad here. June wasn't that great.

The start of July brought two days of *fantastic* conditions but now its back to the doldrums with very little going on.

A few more like July 2nd / 3rd would be good! (680 stations heard, more than the entire log for either April, May or June)

Paul

Subject: RE: [SkywavesDX] My June B2 2013 v 2014 Analysis

I’m not sure we can put it down to a ‘low sunspot count’ – my own experience going back to the 80s is that higher solar activity tends to suppress temperate zone Es.

My own thoughts on the season :

I know some have had an excellent season (Paul Logan for one) but for many of us it has been a bit of a disappointment. June was particularly disappointing after a reasonable first 4 days or so, and the stats that Andy Pritchard quotes below are pretty reflective of my experience down here.
I know Janpeter has also found this season hard going, and I have also seen many comments on the 6m chat that it’s been a quiet season for many in NW Europe especially away from the western coasts.

My other experience is that July is usually that bit quieter than June, and that poorer seasons do not generally improve in July, but think this year is an exception to that “rule”.

One particular characteristic throughout this season, for me, is that time and again I found myself on the very edge of openings, with short openings lasting seconds before fading out for many minutes, then another 20 seconds followed by many minutes of nothing. Normally, one would expect that sometimes things would be well open here while others in

the UK found they were on the edge, and the law of averages meaning that there would be a ‘mix’, but the number of times I have been beyond the edge here…
At a rough estimate, for example, on each occasion that the East Sussex duo have had openings, it has reached here maybe once in two or three here 90 miles to the west.

My £0.02/$0.02/€0.02 etc…

Jim.

Subject: [SkywavesDX] My June B2 2013 v 2014 Analysis

Hi All

Well we all know June was bad for Band 2 Es, but how bad was it?

In 2013 I had 760 (12.6 hours) specific minutes where I logged DX
In 2014 I had just 250 (4.2 hours) specific minutes

This equates to about 1/3 of band 'open' time where there was something new to log

In 2013 I logged 933 stations
In 2014 it was just 330

Again about a third

Could the reason for the subdued June Es this year be a combination of sustained high pressure over the UK in conjunction with a low sun spot count in mid June?

The following is a comparison of the number of station I've logged for each day in June (Note: the scale)

Subject: RE: [SkywavesDX] My June B2 2013 v 2014 Analysis

I’m not sure we can put it down to a ‘low sunspot count’ – my own experience going back to the 80s is that higher solar activity tends to suppress temperate zone Es.

My own thoughts on the season :

I know some have had an excellent season (Paul Logan for one) but for many of us it has been a bit of a disappointment. June was particularly disappointing after a reasonable first 4 days or so, and the stats that Andy Pritchard quotes below are pretty reflective of my experience down here.
I know Janpeter has also found this season hard going, and I have also seen many comments on the 6m chat that it’s been a quiet season for many in NW Europe especially away from the western coasts.

My other experience is that July is usually that bit quieter than June, and that poorer seasons do not generally improve in July, but think this year is an exception to that “rule”.

One particular characteristic throughout this season, for me, is that time and again I found myself on the very edge of openings, with short openings lasting seconds before fading out for many minutes, then another 20 seconds followed by many minutes of nothing. Normally, one would expect that sometimes things would be well open here while others in the UK found they were on the edge, and the law of averages meaning that there would be a ‘mix’, but the number of times I have been beyond the edge here…
At a rough estimate, for example, on each occasion that the East Sussex duo have had openings, it has reached here maybe once in two or three here 90 miles to the west.

My £0.02/$0.02/€0.02 etc…

Jim.

Subject: [SkywavesDX] My June B2 2013 v 2014 Analysis

Hi All

Well we all know June was bad for Band 2 Es, but how bad was it?

In 2013 I had 760 (12.6 hours) specific minutes where I logged DX
In 2014 I had just 250 (4.2 hours) specific minutes

This equates to about 1/3 of band 'open' time where there was something new to log

In 2013 I logged 933 stations
In 2014 it was just 330

Again about a third

Could the reason for the subdued June Es this year be a combination of sustained high pressure over the UK in conjunction with a low sun spot count in mid June?

The following is a comparison of the number of station I've logged for each day in June (Note: the scale)

http://www.apritch.myby.co.uk/2013v2014JuneEs.png

Hi all,

what a rainy and boring afternoon today, here in Tuscany!
Nothing better than watching some fm-dxing videos and trying to identify some stations.
And, after watching on vimeo some John's videos about July 3rd, here's my suggestions.

88.1 1327 Virgin Radio Cote d'Azur (likely), 2 sts listed: advertising for Cote d'Azur
93.3 0749 RMF FM Bydgoszcz: same Queen's song as other sts you've logged
87.5 0821 Radio Radicale, Martina Franca/Monte Trazzonara (Ta): OM Massimo Bordin talks
90.3 0822 Rai Gr Parlamento Martina Franca/Monte Trazzonara (Ta): parliament session
92.4 0823 Radio Italia, Lecce Via Taranto 175: typical bumper between ads
100.4 0825 (likely) Kossuth Radio MR1, Szentes: hungarian talks
88.5 0828 Radio Radicale, Matera/Case Staffieri (Mt): OM Massimo Bordin talks
90.2 0829 Ciccio Riccio, Specchia ((Le): Voice ID
107.7 0835 Radio Maria, Ginosa (Ta) or Rotondella (Mt): YL talks
104.2 0841 Radio Margherita. Voice ID. NOT LISTED on Fmlist but in the website of Radio Margherita this frequency is suggested for the area of Oria (Br)
107.3 0842 Radio Radicale, Miglionico/Piano dell'Oste (Mt) likely: Voice ID
107.9 0845 Radio Maria, several txs listed most likely Rogliano (Cs) or Maschito (Pz), YL talks
107.4 0846 Cometa Radio, Lappano/Timparello (Cs): Voice ID
106.9 0848 Capital Radio, Parabita/Contrada Turrisi: typical bumper between ads

Thank you Franco. Appreciated again.

I am still compiling logbooks from other videos and am just about caught up. I did the 8th today. Loggings are on FM List. I will post them all in due course.

I will add your observations tomorrow (hopefully). So much going on here at the moment. All good, thankfully.

Good DX!

Hello;

At first a big CONGRATULATIONS to the Nationalmannschaft for the
impressive victory over Argentina ! Great game :)

I was inspired to listen to the July, 3. recordings With some German speaking stations- and most of them are now identified.

However, I have some problems identifying the second station on this recording from July, 3.
The first News lady might be HR3 News (not very certain about it),
but the second one might be recognizable on the dialect and the "pips" between the News items.
Swiss German ?

Hoping for reply,,

73!

Surely you you mean 'double malt' (whiskey)?

Anyway just to inject a serious note into this discussion

On July 2nd I got at least one double hop, if not two and possibly three on the OIRT band.

On 67.16 - confirmation via Skywaves forum that my mp3 file was Radio Rossi - so that is definite.at 2941km / 63 deg

On 70.85 - tentative as signal was weak and fading in and out but appeared to match web stream - same bearing as 67.16
On 66.98 - presumption that it was most likely NOT the 100 watt station from Nizhneye as that station (bearing 47 deg) is totally different direction. Khvorostyanka at 3243 km / 68 deg fits the general area of propagation at the time.

I can confirm that RCV at tx Monte Verde on Sao Vicente has moved from 87.6 to 89.1 MHz. And the other main QRG from Monte Tchota (Santiago) has changed a little from 91.6 to 91.7 MHz. I was several times on Santiago island and noticed these changes first in autumn 2012. About 2 months ago, after my last trip to Cape Verde, I updated the FMLIST of Cape Verde as good as I could.

From: Janpeter van Dijk
Topic: 33168 Message: 33407

Hi Chris,

All of your captures are on channel R1, not on E2. Even if you tune to channel E2 while this channel is empty, your TV will automatically detune to R1 if that has a strong signal. If you want to be sure of the frequency of the video carrier, you will have to use a scanner with USB option. And you will need a reference point to calibrate your receiver.

73, Janpeter

Hi Janpeter.

I have only my Yaesu FT-857D and a Kenwood RZ-1

I tune my Yaesu till I get the strongest signal and can with my clarify tune more accurate but I still have only maximum digits on my display. I can’t get the last Hz compared to Jürgen’s list.

Otherwise the radio is calibrated. I’m listening in USB-mode if it has any affection on the reception.

Here are some clips from yesterday on R1 and R2

33411. Re: [SkywavesDX] Clips from yesterday

Yahoo group: SkywavesDX (2014)
Date: 2014-07-15 07:45:12 UTC
From: Chris Thatcher
Topic: 33168 Message: 33411

Hi Chris,

The difference between E2 and R1 vision frequencies is only 1.5MHz. E2 = 48.25MHz, R1 = 49.75MHz. A normal "wide band" TV will not detect any difference, when tuning. Only a narrow band tuner (such as my HS Publications D-100) is capable of detecting the difference in video carrier frequencies.

I also use my Yaesu FT-847 to determine if a video carrier is present (before being at visible video level). In my case, I use the CW setting (not USB), to determine the frequency (eg. 49.740MHz is Lviv, with its dirty video carrier. 49.750MHz is Belarus. 49.758MHz is another R1 station). I don't know how other people are able nail down the frequencies any more accurately than this. It's a mystery to me.

73s,

Chris 2E0NDT

33412. UNID German 89.1 MHz from July, 3.

Hello Group;

I keep posting these UNIDs ...hope it is OK !

This recording is from July, 3 at 11.03 UTC (13.03 MEST).
Not much to cling on to, but:

-Skip varied within Bayern (Franken, Ulm, Würzburg) Hessen and West Austria (and Bodensee).
-On 89.1 not much listed in this area (if this particular log isn`t "out of target")
-seems "official" in the News (like ARD station, or DLF/DLR)
-second moderator distinct and might be wellknown (maybe DLF) ?

Maybe some of the German list members might recognize the speaker ?

73!

I used to use a 10 MHz signal from a GPS device for calibration. It produces weak harmonics on 40, 50 and 60 MHz.

Users of SDR# (SDRSharp) with the RTL dongle can now make use
of a databridge plugin for SDR#.
In contrast to HDSDR or SDR-Radio-Com V2 you don't need installation
of COM ports.

More info can be found on:

DF8RY: G3xDDC-CSVUserlistBrowser - News http://www.df8ry.de/htmlen/csvub/news.htm

Please read before installation the CSVUserListBrowser PDF file.

33417. Help needed with an English ID on 88.3mhz

Yahoo group: SkywavesDX (2014)
Date: 2014-07-15 21:20:15 UTC
From: BEAVAN SIMON
Topic: 33417 Message: 33417

I've a link attached to a short recording from 88.3mhz on 8th July at 07:00.

https://app.box.com/s/jkoek60xn64jx9xv8hck

I was mainly receiving Poland at the time and got this English ID , but try as I might I can't work out what is being said.

Can anybody help ?

Thanks

Simon

Cc: vhf-dx-sur@..., vhf-dx-carib@yahoogroups.com

FYI via SARL... Flavio PY2ZX

SARL NEWS SUNDAY 13 JULY 2014 (...)

VHF TRANSATLANTIC BARRIER BEING BROKEN

** After reporting on the massive effort on the trans atlantic VHF communication record news has broken during this week that this last bastion of the VHF bands has been half conqured.

Terry Gabriel, M0VRL, at Delabole, Cornwall, England, heard a weak JT65 signal, in and out of the noise, on 144,155 MHz around 11:53 UTC on Saturday morning 5th July 2014, which occurred during the transatlantic tests conducted by VC1T, a Canadian team. Terry has a big station and shares an IARU Region 1 Tropo distance record of 4106 km with D44TD in Cape Verde Islands, established on 144 MHz SSB. The distance between VC1T, locator GN37os at Pouch Cove, Newfoundland, and M0VRL, locator IO70po, is 3457 km! They are now using WSJT 9.7, which is the latest digital version available and feeding 800 Watts into a 43 element Yagi with a gain of 24 dBd.

Breathtaking news occurred on July 6th at 13:41 UTC when John Regnault, G4SWX VHF Manager of the RSGB, received a CQ meteor burst (FSK441 mode) from VC1T. It was confirmed that the received burst was in the format transmitted by VC1T. They started the 4 hours timeframe and no further information on chat or e-mail exchanged. During that timeframe G4SWX received 3 other bursts from which 2 were CQ and one other where only the VC1T call sign was readable. Screenshots from WSJT are available as well as maps from the current tropo situation on the North-Atlantic. The Hepburn Forecasts of the North Atlantic have indicated very poor Tropo Ducting conditions so far, but there is a chance that tropospheric conditions could improve from 11 - 12 July 2014 when the tests come to an end.

A terrestrial two-way contact between North America and Europe has not been achieved so far on 144 MHz, and it appears to be even more challenging than making EME contacts over a total distance of 800 000 km on this band.

You are tuned to a bulletin of the South African radio league ZS6SRL...

It sounds a bit like a Radio Jedynka (PR 1) ID to me at 34 seconds. There are two listed on this channel, Opole/Chrzelice with 60.3 kW and Siedlce/Łosice with 30 kW.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

33425. Wavre 101.1 still off?

Yahoo group: SkywavesDX (2014)
Date: 2014-07-15 23:07:12 UTC
From: nick gilly
Topic: 33425 Message: 33425

Can anyone confirm whether or not Wavre is back yet on 101.1? There's a bit of a lift to Belgium here tonight with Anderlues 99.1 and Tournai 101.8/102.6 at fair levels but no sign of anything on 101.1. In these conditions it should be easily audible.

Also hearing a London pirate on 87.5 called UK Raw which is a new one to me and not listed on Martin Payne's London pirate web page.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

Nick, the original antenna was damaged by arson and it now replaced by a smaller one. Repairs should take a few months.

Here's an article in Dutch with images of the current situation. There's more to find in Google ('RTBF Wavre emetteur'). Use Google Translate to have a 'reasonable' translation.

33438. Please help to identify two (arabic?) stations

Yahoo group: SkywavesDX (2014)
Date: 2014-07-16 17:18:02 UTC
From: benko.balazs@...
Topic: 33438 Message: 33438

Today at Budapest from SE, around 11:00 UTC I received the following two stations:

1.)
90.00 MHz (+-0.1)
PI:FFFF
PS:HO------

Recordings:
https://app.box.com/s/si8nk8tcurvliyqzth95 https://app.box.com/s/si8nk8tcurvliyqzth95

https://app.box.com/s/om37rpcgtyc2yhjnpx35 https://app.box.com/s/om37rpcgtyc2yhjnpx35
The language could be arabish(?)

2.)
88.60 MHz (+-0.1)
PI:F000
PS:Alkarmh_
(as I checked, it was received earlier by a russian dx-er at 88.50 MHz but no more data)

Recording:
https://app.box.com/s/fwmgjkvdim4efk10jp2c https://app.box.com/s/fwmgjkvdim4efk10jp2c

None of them were found on FMLIST (at least by me)

Thank you,
Balazs Benko
Budapest
HUNGARY

Oh bugger and w**kit.

I HAVE TO make a, error of some sort in my log at ALL times. "To err is to be human", as some human used to say. To f*ck it up altogether requires John Faulkner. If only you knew how angry I get with myself about these stupid little mistakes.

Folks. I am human. I make mistakes. It's what I do and I challenge anybody to make more than me! ;O)

I blame today's oppressive heat and humidity. Roll on winter.

What happened to Jack FM anyway? I thought they were hugely successful.

John

From: John Faulkner, Skegness
Topic: 33444 Message: 33444

Building slowly but surely.

Only Rangstrup from Denmark so far. The German tropo seems sharply focussed on Aurich and nothing else, but with full RDS. Holland and Belgium are best.

Streaming on TeamViewer: Login: 284684388 Password: 1htb67 This is set to "view only" at the moment with receiver control off.

Good DX!

John

Reverting to having the log in frequency order this time. Not sure which
is best to use, this or chronological order.

Finding it impossible to know which site I am receiving on some of the
Dutch transmitters now there are multiple transmitters on some
frequencies. The AF lists don't make much sense to me as they seem to
list everything on the network, rather than just for a specific region.

Sorry to disappoint Tim this time but the sporadic E from Hertfordshire
has gone now. It was good while it lasted. ;O)

Good DX!

33447. France into South Wales

Yahoo group: SkywavesDX (2014)
Date: 2014-07-18 09:03:24 UTC
From: BEAVAN SIMON
Topic: 33447 Message: 33447

I know it's not unusual (as Tom would say), for you Easterners, but just a heads-up to those in South Wales that France is coming in at the best levels I have known for a long time into Cardiff. French stations on virtually every spare frequency and battling with some of the weaker English stations on some that aren't spare.

Simon

33448. Early Morning Tropo

Yahoo group: SkywavesDX (2014)
Date: 2014-07-18 09:13:02 UTC
From: John Faulkner, Skegness
Topic: 33448 Message: 33448

The tropo was very short-lived here this morning. Good signals from Denmark and Germany with quick RDS from Aurich (44dBf) and Rangstrup (35dBf), without amplification. Everything had gone by 0900.

Not a trace of France here.

Good DX!

Hi John,

as usual, here's my humble tips about the "Italian part" of your recordings (July, 9th).
I have also listened to your recordings of Bulgarian, Serbian ad Tunisian radios but unfortunately I haven't been able to identify any signal.

But I think I can give you at least 3 or 4 very interesting suggestions:

92.2 1508 Radio 24, Villacidro/Loc. Giarranas (vs): slight traces under a Balkan radio (a bumper between ads)
91.8 1521 Radio Deejay (3 sts listed in Sicily): vocal ID
94.3 1522 Radio Mediterraneo, Chiaramonte Gulfi/Monte Arcibessi (rg): PI 518F
99.2 1525 RMC, Capo d'Orlando/Monte San Martino (me): host voice (Key Rush)
99.5 1525 Virgin Radio, Capo d'Orlando/Monte San Martino (me): PI 5241
102.6 1526 RTL 102.5, Capoterra/Santa Rosa –ca- (a lot of sts listed, but this is the most likely at that time): 5218 RTL102.5
103.1 1526 Radio Capital, Capoterra/Santa Rosa (ca): 5219 CA__TAL_
89.6 1529 Radio Deejay, Vico Equense/Monte Faito (na) : bumper between ads
106.9 1530 Radio 24, Caprarola/Poggio Nibbio (vt): news about economics, same as 107.9 at 1531
100.9 1536 Radio Zenith Messina, Messina/Pizzo Carbonaro (me): local adv for Messina area
94.7 1537 Radio Deejay, Sant'Antioco/Monte Cresia (ci): I recognized the hosts voices
100.2 1536 R 101, Rivello/Serra Roccazzo (pz) most likely location: Chris De Burgh's song, same as 96.6 at 1537
104.7 1600 RDS, Taranto/Via Principe Amedeo –ta- (most likely location): news commentary by Enrico Mentana (one of the most famous tv anchor men in Italy, who has a small feature daily on RDS)
104.3 1600 Radio Italia solo Musica Italiana, several sts listed (my 2 cents goes to Modugno/Zona Industriale): branch of an ID "…. solo musica italiana"
90.3 1604 Radio Gioiosa Marina Molochio/Monte Trepitò (rc): adv for a furniture store located right in Gioiosa Marina (Belcastro Mobili)

Concerning one of the Unids, at 1530 you listened on 104.8 (not on 104.7) Radio Base Agro Stereo with PI 540B and local news.
There is two different sites, according to Fmlist, into Salerno province.

According to his web site, they have two new frequencies who are not included in Fmlist (89.6 and 89.8) and they have shortened their name to a simpler "Radio Base" .

Concerning 104.6 at 1600, I saw you've listed M2O from Trento/Villazzano; but that's a little bit strange.
I've found on M2O website that they use this frequency also for Foggia province and that could match. Unfortunately this station is not listed into Fmlist (perhaps it's a new opening).

73's
Franco

I think you'll find it's on the transmission. If you tune away from 252KHz,
the noise goes away.
This sounds like a problem connected with RTE.

Thank you Franco.

All updated.

I see what is happening. I am missing some of the video by pressing the wrong key on my laptop. To advance the video in VLC Player, I hold down "Shift" while pressing the left or right cursor keys. This advances or rewinds the video by two seconds at a time. If I accidentally hold down the CTRL key while pressing these cursor keys, the video is advanced or rewound by one minute.

Best wishes and many thanks again.

John

Hi John,

> Unidentified:
> 97.7 1515 ? UNID, ? 7000 QURAN.TN. Presume Tunisia

Yes, another station waiting for a license. Radio Holy Qur'an, also from the Tunis area.

> 98.0 1516 ? UNID, ? FFFF RM-FM. Arabic phone in. Presume Tunisia

I have no confirmation, but most likely Radio Msaken from Msaken/Hatem (TUN)

Thanks Janpeter.

Both 7th and 9th July updated.

My Radio Mayak on 67.94 is just about right for the conditions of the 7th. I would assume this is very likely to be Cherepovets. Site logged as "Presumed".

Best wishes.

John

Hi,

Lots BEL logs in FNL but nothing at all over here. They were receiving stations very close to my QTH and I couldn't hear a thing. Same story for other dx'ers over here :-(
Very disappointing again :-(

It's looking VERY lively indeed.

Very high MUFs at the midpoint between here and Turkey right now but Spain is dominating, even though I am beaming ESE. Static crashes are getting stronger and stronger due to an approaching storm so I may have to unplug the aerial soon. How's that for bad timing?

33482. Trying for Vilnius 103.8

Yahoo group: SkywavesDX (2014)
Date: 2014-07-20 16:25:13 UTC
From: Tim Bucknall
Topic: 33482 Message: 33482

Its wierd no one ever logs Znad Wilii on 103.8 via e skip

its def on air

I wonder if People hear Polish and assume Poland?

I figure if Grodno is coming in, its worth a try...

ah!
no RDS listed! that could be it

no luck previous times and this time is no different

dzis nie jest Wilno :(

if any of you hear Polish Pop mx and no RDS on 103.8 try http://zw.lt/

its 22 years old this year

*Might have had it

had a weak female singer on 103.8 that sounded a bit like cerys
matthews, seemed to match www

checked radio nottingham, they were playing robert plant at the time

I don't know where you are in the UK
but for me 70% of my OIRT reception is Belarus these days

(or broadcasting to Belarus in the case of Euroradio 68.24)

FM List is essential http://www.fmlist.org

Expect most of your reception to be from a corridor stretching south
from Vilnius down to the Ukrainian border with Romania

Russia is possible mostly Kaliningrad, Pskov region and St Petersburg

if you're in the East of England you'll get Moscow, I never have

Pinsk 66.32, Lviv 67.04,

Hello;

From today`s Nice SpE-session,
I caught this "Hail Mary" prayer in the UNID Language.
As a main rulle, the Languages undidentified are always Albanian,
but ...not this time (I think).
Suggestions very welcome !

Hi Marc,

My suggestion.. idhaat al-aghwata" and "Laghouat" maybe mentioned ;) > ALG:
R.Radio Laghouat (Aflou-tx). At least close, hi.
It's a pity that there are no arabic truly speaking/understanding dx'ers
available (not talking about facebooks sw hobby listeners).

Hope someone who really understands can identify this. My suggestion, and
this has been logged also in Finland, five years ago (did not even check
the FMLIST ALG possibilities)

From: davebunyan@...
Topic: 33498 Message: 33521

Are you sure it was NOSTLGIA and not NOSTLGIE? If it is the latter then that could be Nostalgie Vlaanderen - 87.6 MHz - tropo has been enhanced.

Spain - Cadena Nostalgia has a PS of NOSTLGIA but not listed on 87.6
Italy - Radio Nostalgia has a PD of NOSTLGI but not listed on 87.6

Phone number is definitely identifiable as Poland PR2 though - and you may have picked up and stored part of a rolling text OR part of one station and part of another. I've found that happens when stations pop up in quick succession - so you may have the phone number of POL PR2 mixed in with another.

Lebanon (nice if it was!) is listed as having a PS of NOSTLGIE and is only listed on 88.0 ans 88.1

Hi

yes, it is the latter explanation which is the most credible, i have often seen "composite RDS" with bits and pieces from different countries, especially in cases of weak "E".so NOSTLGIA (definitely ending in A) was probably a short skip from Italy and combined with the telephone number from the Zamosc,PL station.

Thanks for your reply

pat

> Are you sure it was NOSTLGIA and not NOSTLGIE? If it is the latter then that could be Nostalgie Vlaanderen - 87.6 MHz - tropo has been enhanced.

>

Spain - Cadena Nostalgia has a PS of NOSTLGIA but not listed on 87.6

Italy - Radio Nostalgia has a PD of NOSTLGI but not listed on 87.6

>

Phone number is definitely identifiable as Poland PR2 though - and you may have picked up and stored part of a rolling text OR part of one station and part of another. I've found that happens when stations pop up in quick succession - so you may have the phone number of POL PR2 mixed in with another.

>

Lebanon (nice if it was!) is listed as having a PS of NOSTLGIE and is only listed on 88.0 ans 88.1

My FM log from Sunday of the stations that I could verify primarily by the RDS. I was surprised at the strength of signals, at times receiving the RDS signals even when the stations were only 100KHZ away from local stations and one Italian even drowned out a local Radio 3. I should have included the time but I didn't think to scribble them down as I was tuning. Not the largest log compared with the others but it is good to be back hearing signals again, I would love a fancy SDR radio but my battered and aging Sony 920 seems to be doing the trick for the moment. During the morning I had a lot of Arabic signals that seemed strong but with no RDS, I think they were all Algeria as I identified two of them but I was struggling to find webstreams to check, is there a reliable website for these?

I'd also like to add to this post my thanks to Andy about the tuning repair tip, I ended up ordering a control from Ebay and it works perfectly, I really cannot remember when the radio tuned so accurately. My next improvement will be to install a rotator, I've spotted some good quality second hand Yaesus on a ham radio selling page at a fraction of the cost of a new one so will likely end up buying on of those albeit too late for the Sporadic E but in time for any tropo openings this autumn.

Finally for the moment, I remember last year the group ran a skype room to swap reports in real time, is that still operating as I don't have it installed on my new laptop?

33528. No Auto-refresh on FM List Visual Logbook

Yahoo group: SkywavesDX (2014)
Date: 2014-07-21 08:31:26 UTC
From: John Faulkner, Skegness
Topic: 33528 Message: 33528

For weeks I have noticed my laptop will not auto-refresh the Worldwide Visual Logbook on FM List and I have to do a manual refresh. My main computer has been OK, auto-refreshing regularly, until about a week ago. I have to force a manual refresh (CTRL+F5) to bring it up to speed.

I am using Chrome / Windows 7 and I know of one other person who has been having the same problem, but I do not know their operating system details.

Is anybody else having this problem?

John

I got my first Italian studio feeders today too. I never usually look down there and did not expect the 9.2 to work down there at all.

Triple whammy actually.

Parallel to web stream at http://www.streamsolution.it/onair/RadioDelta.asx, RDS PI Code 5362 appeared on XDR GTK display and there was a clear jingle id!

Russian TV now in on Band I – either RTR or 1TV – logo is too smeary on top left hand side. Peak signal is not stable but around 49,739,580.

Cheers

Stuart

I’m using the HS Pubs VF-1004 which is rated for 45-70 Mhz.

61.3 MHz has been in as well. Sounds like RAI GR Parlamento with OM discussion in Italian however it was not // to the web stream; it was not Radio Galileo either. No decent RDS came up.

http://www.ukdx.org.uk/tv/feeders.htm is a useful link for Italian feeders. However to get in you need to hide your IP address – I use the hidemyass.com site which works well.

Cheers

Stuart

33541. Sporadic E Loggings for 20 July 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-07-21 13:37:27 UTC
From: Janpeter van Dijk
Topic: 168 Message: 33541

Hi All,

A very radioactive day yesterday. Around nine hours of sporadic E DX on Band I and Band II made this the biggest Es day of the season, with me being QRV.
Although generally the propagation was not spectacular, there were spells with fascinating propagation behaviour. For some time in the afternoon I experienced something I have not seen before. Which can be best described as ionoscatter. Resulting in the lower part of Band II being flooded with very weak signals that were mostly too weak to identify. This lasted for several minutes, after which everything disappeared. Then after some time the sequence was repeated, often from a much different skip area.
Also very nice was The DX-ers Dilemma. This is when Greece and Finland are coming in at the same time. What antenna bearing to choose then??

A couple of more of these days could still save the season for me.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Subject: [SkywavesDX] Sporadic E, July 20th.

My FM log from Sunday of the stations that I could verify primarily by the RDS. I was surprised at the strength of signals, at times receiving the RDS signals even when the stations were only 100KHZ away from local stations and one Italian even drowned out a local Radio 3. I should have included the time but I didn't think to scribble them down as I was tuning. Not the largest log compared with the others but it is good to be back hearing signals again, I would love a fancy SDR radio but my battered and aging Sony 920 seems to be doing the trick for the moment. During the morning I had a lot of Arabic signals that seemed strong but with no RDS, I think they were all Algeria as I identified two of them but I was struggling to find webstreams to check, is there a reliable website for these?

I'd also like to add to this post my thanks to Andy about the tuning repair tip, I ended up ordering a control from Ebay and it works perfectly, I really cannot remember when the radio tuned so accurately. My next improvement will be to install a rotator, I've spotted some good quality second hand Yaesus on a ham radio selling page at a fraction of the cost of a new one so will likely end up buying on of those albeit too late for the Sporadic E but in time for any tropo openings this autumn.

Finally for the moment, I remember last year the group ran a skype room to swap reports in real time, is that still operating as I don't have it installed on my new laptop?

Topic: 1778 Message: 33547

The Skywaves chat is still going strong. It's on Skype as "Skywaves Chat" or search for my name or Nick Gilly's.

As Jim says. Real-time alerts and tips, etc. You can send files, stream audio or video, etc., though we mostly just use the text chat. All welcome.

John

Hi Jürgen,

There seem to be pirate Radio Mariya's in UKR. I can't find any listing for your catch though. 70.97 MHz Olevsk is in any case a pirate Radio Mariya tx. Not a very weak one also with 4 kW TRP. Courtesy of ukrtvr.org

73, Janpeter

I heard 70.0 too and many stations from central Ukraine at the same time.
And I think it was not exact 70.00

33554. UNID from this evening

Yahoo group: SkywavesDX (2014)
Date: 2014-07-21 20:02:59 UTC
From: Jim Smith G0OFE
Topic: 33554 Message: 33554

Lots of short (<20s) weak bursts this evening, well below RDS levels and not enough time to grab a stream

Bits of Finland seemingly coming in at the time, only YSKI on 87.9 ID'd. Two TXs therefore unloggable

This is my one chance to ID a station this evening! - a station using the jingle

"This is Rock and Roll Radio - stay tuned for more rock and roll!" heard on 87.8

.

Anyone know who this might have been?

Thanks

Jim.

Yes just a handful of signals from the NE here although I could have sworn I heard a RAS 2 ID on 87.7 when I switched on. However, as the CD recorder was set to the digital input I failed to record it :-(

A couple of signals I did ID:

87.6 Radio City Tampere
87.7 YLE 1 Eurajoki the most likely site

All patchy and gone after about 15 minutes.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

Hi Jim, it is YKSI = 1, ONE ;). On 87,8 (you did not mention what countries were available/stations that time) that english slogan at least nothing from Suomi Finland on that fq, unheard slogan for me. If exist they should play legendary Finnish band from 70's named Hurriganes, that's rocknroll ;)

Hannu

33557. RE: [SkywavesDX] UNID from this evening

Yahoo group: SkywavesDX (2014)
Date: 2014-07-21 20:17:02 UTC
From: Jim Smith G0OFE
Topic: 33554 Message: 33557

OK thanks. It was not YSKI, didn’t match webstream.

Looks like a blank then.

Hey ho.

Jim.

Subject: Re: [SkywavesDX] UNID from this evening

Hi Jim, it is YKSI = 1, ONE ;). On 87,8 (you did not mention what countries were available/stations that time) that english slogan at least nothing from Suomi Finland on that fq, unheard slogan for me. If exist they should play legendary Finnish band from 70's named Hurriganes, that's rocknroll ;)

Hannu

2014-07-21 23:02 GMT+03:00 'Jim Smith G0OFE' radio@... [SkywavesDX] <SkywavesDX@...>:

Lots of short (<20s) weak bursts this evening, well below RDS levels and not enough time to grab a stream

Bits of Finland seemingly coming in at the time, only YSKI on 87.9 ID’d. Two TXs therefore unloggable

This is my one chance to ID a station this evening! – a station using the jingle

“This is Rock and Roll Radio – stay tuned for more rock and roll!” heard on 87.8

.

Anyone know who this might have been?

Thanks

Jim.

You can ignore this, because it came much later than I posted which was 15 mins before the time stated. It was most likely Sweden, which I also received on 87.9 with RDS Spy giving the PI Code. Now gone quiet.
Please Yahoo, post my messages as soon as I send them!

sleeper77, Southampton.

33575. UK-opening in Finland today

Date: 2014-07-22 11:46:36 UTC
From: harriku@...
Topic: 33575 Message: 33575

Starting around 10.25utc today, lasting a30 minutes. I tracked only RSL-frequencies 87.7 - 87.8, so no idea of
the opening area or MUF. (87.9 RSL-frq was blocked by Swedish tropo unfortunately).

87.7 Many Ramadhan stations with talk and music, at least 3 stations, no hope for ID.

87.8 Radio Ramadhan Walsall with PI: C795 and PS: RAMADAN. "From the heart of the Asian community.
This is Walsall Radio", altough id sounds like "Mansan Radio", but the given telephone on adverts 01922-
fits also to this station. Close to Birmigham?
I hope to know the power later - from a few watts till 20 W , or so?

Yesterday late evening Bretagne-stations and also one London pirate 30 sec with RDS: 95.4 Roots FM.
PI: CE33
Starts looking a bit better over Es here. (All heard with Utö-remote-rx: http://remote-fmdx-uto.blogspot.fi/ http://remote-fmdx-uto.blogspot.fi/)

Hi folks,

Here is a short video I made today (22.7.14) of reception on Band I (channel R1), via Sporadic E.
http://youtu.be/GKIqk7PHLwo http://youtu.be/GKIqk7PHLwo

I'm just uploading another shorter video to YouTube.

Unfortunately, YouTube makes the reception look worse that it actually was! I guess this is due to compression techniques used by YouTube.

From: Andrew Webster
Topic: 33581 Message: 33581

Last night I received Classic Rock FM on 87.8 with a PI:C0E5 and it is not listed there was a clear ID on my recording.

I found the webpage for this station or rather Nick did which is in Lithunania so listening to their stream the ID is the same as my recording.

Does anyone know anything about this station.
I will post a link to the recording when it's uploaded.

A nice Italian soup this morning followed in the late evening by a small teasing opening to Scandinavia/latvia/Lithuania.

Hi Harri,

Having lived in Walsall in the past, I can confirm the telephone code is indeed 01922.

Walsall is about 10 miles (16 Kilometres) north of Birmingham.

I have no idea about the station name. I don't receive it here in Lincoln, so I can't help you there.

I understand that RSL (Restricted Service Licence) radio stations are only allowed a maximum of 25 watts output.

Hope this helps,

Chris. Lincoln,UK

From: davebunyan@...
Topic: 33590 Message: 33590

I'm receiving Heart SX - pi code C364 on 96.8 - or to be more precise 96.82. I'm receiving it on both my Yamaha TX-930 and the RTL dongle - so it's not an overload problem on the dongle.
Strangely enough Heart SX on 96.3 in more ;like 96.28. Other stations on nearby frequencies are spot-on.

So can someone else check if Heart SX on 96.3 is offest? And is anyone else getting heart SX on 96.8 - or is it some odd mixing product being generated externally i.e. the rust bolt effect?

Rgds

David

Hi David,

Actually, I received this on 96.8 in London at the weekend. I put it down to an odd mixing product on my Tecsun PL-310, but seeing your email makes me question this now!

I can’t remember why, but I thought it was a mixing product of Heart Essex on 102.6.

Regards,

Martin

very interesting,

i looked at 96.28 & 96.3 on waterfall last night looking for a
carrier during hearts few audio gaps (listening to heart 88.0 as
guide)
but no luck

i was surprised i would have expected to see at least a trace from a
1kw tx at 263km
especially if it was off freq
I have logged 96.3 in the past but my aerial was slightly lower then
with better nulls of Gt Ormes head

i think Capital 96.3 from wales was enhanced and killing everything

will try 96.82

keep us posted

I've checked again this morning - and again just now. Heart SX on 96.3 is jumping around between 96.28 and 96.3 - on the same spectral display Radio Kent on 96.70 is rock steady - and beside it - on 96.81 or thereabouts is Heart SX - peaking best with the aerial to the north.

I'm no good at working out mixing products but with the strongest tx being 70dB I can't see it is a fault within the Yamaha which has a very robust front end. The RTL dongle has a double notch filter tuned to take out 102.8 MHz transmitter - and even with 20dB additional attenuation it is still there.

I'll have to give 96.8 a go here next time conditions are up although Wenvoe might be a problem.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

33622. Romanian pi codes changed?

Yahoo group: SkywavesDX (2014)
Date: 2014-07-23 18:19:41 UTC
From: davebunyan@...
Topic: 33622 Message: 33622

Something else interesting - a brief 10 minute opening around 1022 to 1032Z had the following stations in the RDSSpy log from the scanning radio

88.80 MHz PI:EE00 PS:RRACTUAL - a number of times
90.80 MHz PI:EE03 PS: IS 90.8 - a number of times with one full PS and partials
???? MHz PI:E000 PS: -------- - a mediocre signal

So does this mean Romania has changed from FF to EE - I can't see that the RDS decoding has gone selectively 'weird' on me. Can omeone close enough to get Romania confirm or otherwise?

Hi Tim,

95.8 is difficult as it is occupied by Absolute - and there is also a Heart transmitter on 95.9.

Thanks for the tip re:Crystal Palace offset - as set up (-9ppm offset) my dongle was giving around -3.5kHz - so a slight adjustment brought it into line.

Hello David,

I can confirm this, a few days ago romanian national radio changed PI codes.
FFxx -> EExx

RR1 Actual -> EE00: http://kep.ivpicture.hu/804543.jpg
RR2 Cultural -> EE01: http://kep.ivpicture.hu/804544.jpg
RR regional (like Radio Resita) -> EE03: http://kep.ivpicture.hu/804545.jpg

regards,
Jozsi from SE Hungary (about 20km far from romanian border)

FMLIST has just been updated. Finally, also the state-owned broadcaster respects the RDS standard.
The letter "E" at second position however is still not correct, it should be 2 for the nationwide programs.

Here's a video of the mystery station playing African music on 91.8 from earlier this evening. I doubt very much there are any clues in this (I tried to "Shazam" the song but to no avail) but here it is for the record.

https://vimeo.com/101574471

Could there be a station in Spain on the frequency playing this sort of music? Morocco was also received but none of the stations on the frequency were in //.

Forever a mystery no doubt, but an interesting one. /Still dreaming of double hop!/

33647. New member from Ireland and a question

Yahoo group: SkywavesDX (2014)
Date: 2014-07-24 09:37:03 UTC
From: Brock Whaley
Topic: 33647 Message: 33647

Hello and thanks for inviting me to the group.

I am in Holycross, Bruff around 20 km south of Limerick on the route 512. I have been DXing since 1966 and a broadcaster since 1971. I grew up in Tampa Florida, the home of daily gulf tropo and great E-skip openings.

I spent many decades in Honolulu, where I was able to receive both video and audio from New Zealand on their channel 1 from time to time. Those 49 MHz "baby monitors" didn't help the situation, hi hi.

I also took advantage of the yearly July tropo duct from Hawaii to the west coast of the U.S.A. During these openings, I could work the west coast with just a five watt handy talkie on 2 meters. In the summer of 1984, I was able to receive both picture and sound from KGO-TV U.S. channel 7 San Francisco during a record breaking period of this yearly event. Other amateurs worked the west coast on 430MHz and even 6 MHz wide NTSC amateur TV on 432 MHz established a two way contact.

I DX for pleasure and fun. At the other end of the spectrum, I enjoy long wave DX.

I have enjoyed the past two summers here in Ireland FM DXing, as well as 4 and 6 meter listening, and the ORIT FM band.

Most the equipment I have used is in storage in the states. For VHF and FM, I am now using a Fun Cube Pro + dongle. I find it very sensitive on VHF. I am building an FM yagi at the moment with element rods I found at the B&Q.

Until I complete the yagi, I have been using a pair of amplified indoor "rabbit ears" antenna. These seem to work fine for e-skip. On ground wave I am able to hear both the Shannon and Cork aviation ATIS VHF weather broadcasts, and I have 24/7 reception from the BBC North Hessary Tor transmitter. Not bad for an indoor antenna.

I do have a question, If I may. I have a Kworld TiVme television dongle. It works fine on local UHF digital reception. Is there any way to eliminate the "green screen" and/or adjust the gain on Band 1 on this dongle? Early last night I had a huge video carrier on channel R1 along with corresponding audio up the band on the FCP+ dongle. However, when I set the dongle for analog antenna reception, and entered and saved the R1 video frequency along with SECAM D/K, all I saw on the dongle was a green screen. Is there something I can adjust or enter on the dongle to give me good old fashioned "snow" and maybe resolve a signal on a weak channel when e-skip is in?

Thanks in advance for your advice, and I look forward to contributing to the group.
Regards,
Brock Whaley
WH6SZ

Well, I couldn't find anything which matched this format from Spain, though I realise that would be difficult to know for certain, but the surrounding conditions were interesting in that the Essaouira transmitter from Morocco was coming through shortly after this, that's 2508 km and I see there was also a Canaries report from Andy Pritchard a few minutes after that time.

Continuing the propagation path from here through Essaouira would put this down into Mauritania, Senegal or Guinea, etc. OK. It's a bit of speculation but I'm sure I will probably never know who this was. There's just nothing to go on.

Hello Gianni.

Definitely not these. As I mentioned, I checked all Moroccan streams and they were all different. I doubt this is the kind of music they would be playing in Morocco. It is more like something you would hear from west Africa.

Some patchy Es here over the last 45 minutes or so with the following stations IDed:

87.7 YLE 1, probably from Eurajoki

87.8 Top Radio, Kakenieki, Lithuania with dance music
87.9 SR P1, several sites listed
89.4 Radio Pori, Pori in parallel with web stream

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

I received this on Wednesday and wondered if there is a Spanish based RNE 3
not listed on FMList?

90,0 RNE Radio 3 is listed on Izaña Canary Island and on Puebla de Almenara Province of Cuenca, continental Spain.
Good log indeed!

I wondered this too. The conditions started weakly in SW Spain and then moved into Portugal. Then the DX disappeared for 12 minutes and a solitary Spanish station appeared on 90.0. It was weak and not strong enough for RDS. After some searching and checking the web audio from RNE 3 I concluded that it must have been the Izana transmitter. The Cuenca transmitter is listed with 500 watts and I am sure there would have been other stations from that area had the band been open there. It seems to make sense.

** Personal Skegness 'First'

Today I heard my first Italian studio links. I never expected to hear
these as my 9.2 is not fully resonant down there.

The opening to Italy was a challenging one this time as several parts of Italy were coming in at the same time, so I won't be surprised if I have made one or two errors on the transmitter sites, but I did the best I could. All this detective work adds an extra dimension to the hobby which is actually quite enjoyable.

33688. What Polarisation for SpE? - observations

Yahoo group: SkywavesDX (2014)
Date: 2014-07-26 14:59:44 UTC
From: davebunyan@...
Topic: 33688 Message: 33688

I've analysed my logs for SpE reception for 2014 - for which I use horizontally polarised aerials - and was surprised to find that the majority of signals received are listed as vertically polarised.

In 2014 on 88.7-108 MHz it breaks down as follows:

Horizontal - 280
Vertical - 333
Mixed - 73
Circular - 6
Not stated - 122
Total - 814

Looking at the identifiable stations from my scanning log it breaks down as follows - with a lot of low powered stations logged. (Scanning logs started 02 June 2014).

Horizontal - 46
Vertical - 146
Mixed - 25
Circular - 1
Not stated - 73
Total - 292

So I've re-configured the scanning receiver so that it is fed from the vertical aerail - which has a cardiod pattern so I get coverage from around NW all the way round to SW. It will hopefully mean I'm more likely to pick up all the openings strong enough for pi code decoding. Or it will be a disaster and suggest that vertically polarised signals are prone to polarisation skew. Either way it will add to my knowledge and understanding of propagation.

I'll still be doing the main receiving on the horizontal antennas of course.

From: Chris Thatcher
Topic: 33688 Message: 33689

Hi David,

In my experiments with V vs H polarisation on Radio Australia, I had one radio receiving 11.945MHz, using a Wellbrook Loop (which favours V), and another radio receiving 11.945MHz, using an H dipole. I assume the transmitted signal is V polarisation.
When listening to the output of both radios at the same time, I found that at any given moment, one or other receive polarisation was favoured. So, I concluded that, unless direct ground wave (or tropo) signals are being received, it does not matter what polarisation your antenna is. So, it would seem, for Sporadic E, it is best to use the polarisation which most attenuates your local powerhouses.

On HF, vertical polarisation gives noisy reception results in built-up areas (due to its 360 degree pick-up), but is great when /mobile, away from built-up areas, due to a good low angle radiation pattern and 360 degree receive. So, in essence, vertical polarisation has its pros & cons.

73,

Chris 2E0NDT

Somebody posted a link to an in-depth article on this very subject not long ago. Maybe somebody knows this link (my email searches never work properly - I just tried). The article included audio which demonstrated two different receivers, each fed by separate aerials, one horizontal and the other vertical. The audio from each was split between the left and right channels on a stereo signal and the resulting audio was quite psychedelic. That's all I can remember about it, apart from the theory which stated that sporadic E is constantly changing in its polarisation and flips from vertical to horizontal (and maybe everything inbetween too). The practice is of course often very different and my own experience has always been that horizontal is better for sporadic E. I never had much luck when my aerials have been vertical.

33693. Short UK-openings on many days in Finland

Yahoo group: SkywavesDX (2014)
Date: 2014-07-26 17:32:53 UTC
From: harriku@...
Topic: 33693 Message: 33693

During the past week I have observed many short UK-openings bringing up some more identified low power stations.
During the past days conditions on 20.7 / 22.7 / 23.7 and 26.7. Not long lasting.

On the 23rd July 2014
89.1 Big City Radio, Birmingham. 50 Watts. Nice id with only one minute opening.

26th July 2014
87.5 Raw Radio, London. Pirate with RDS-PS RAW Radio. Keep It Locked" PI 8750
I heard it also on 20.7.2014. Also Rude FM, London 88.2. PI: CEB7.

87.7 tentatively Donington FM, Derby. Speaking about the race going on. This is the only race-station on air in Ofcom-list and there is today National Motorcycle Races In Donington. I am waiting for their QSL.

87.7 Radio Ramadhan, Slough with religious talking and spot to Periganos Grill

Chicken, Slough etc. Full RDS. "Ramadhan" PI: C995.

I am more and more starting to believe that the is a role with large weather conditions on creating Sporadic E, among the sun of course.
The end of the June was the coldest ever and the worst ever on FM in Finland. Now the

weather here (and over Scandinavia?) is the hottest in 50 years and we have openings to

UK strangely often.
I understand that the local weather has nothing to do with Es - and that the weather is under airplane-level (10 km) and Sporadic E is 100 km.
But perhaps there is a connection?

Likewise Harri.

Many opening to Finland from here this week.

If local weather play a roles in our sporadic E reception, you would have to imagine that it plays the part of some kind of up-link or down-link into/from the skip zone. Probably the scientists here are laughing at this one, but there have typically been nearby thunder storms throughout most of my Es openings this season - something I have noticed frequently in previous year's Es seasons. Coincidence? Yes, probably, but one to throw into the mix.

The weather this past week has been mostly settled across most of the UK, but the high temperatures have been pushed back here on the east coast by refreshingly cool sea mists. While most of England has been basking in temperatures of up to 30C, we have mostly been stuck at 15C. When the mist has burnt off though we rocket into the mid 20s. It has been 24C here today but hotter elsewhere.

Regards.

John

Yes, that is what I am thinking, some kind of uplink-downlink from troposphare to ionosphare.
That is basicly an idea of one ham here telling about the possible "jet streams"...

This is kind of funny. After almost 40 years of FM-DXing I am still struggling with the same
big basic questions, which never leads nowhere :)

Yes, that is what I was thinking of - uplink/downlink from troposphare to ionosphare.
That is basicly an idea of one ham here telling about these possible "jet streams"...

This is kind of funny. After almost 40 years of FM-DXing I am still struggling with the same big basic questions, which leads nowhere :)

From: harriku@...
Topic: 33395 Message: 33701

I missed this FM-opening because at the same time I observed Irish church-signals on 27 MHz via Sporadic E. And also first time in the evening-time. Not many up. Signals are fading in and out much more than via F2.

But now in the evening I have almost all FM-frequencies blocked in Utö by close-tropo. The variation over Baltic Sea is huge. The Band can be almost empty and at the other time very full (during high-pressure).

33702. Tuners that display PI codes

Yahoo group: SkywavesDX (2014)
Date: 2014-07-26 20:11:59 UTC
From: nick gilly
Topic: 33702 Message: 33702

Hi all. I think I may have asked this before but I'll try it again in case anyone could help. Does anyone know of any good tuners that display PI codes other than the various Sony models? I thought I read somewhere that a few Yamaha tuners did this but I've not been able to confirm it.

Thanks and good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

almost certainly Llandinam in that case :-)

who else is getting it?
surely our Shropshire contingent? Wigan?, stockport?

when i heard birdsong on fm i thought i'd somehow travelled back to 1992!

driving home from the roaches yesterday it was coming in well on the
Eastern side (wrong side) of the peaks, but on the West side
Manchester 102.0 completely splattered it out of existence

at the roaches i ignored this suspiciously strong signal on 102.1 for
ages assuming it was a mixing product of 102.6 + 103.1 (wrekin is
visible to the naked eye from there)

I can hear that birdsong on 102.1 on the splatter from Captial 102.0 tuning to 102.15 brings it in better this is on the vertical dipole.

great stuff, i assume you're the furthest log of this so far?

its not as classy as Classic FM's birdsong tests, theres a lot of
background noise, lawnmowers, cars etc!

but it did bring back memories!

Just very weak classical on 88.0 a few minutes ago, possibly YLE 1 Joutseno, but it didn't sound like it was in parallel with the web stream. That's it so far.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

Well that was yet another opening of almost the same! The main
difference is that there was no St Petersburg on band 2.

It was all very weak and virtually everything had to be identified by
web parallels. It's interesting how so many of us are having the same
experiences with these openings. The same areas received for a week or
more.

It's still lingering.

Good DX!

John

Yes, today again signals from UK.

This time nothing on my Utö-remote in very SW Finland! Strange.

But nice signals in my Middle-West Finland-remote, like BBC Suffolk 959,
but not huge signals there (but my antenna is 5-el V-yagi there).

I think it has been better in East-Finland.

It looks more like that the extremely hot high-pressure (hottest here in 50 years)
over Scandinavia is causing this.
Perhaps this warm air is warming E-layer and makes this effect??

We had short, under 1000 km skips today. Norway, Denmark, Poland.

Yes, that would make sense Harri. After all, it is the warmer summer months when sporadic E mostly occurs.

With all the historical data we have now perhaps we could correlate some out-of-season Es openings with similar weather patterns.

Mid winter Es occur also around times when the weather can be the opposite - i.e. turbulent due to mid-winter storms. The UK had more than its fair share of these last winter, but if this acted as a reflection point, we wouldn't have been well placed for anybody to take advantage. If the storms had been over central Europe though ... ??

It's often all guesswork and speculation but we all wonder how these things happen the way they do.

As I type, OIRT remains open but only the Radio Rossii transmitter in Muyazerskiy on 72.17 is heard. It's very weak and there is nothing else via Es anywhere.

Good DX!

John

yay! ST petersburg R1 , i get to hear how evil i am, that always makes
my sunday :-)

the hot summers have always given the best e skip IMO

wonder if theres a bit of a lift about?

was looking for finland, using the R9500 on Band 2 for the first time
in a while,
sometimes the extra gain compared to SDR comes in handy

Its a good spot here for getting Welsh TX's but no reception of Radio Hafren 102.1 here. Blocked by Capital Fm, Birmingham on 102.2.

Hello

The band has returned to flat conditions here but I have been getting a station on 87.7 playing oldies no RDS and I have not heard DJ or any announcements. Not the ususal Birmingham Pirate station music.

Can anyone else hear it? Any Ideas?

Just heard an ID:- BCMR ??

Topic: 33688 Message: 33729

Hi John,

I can't find the article either but as I don't wish to miss out on potential reception I've done a bit more re-arranging. I have the original ST-311 back on the horizontal rotatable aerial and another ST-311 on the 3 ele vertical Moxon. So I should have a fairly direct comparison when some more SpE makes it's appearance - provided both tuners have similar performance.

It's like an oven in the loft where all the connections are!

I'll collate the data at the end of August - to allow sufficient observations.

Rgds

They also have a very basic website:

http://www.bcmr.moonfruit.com/

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

Same Russian transmitters as this morning, but with a couple of additions from Belarus.

Some good signals too so maybe band 2 isn't far away.

Good DX!

John

33737. Sad day

Yahoo group: SkywavesDX (2014)
Date: 2014-07-27 19:59:27 UTC
From: BEAVAN SIMON
Topic: 33737 Message: 33737

The chimney stack had to come down today and for the first time in 25 years this :-

https://app.box.com/s/cjzsp5vtxnl499un75md

my beloved band 3 antenna will not grace the Cardiff skyline.

OK. It hasn't actually been connected in over 10 years, but the memories of almost daily French TV in colour and the joy when German test cards came through on the old Salora multi-standard are still strong.

The problem is , that the Band 2 antenna was going to go on that chimney stack. I've no idea where it is going to find a home now.

Simon

33738. FMLIST

33742. how to receive Radio Hafren 102.1 from a very long way away

Yahoo group: SkywavesDX (2014)
Date: 2014-07-28 10:06:22 UTC
From: Tim Bucknall
Topic: 33742 Message: 33742

Szanowny Panstwa!
lets try a little experiment, :D
I'm timing the Voice/birdsong loop so you guys can listen to 102.1 NFM or 102.099 USB mode/102.101 Lsb mode

the very brief period of dead carrier/voice announcements happened at 10:46:45

11:01

so roughly every 15 minutes, so listen at 11:16 in the narrowest mode you have

you should be able to detect this from stupidly huge distances

when the 50 watt Cymru tx on 103.8 drifted down to 103.776 JF could detect it on the east coast, i estimate 102.1 to be about 1kw

I will give this a go once the Es have died away. Might be later though as I have to go out soon.

I already looked for this yesterday but 102.1 is controlled by Studio Brussel most of the time, even when beaming the opposite way. Egem is typically at RDS levels most of the time now, but it does drop down regularly, though never quite disappears.

I can't see me getting it here. A lift would give me an opportunity perhaps. I can receive stations like Swansea's Wave 96.4 and Carmarthenshire FM here, but the problem is always going to be Studio Brussel.

Did Radio Hafren used to be Radio Maldwyn?

John

33747. Es Italy Band 2

Yahoo group: SkywavesDX (2014)
Date: 2014-07-28 19:15:47 UTC
From: nick gilly
Topic: 18797 Message: 33747

Started a few minutes ago but patchy at best.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

33748. European Hit Radio 68.24?

Yahoo group: SkywavesDX (2014)
Date: 2014-07-28 19:32:21 UTC
From: julian@...
Topic: 33748 Message: 33748

A brief OIRT opening this evening, 18:15z gave me the briefest rx (Ohrenblick? :) of four stations, including 65.90 Veselovka // 66.02 pres. Kaliningrad, 69.26 Geranyony, and a power pop px on 68.24 pres. European Hit Radio, Visaginas . It didn't last long enough for an ID or webstream check but European Hit Radio website showed the px Hitu Non-Stop and can be streamed on http://www.european http://www.europeanhitradio.lt/live* hitradio.lt/live http://www.europeanhitradio.lt/live *(delete the gap which I added because Yahoo is trying to embed the link)
or http://82.135.234.195/EHR.wax http://82.135.234.195/EHR.wax
The webstream had IDs as European Hit Radio and the news had several mentions of "Belarus". FMLIST shows this as Russian-language Euroradio, 'ex European R for Belarus' so I presume the px is intended for a cross-border audience.
Can someone confirm that EHR is on 68.24?
- Julian, Stockport

33749. Re: [SkywavesDX] Es Italy Band 2

From: nick gilly
Topic: 18797 Message: 33749

Well that lasted all of 10 minutes. Stations IDed include m2o on 87.8 and Radio Potenza Centrale on 88.9. Some good peaks on some signals but they were widely spaced e.g. 87.8, 88.3, 88.9, 89.4, 91.1, 93.3, 94.3.

I think that's our lot for tonight.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

33755. Interesting Logging 29 Jul 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-07-29 13:50:57 UTC
From: davebunyan@...
Topic: 33755 Message: 33755

From the RDSSpyLog on the scanning ST-311 four stations captured over a 20 second period

10:32:38 - 10:32:42 PI:D3C3 PS:__MD---- 87.7 MHz - only possible freq
10:32:42 - 10:32:47 PI:2709 PS:R---VE-- 88.8 MHz - only freq in scan range
10:32:47 - 10:32:53 PI:3211 PS:POLSKIE_ 89.4 MHz - PS locked into tuner
10:32:53 - 10:32:59 PI:D3C2 PS:MDR JUMP 89.8 MHz - 99% certain this freq.

1. MDR Figaro, Chemnitz, 851km, 100kW
2. CR0 Sever, Ust nad Labem, 944km, 100kW
3. PR1, Krakow, 1367km, 60kW
4. MDR Jump, Chemnitz, 851km, 100kW

No other DX present and nothing 30 seconds later (frequency scan takes 27 seconds is there are no station detected). The RDS SpyLog is set to drop the PI code after 3 seconds and the tuner stays of frequency for 4 seconds of the station is strong enough. This allowed all four txs to be confirmed based on the fact that the tuner had captured the PS into memory for the Polish station.

My best guess is that this was all from single meteor trail running parallel to the aerial direction- as looking at the reception path on FM Visual Log - they are pretty much in a line.
There is a small possibility that the MDR Jump station could have been 89.9MHz, Camburg, 763km, 0.2kW.

Apart from that - SpE reception remains dire - with only a 15 minute opening to Italy yesterday evening (28th) and 'nothing' for the 24th-27th.

Excellent meteor log Dave!

I wouldn't rule out Camberg just because it is lower power, but Chemnitz should easily be possible via MS. Interesting that they were all in a line with each other. So MS must work in the same was as Es. Does anybody have any further knowledge of this?

There have been some long bursts around. I caught two stations yesterday morning on 87.6, right out of the blue and from the same burst, NRK P1 from Nordhue, immediately followed by SR P1, Storumen. NRK P1 was identified from it's regional PI code of F801, and SR P1 thanks to receiving some of the AF list. Guess what ... the two transmitters are on virtually the same bearing. I have never noticed this effect before.

Hi John,

As we are just starting into the period when the Perseids are active I'm anticipating getting some interesting results from the scanning from M-S.

I just wish I could get the frequency from the tuner into RDSSpy automatically!

Attachments: 2 described; binary payloads are missing from this source WARC

New FM antenna. E 20 at the hardware store. Not pretty. Two pictures are attached. One with my cat FM helper. Regular stereo reception of BBC Radio 2 on 88.1 and BBC Radio 4 on 92.5. These are in Wales at 240 miles away. I don't understand the constant reception unless low level tropo is there all the time. No luck so far with Dublin that is half the distance to the north. I set it on top of a ladder last night and had tropo from France and Germany until sunset. Depending on its direction, ATIS full quieting from Shannon and Cork, plus a VOR from Plymouth. It's cut for resonance at 88.0 for e-skip. This morning at 7, BBC and Classic FM in up to 100 MHz. Not too sturdy, but I'm happy with the results. Just three elements with a gamma match into a FCP+ donge.

Hi Brock,

Congratulations on the results from your home made antenna.

I think you'll find that the BBC on 88.1MHz and 92.5Mhz will be from Devon (North Hessary Tor, 120kW mixed Polarisation), not from Wales.

73,

Chris 2E0NDT

Hello Brock.

This is exactly the sort of thing I want to build for mobile use. I have also been experimenting with telescopic elements as I am trying to make something which will fold away into nothing after use.

As Chris says, the transmitter you are receiving will almost certainly be North Hessary Tor on Dartmoor. The mode of propagation will be aircraft scatter too. You should be able to correlate reception peaks with the flight paths of planes at the midpoint. http://www.flightradar24.com If the reception has little fading then it will be full blown tropospheric ducting.

Looking forward to reading your reports.

Good DX!

John

Thanks Chris,
I am also receiving 89.9, 94.3, and 101.7 that I think are in Wenvoe. The are usually even in strength to the previous BBC outlets I mentioned. Even with no other signs of tropo, and nothing on this path on the Hepburn maps, these signals are always in. It reminds me of dependable UHF analog TV reception when I lived in Tampa Florida. But that was much closer to the water than I am here. I was used to high power (100 kw) FM stations being heard on a regular basis out to 100 miles or more, but the 200 + mile distance at anytime day or night in the case of these BBC transmitters has me stumped. Of course at times these BBC transmissions are overrun by strong e-skip openings.

It is nice to have a Radio 4 alternative to cricket tests on long wave. As you might imagine, 198 KHz has a huge signal here, even in the car.

On another matter, the Irish landscape here is full of un-used Band III TV antennas. I wonder of they could be used for DAB DX? or, if it would be worth the attempt?

Regards and happy tuning,
Brock

Hi Brock,
great to read about your dx over there, are you familiar with FMList?
I would love it if you could do a bandscan,

Yes,
I will undertake a band scan now that the yagi has been built. I can locate limited, temporary, and restricted stations using the Irish government lists. However, there a few stations, such as a dance format from Cork on 87.8 and church re-broadcasts in the 105-107 MHz range, I have been unable to track down in terms of location and power used.

I spent hours this past winter on a daytime ground wave list (10 AM-2 PM local). I have the use of disconnected electric fence antennas for use on long and medium wave. The amount of stations heard, both high powered at over 1,000 miles, and 200 watt local stations at hundreds of miles was amazing and great fun to ID.

There are so many low powered RTE transmitters here that many frequencies are full up, until e-skip overcomes them. Using a 70KHz bandwidth on the dongle helps a great deal in separating adjacent signals. Even tighter filtering helps on the ORIT band signals.

A band scan will be on its way, once work permits.
73's and happy tuning!
Brock

33770. Re: [SkywavesDX] Re: 20 Euro yagi

Yahoo group: SkywavesDX (2014)
Date: 2014-07-30 12:32:23 UTC
From: Chris Thatcher
Topic: 33763 Message: 33770

Hi Brock,

Yes, the unused Band III antennas should be suitable for DAB DX, especially if they are not channelised (eg, they are wideband E5 - E13).
DAB multiplexes use the same channel numbers as were previously used on European Band III TV.
For DAB, each Band III channel is usually split into 4. Eg, channels 12A, 12B, 12C & 12D. This is the same as channel E12 was for TV, and so on.
In Ireland, the Band III channels were categorised as letters (D - J, I believe). The required antennas would, most probably have needed to be wideband, as both RTE services were often transmitted on Band III, requiring a separation of several channels. This would make the redundant Band III antennas most suitable for DAB reception.

From: Janpeter van Dijk
Topic: 168 Message: 33771

Hi All,

Some great tropospheric Band II conditions yesterday evening. Spot shown on the Hepburn maps, which showed a colored narrow corridor from Northern France into Scandinavia.
There was very little movement of the skip area, all that happened was that the Swedish DX signals became stronger and stronger. Until a level that even Sunne reached RDS levels and Bäckefors overran Lopik. Never saw that before.
One of the treats of the evening was receiving Radio Globus from Toftlund-Lindholm with no less than 33 dbf signal strength (no boost used). This tx must be running more than the 80 Watts listed.

I am still very exited about the Sony XDR / 15.11 / GTK software combo. Together this makes a magnificent DX set-up.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands

Chris,
Thank you. Most of the Band III antennas here seem to be wideband. That is several directors with a wide variance in length. As I get to know those in the neighborhood, I should be able to ask permission to remove one. They are just hanging up there, and all present digital TV is using their UHF yagi, as well as a microwave antenna for additional channels or a small satellite dish. I can't imagine being stuck with just the Irish TV offerings. Have ladder will travel.

I'm sure this is full of un-told loss, but I have connected to coax lead from my yagi to the elements on an indoor amplified antenna. The Yagi is outside setting on top of a step ladder as I experiment with various directions. The Wenvoe programs are now full quieting with no tropo or e-skip noted at 1400 Z. While they are out of the yagis coverage, the ATIS airport XMTR's at Shannon and Cork are almost full quieting. I used alligator clips to find the "sweet spot" on the extended rods and clip the yagi leads there to find the most gain on 92.5 and 94.3 for Radio 4.

I use a Belkin auto FM transmitter to gauge signal strength as I rotate the yagi. I feed audio from the laptop to the XMTR on unused 105.9 and listen on a portable Sony as I make antenna adjustments.

I am by no means an expert, and do not have the equipment or expertise of many of you, but I am having fun.

I imagine it would be quite a challenge to hear U.K. DAB stations outside of a large tropo opening. It does not appear that much outside of RTE is in the Limerick foot print. I may give it a shot anyway.

Watching the maps and this list for possible openings. I check a couple of times a day anyway. 1800Z seems to be a hot hour for e-skip here.

Thanks again for your advice. Again, I'm not a die hard expert, but do get a thrill my girlfriend will never understand when signals roll in. Hi, hi.

Regards, and happy tuning!
Brock
County Limerick

welcome to the group Brock.

A few comments, the dance music station you get on 87.8 and the FM band church transmitters you received are pirates so unlisted.

(there are some licenced church transmitters on a band between 27.6 and 28 MHz HF, almost all, if not all, are NFM rather than AM, give it a try Sunday mornings)

regarding the good results from North Hessary Tor , I would be of the opinion the presence of a 2000+ feet high mountain in the distance in the signal path is helping the reception, so-called 'obstacle gain' or knife-edge diffraction. I think its the Galtee mountains in the path which you can surely see in the distance. A good signal hits the very top, only a small bit of that diffracting over can be enough for reception in a distant zone line-of-sight with the mountain top perhaps around 20 miles the other side . The effect is more likely with mountains with sharp peaks rather than rounded tops, the mountain top having a clear view to receiver and transmitter (not seeing as far as Devon though, but a clear path out to sea in that direction)

http://mysite.verizon.net/k3nco/diffract.jpg http://mysite.verizon.net/k3nco/diffract.jpg (picture on the left)

Best wishes with the FM DXing, bear in mind that the majority of FM transmitters in the Republic are vertical polarisation, not mixed like in the USA and UK (mostly). There are a few exception, such as Spirit 89.8 and 4FM on 104.2 near you in Limerick are I understand mixed polarisation)

I already read your interesting contributions of MW/LW reception conditions in your area to World of Radio
- I would comment about your AM bandscan on this page:
http://www.w4uvh.net/dxld1426.txt http://www.w4uvh.net/dxld1426.txt
no sign of 801kHz BBC Radio Devon, but 810kHz BBC R. Scotland is listed, I would have expected the former to have been received before the latter there by day, could you have confused 801 with 810 (could easily happen!) ?

again welcome to the group and looking forward to reading your DX findings in the future (I'm near Cork city and may be able to assist with IDing anything (from within Ireland) unusual

Thank you for you're welcome. I can see the Galtee's from here, and that is the direction where I receive the highest gain. As this distance, I would not be surprised if knife edge comes into play. The signals are almost local like during tropo, and I as I have mentioned are quite listenable even when all enhancement is flat.

I am have logged quite a few church broadcasts in the 27 MHz range. The vertical radiators on the top of churches aren't hard to spot. I see there is a master list of there on line, But I have heard a few below the bottom cut-off frequencies on the list. None of the lists I am aware off lists the FM broadcast band XMTRs.
I heard one or two 27 MHz FM church transmitters in Atlanta when I lived there 2000-2007. These were evening mass transmissions.

As you recall, my recent daytime band scan on DXLD was carried out on consumer radios, as in what would the average Joe be able to hear. I did parallel all stations against a more advanced communications receiver, and sure enough, it was BBC Radio Scotland on 810. Devon is a powerhouse on a DX set up, but was missing from the consumer band scan. It was also interesting that Bristol was all alone above 200 meters in this case. The 1503-1602 KHz is quite a jumble in the winter here.

I have never lived anywhere where there is such a difference between summer and winter day time DX on medium wave. As I mentioned, I consider 10AM-2 PM local to be my daytime widow regardless of local sunrise/sunset. The amount of low powered British (200 watts or less) and far way high powered medium wave stations I could hear in the day time winter period was astounding. The increase in daylight long wave reception is quite noticeable as well, but I will miss the Russian targets this year.

Thank you again for the knife edge explanation. Even at this distance it must be the cause.

Kind regards,
Brock

A few comments, the dance music station you get on 87.8 and the FM band church transmitters you received are pirates so unlisted.

(there are some licenced church transmitters on a band between 27.6 and 28 MHz HF, almost all, if not all, are NFM rather than AM, give it a try Sunday mornings)

regarding the good results from North Hessary Tor , I would be of the opinion the presence of a 2000+ feet high mountain in the distance in the signal path is helping the reception, so-called 'obstacle gain' or knife-edge diffraction. I think its the Galtee mountains in the path which you can surely see in the distance. A good signal hits the very top, only a small bit of that diffracting over can be enough for reception in a distant zone

line-of-sight with the mountain top perhaps around 20 miles the other side . The effect is more likely with mountains with sharp peaks rather than rounded tops, the mountain top having a clear view to receiver and transmitter (not seeing as far as Devon though, but a clear path out to sea in that direction)

33775. New relay introduced for two Dublin stations

Yahoo group: SkywavesDX (2014)
Date: 2014-07-30 15:50:08 UTC
From: kpc850@...
Topic: 33775 Message: 33775

A new relay site has been introduced for two Dublin, Ireland stations for the Balbriggan area of north County Dublin
both V polarisation and around 100W I understand.

98FM (main = 98.1) is relayed on 97.4 MHz
Whilst FM104 (main = 104.4) is on 103.1 MHz
(Other station(s) may be added in the future at this relay site)

one of the stations (98) mentions it on its website:
98FM Improved Coverage In Balbriggan
http://www.98fm.com/98FM-Improved-Coverage-In-Balbriggan

Hi Brock and a warm welcome to Skywaves DX! You are getting some excellent results with your homebrew aerial. Congratulations. I look forward to reading more of your logs. You should be in a good location for tropo DX from Spain and maybe Portugal too. There's also the possibility of trans-Atlantic multi-hop Sporadic E on FM there although this is obviously very rare!

We just need a big Es opening to test out the aerial now ;-)

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

Chris,
Thank you. Most of the Band III antennas here seem to be wideband. That is several directors with a wide variance in length. As I get to know those in the neighborhood, I should be able to ask permission to remove one. They are just hanging up there, and all present digital TV is using their UHF yagi, as well as a microwave antenna for additional channels or a small satellite dish. I can't imagine being stuck with just the Irish TV offerings. Have ladder will travel.

I'm sure this is full of un-told loss, but I have connected to coax lead from my yagi to the elements on an indoor amplified antenna. The Yagi is outside setting on top of a step ladder as I experiment with various directions. The Wenvoe programs are now full quieting with no tropo or e-skip noted at 1400 Z. While they are out of the yagis coverage, the ATIS airport XMTR's at Shannon and Cork are almost full quieting. I used alligator clips to find the "sweet spot" on the extended rods and clip the yagi leads there to find the most gain on 92.5 and 94.3 for Radio 4.

I use a Belkin auto FM transmitter to gauge signal strength as I rotate the yagi. I feed audio from the laptop to the XMTR on unused 105.9 and listen on a portable Sony as I make antenna adjustments.

I am by no means an expert, and do not have the equipment or expertise of many of you, but I am having fun.

I imagine it would be quite a challenge to hear U.K. DAB stations outside of a large tropo opening. It does not appear that much outside of RTE is in the Limerick foot print. I may give it a shot anyway.

Watching the maps and this list for possible openings. I check a couple of times a day anyway. 1800Z seems to be a hot hour for e-skip here.

Thanks again for your advice. Again, I'm not a die hard expert, but do get a thrill my girlfriend will never understand when signals roll in. Hi, hi.

Regards, and happy tuning!
Brock
County Limerick

Hi Brock,

Yes, the unused Band III antennas should be suitable for DAB DX, especially if they are not channelised (eg, they are wideband E5 - E13).
DAB multiplexes use the same channel numbers as were previously used on European Band III TV.
For DAB, each Band III channel is usually split into 4. Eg, channels 12A, 12B, 12C & 12D. This is the same as channel E12 was for TV, and so on.

In Ireland, the Band III channels were categorised as letters (D - J, I believe). The required antennas would, most probably have needed to be wideband, as both RTE services were often transmitted on Band III, requiring a separation of several channels. This would make the redundant Band III antennas most suitable for DAB reception.

73,

Chris 2E0NDT

33780. R Dacha 67.64

Yahoo group: SkywavesDX (2014)
Date: 2014-07-30 20:08:35 UTC
From: Julian Hardstone
Topic: 33780 Message: 33780

Listening through some recordings from 22 July last week I was expecting to hear announcements from R.Vitsebsk on 67.64 but although I cannot follow the East European languages it was not Vitebsk. Tim kindly listened and confirmed the ann was R Dacha

MP3 at http://ukradio.info/Skywaves/OIRT_July2014/140722_67-64_ann.mp3

Tim says he remembers reading about R Dacha OIRT in Reflexions a couple of years ago

Is the tx location known for this? Other OIRT tx heard at the time included Asipovicy, Babrujsk, Geranyony, Glubokoye, Hrodna, L'viv, Pinsk, Slonim, Smyatanichy, Svislach, Trostyanets'

- Julian, Stockport, Technics ST-500l (80kHz), 2-ele at 90?

Leigh,
Thank you for the website. I feel knife edge diffraction is coming into play for my reception of the South Eastern England and Wales. As I have mentioned, it is dependable day after day, although it will increase in signal strength during tropo lifts from the area. E-skip will override these BBC signals when it is in.

I can see the Galtee range outside my window, and they are in the direction of the BBC transmitters. This is the only direction were I can pick up signals as such a distance (240 miles) without any help from tropo. Attempts to hear signals at that distance from the North or Scotland on clear frequencies have been nil unless there is tropo along that direction.

So thanks to all of you for answering my mystery, I am still looking into a way to unlock the signal level threshold on my TV dongle, so weak signals or even frame bars would be possible during a channel R 1 e-skip opening.

You all have been more than welcoming, and I appreciate your advice. I'll keep watch on this fine group and the real time propagation maps for openings. Maybe I can beat the DXer's "Murphy's Law" (The best openings occur during working hours), and join you in some fine DX. If only F2 video would make it from Canada.

Cheers and happy tuning!

I have heard something like this when in north-west Wales. Snowdonia is to the west and blocks stations from north-west England. At one point, driving south on the A487, Manchester stations leap up out of nowhere and become audible for a mile or so, yet they are completely blocked by the 1000m range. I cannot remember if RDS came into play. It's a few years since I have driven that way.

I have heard there is a similar but less marked effect of French stations coming though somewhere in North Wales where the Cotswold hills play a part.

Thanks for the links,
I'm now certain i've never experiences true knife edge refraction

I have Axe Edge to the East of me but theres not really any suitable
targets for refraction to the east of it
(am searching through FM list for txs at approx 61 degrees from Congleton)

33799. Sporadic E Loggings for 31 July 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-07-31 20:44:39 UTC
From: Janpeter van Dijk
Topic: 168 Message: 33799

Hi All,

Crazy Sporadic E conditions this evening. Especially on Band II most of the time up to five (5) stations on each frequency, none of them strong and all of them very patchy.
Add to this a high amount of distortion. All of this made the RDS decoding virtually impossible. Oh well, at least there was an opening.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

How about I''m tuning into Es, I think I'm tuning into Es I really think so!

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

From: John Faulkner, Skegness
Topic: 33796 Message: 33802

Possibly not, but I think it's an internationally renowned song.

https://www.youtube.com/watch?v=gEmJ-VWPDM4

Slight frustration here at the moment as we have family AND friends
staying with us and there is barely any time for radio. I had to leave
tonight's opening not long after it had began. I'm afraid it's going to
be like this until the middle of next week. Can't have it all ways though.

Hope everybody had some decent DX tonight anyway.

John

33807. Radio Rossii on 67.07? - double hop and othe UNID's

Yahoo group: SkywavesDX (2014)
Date: 2014-08-01 14:37:32 UTC
From: davebunyan@...
Topic: 33807 Message: 33807

Grrr! missed half the OIRT opening as I was busy posting yesterdays's log.

However I had some good reception of R Rossii and some unidentified ones. In particular a weak signal on 67.07 - possibly two different stations. First part of recording you can hear the music, then just before 1:00 min time pips - male voice is also there. I could also see a signal on 67.10 and confirmed it was different to that on 67.07. Only BR Radio Stolitsa and Radio Rossii are listed on this freq. Can anyone hear if the male is speaking russian? https://app.box.com/s/0lhqvs98vhiq5aavyy6x
https://app.box.com/s/0lhqvs98vhiq5aavyy6x

Next up - can anyone confirm this is Russian? TVSound_20140801_124200Z_65758kHz_AF.mp3 - File Shared from Box https://app.box.com/s/ttorfiaawhs19ak3rk63 - should be RTR from the offfset and if so will confirm my reception of R Rossii on 67.25 as being the same site.

Then a very clear signal on 66.08 - french song followed by station id which sounds like Radio "Soltzin" - and nothing like "Radio Stolitsa" UNID_20140801_113559Z_66080kHz_AF.mp3 - File Shared from Box https://app.box.com/s/47qjwmabj4h9dvryygrh

And finally this one on 69.08 https://app.box.com/s/ryk547oc3wpek9e9zlox
https://app.box.com/s/ryk547oc3wpek9e9zlox

Thanks Victor,

Radio Mayak - the only transmitter listed on 67.07 is Ordynskoye which is 5149km and 600 watts! I can state I have a well calibrated RTL-SDR device - so tuning was centered on the signal peak and audio bandwidth was around 60 kHz to avoid interference from another signal on 67.10.

There is no Radio Mayak on 67.10 and Radio Mayak on 67.04 is listed as 4 watts and 5248km.

So before I get very excited and log it on FMList - are you 100% sure it is Radio Mayak - and/or is there another transmitter on the frequency which is a lot closer?

Prg, pips and talks - for sure Mayak at that time.

The closest surviving and confirmed Mayak is only on 67.13
67.13 RUS SM Radio Mayak Smogiri / RTPS

Further just speculation about.

Covered area today - BLR, western Russia

Topic: 33807 Message: 33811

That is interesting as I had Radio Mayak on 67.13 at 1208 UTC - a few minutes later. There is no confusion in frequency as the frequency and date/time stamp comes straight from HDSDR software and at the time the only activity between roughly 66.5 and 67.5 was on 67.04, 67.07 and 67.10 with 67.07 being weakest.

I have found - in FMList - but not on myFM - Radio Mayak from Borovichi on 67.07MHz - Distance 2235 km / Azi 57 deg which fits in with the general propagation. (Radio Rossii from the same location is on 69.02.).

So I think Borovischi is still active. I also went to re-check what was in myFM on 67.07 to get the bearing and the more distant stations have disappeared from the list! So I don't know what is going on.

Thanks for the help

David

** Personal Skegness 'First'

Today was a memorable day as I received something I have been after for
a while ... something from my list of 'wants' too, a good opening to
Iceland, virtually all the way to the top of the band!

You'd expect Iceland would be more commonly received in the UK via E
skip. The distance is ideal for a single hop. Maybe it's because we
don't tend to go looking in that direction too often. Early warnings are
perhaps less frequent for Iceland too - it's the same for the Azores and
Madeira.

From: nick gilly
Topic: 33796 Message: 33813

Yesterday evening was quite a decent opening. I decided to go 'old-skool' and use the Yamaha T-2 for this opening: analogue tuning and no RDS. Countries heard included Poland, Hungary, Romania, Bulgaria, Croatia and Italy (who were a pest at times). There were other unidentified Balkan signals received during this lift such as folk music on 91.5, a 'Rock FM'? on 87.8 and more folk on 88.9.

A few stations IDed, either from announcements or web parallels:

87.6 PR 2
87.6 Kossuth Radio
87.6 Radio Shumen
87.7 HRT HR1
88.3 HRT HR 1

89.8 Radio Romania Actualitati

plus lots of Italians.

All gone by about 8.20 pm.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

Slight frustration here at the moment as we have family AND friends staying with us and there is barely any time for radio. I had to leave tonight's opening not long after it had began. I'm afraid it's going to be like this until the middle of next week. Can't have it all ways though.

Hope everybody had some decent DX tonight anyway.

John

Hello,

I had this interesting signal on 94.2 MHz at 18.17- Italian local time on July, 20.
This should be RAI Radiouno, but could this be regional px from Lombardia at this yime - on Sunday ? Mentioning something in Bergamo... sorry, my Italian Language skills are , well, "mediocre".

I have also searched the web for e-mail address of Radio Classica Bresciana (89.2) - not found.
I will be Grateful for contact info. This is probably local station and not part of radio Classica network ?

happy for any comment !

73 !

Hi Arvid,

this is a sport talk about football; it sounds as an interview to the trainer (or a manager) of Siena FC, there is a mention to Bari team, too.
It could be RAI Radiouno from Monte Penice one of the more powerful tx in Italy.
No local programs over RAI on Sundays apart from "Special Regions" (Sardegna, Sicilia, Valle d'Aosta, Trentino-Alto Adige and mine Friuli-Venezia Giulia).

Hi Arvid,

did you attached an audio file of your reception on 94.2?
I want to check whether the signal you received comes from Radio Sportiva (who has several transmitters broadcasting on 94.2), but essentially I agree with Alessandro's opinion.

Concerning Radio Classica Bresciana, according some information I've found in the Internet, this radio is a sort of "second channel" of Radio Brescia Sette.
I've also found these e-mail: marketing@radiobresciasette.it or diretta@radiobresciasette.it

Regards,

Franco

I tried earlier today and all I got was weak Fr Culture on the vertical aerial. Just now - I'm getting Fr Inter from Reims (337km) at reasonable strength and Fr Culture on the vertical again.

Not only that but Heart is on 96.30 instead of 96.28 - maybe the two events were linked?

33828. Radio Kent 96.7 (or thereabouts!)

Yahoo group: SkywavesDX (2014)
Date: 2014-08-02 20:56:57 UTC
From: davebunyan@...
Topic: 33828 Message: 33828

Now Radio Kent on 96.7 has a rapid frequency jump. It shows clearly on the attached screen shot from the HDSDR. In case it is not self explanatory - top part is Radio Essex on 95.3 - completely steady. The bootom part is Radio Kent 96.70' ish - and you can see the frequency is jumping about. The 19kHz pilot tone zig-zags back and forth quite clearly.

33829. TV-DX equipment via PC

Yahoo group: SkywavesDX (2014)
Date: 2014-08-02 23:45:51 UTC
From: Marc Vissers
Topic: 33829 Message: 33829

What's the best and reasonably priced TV Tuner card suited for analog TV reception ? Preferrably with PAL/SECAM/NTSC-possibilities and audio/video standards.

73, Marc
Belgium

33830. Re: [SkywavesDX] Radio Kent 96.7 (or thereabouts!)

Yahoo group: SkywavesDX (2014)
Date: 2014-08-03 03:38:03 UTC
From: Tim Bucknall
Topic: 33828 Message: 33830

oooh!

very much appreciated Dave, with a distinctive signature like that i
might finally be able to detect it !- please god don't let them fix it
yet!

96.7 would be a nice catch up here

FYI Heart 100.7 is unstable, not as dramatic as that though!

It would be good if many transmitters had these little foibles/offsets, would make IDs so much easier. If there is a lift towards London, I can ID the Crystal Palace nationals without even listening to them!

33835. Faulty Log

Yahoo group: SkywavesDX (2014)
Date: 2014-08-03 10:38:25 UTC
From: Janpeter van Dijk
Topic: 33835 Message: 33835

Hi All,

I was just playing around with my Sony tuner controlled by the PC through the Olivier Guillaume software and decided to try our the logging function, while tuned to Radio West from Rotterdam.
Now I find this logging all of a sudden being registered in Olivier's logbook, through FMLIST and on the Sherlock maps. Oops.
I kew this was being prepared but I was unaware of this being functional yet. And obviously I am connected to the same web server as Olivier.

Sorry folks, it won't happen again. And there is no Es between Southern France and Rotterdam. Yet.

73, Janpeter

Thanks Andy for the Antenna 2 info

Jim, a lot of them do, i'll show you mine if you show me yours ;-)

City 96.7 has a wobble but its gentle compared to Radio kent and the
prog content means its unlikely anyone will confuse them

92.4 leeds was wobbling this week, can't check it now as its playing
brass band music- no its not a stereotype- thats the reality of life
in t' north!

93.4 chesterfield- at least i think its chesterfield and not bilsdale
has a really cool sig!
normally its a little unstable but then it has random bursts of insane instab!

well i picked t' wrong day to try for kent 96.7
Wrotham nationals are all poor

I'm going to Axe edge to try- i won't have an analyser in the car but
i will hear it beating on speech px

Hi Marc,

Sorry, I can't answer your question, as I don't have an analogue TV card.
I'm just answering your email to Skywaves, as I don't want you to feel
ignored by the group.
I hope someone with an analogue TV card will reply to your request, soon.

73,

Chris 2E0NDT

Hello Marc,

Try to find on the Internet/Ebay if you can get a LifeView 3000 PCI TV- Card.

More info how to setup this card for TV-DX look here.

Hi Nick,

Sony SB-920 uses BU1922
Sony SA3ES uses SAA6579T
Sony SA5ES - doesn't have RDS (at least I can't see anything on the circuit diagram).
Sony ST311 uses SAA6579T but follows this with an RDS Sync chip - does not display PI codes.

The BU1922 has pins that are 0.1 inches apart, the SAA6579T has pins 0.05 inches apart

You are going to have to get the soldering iron out - it's quite easy to pull off the clock and data lines and feed a signal out to a soundcard via a resistive network. I've got very cheap (£2) USB soundcards that work fine on just the data signal into the mono input - so I've more than one running on the PC at the same time.

It's a bit more work to add RDS to a non-RDS tuner - but my two Yamahas are modded with a small circuit board and perform well using the TDA7330 chip.

Problem is - anything 'modern' you can't easily get at.

Rgds

Sony 5ES, the flagship model of Sony tuners has ofcourse RDS capabilities
(PI and others as well). I have two of them, one modified, one original.

Old comparison made by Jouni Keskinen years ago.

http://people.uta.fi/~jk54415/dx/tuners.html

cheers, Hannu

Oh - silly me! The Service Manual I downloaded sometime back is the US/Aus/Chinese version and there is definitely no mention of RDS or any RDS chips visible. It doesn't show a circuit board layout which might have shown a missing chip.

Definitely something to watch out for if buying one on eBay

This might seem a little cheeky at this point, but I have two Sony SA3ES tuners here which are available for a small price. I don't want a lot for them because, although they are in decent working order (and have been modified with narrower filters) they both need new rotary encoders or whatever they are (tuning knob thingies) as they slip quite badly. This problem is easy to rectify though.

If anybody is interested please write to me directly.

Thanks

John

33852. RedSands Radio 87.9MHZ

Yahoo group: SkywavesDX (2014)
Date: 2014-08-04 16:47:52 UTC
From: davebunyan@...
Topic: 33852 Message: 33852

Did anyone manage to receive RedSands Radio at DX-distances? It was active all July wiping out Omroep Zeeland - but has now gone. Pi Code was C895. Probably running 25 watts. It operates in the run up to the Whitstable Oyster Festival which ended on 1st August.

RedSands Radio was received in Finland two years ago, 26.7.2012.

I presume this is the same station, location Whistable on 87.9 MHz.

All listed Ramadhan stations broadcasting on 87.8 was received in
Finland this summer: Stoke-on-Trent, Walsall and Edinburgh.
Unfortunately these are only RSL-stations on 87.8. That would be better
frq in Finland instead on 87.7 (YLE Eurajoki) and 87.9 (YLE Espoo).

Yes Dave the US version is quite different and Sony should really have given it a unique model no. to avoid confusion! From what I've read the US version is not as good as the Euro/UK one.

Thanks for the info about the RDS decoders. I didn't realise that the SB-920 used a different decoder to the SA3ES but it was released about 3 years afterwards so this is probably why. The performance of my old SA3ES seemed about as quick and sensitive as the SB920 (judging from watching videos on Youtube) so they must be pretty close. I presume that the SA5ES will use the same decoder as the SA3ES as they both first appeared in 1995.

Thanks also to Hannu for that round-up of tuners including the SA5ES. There's also a report on this tuner on that website in Finnish, and whoever wrote it was suitably impressed after reading a Google translated version.

Good DX.

Nick, Whitchurch, Hampshire.

33855. Remembrance 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-08-04 23:45:08 UTC
From: Julian Hardstone
Topic: 33855 Message: 33855

Today the UK broadcast media have devoted much of the day to the remembrance services for the centenary of the start of WWI.

I rather love it when we have such a focus for our thoughts. Earlier this week the broadcasters had spent much time on the Commonwealth sports in Glasgow, but today the atmosphere was very grave and reminded me of the day of the funeral of Princess Diana on 6 September 1997.

The wish has been to remember all the victims of this terrible war in Europe and the suffering of the fighters and the civilians. As someone said "The dead do not carry flags". All puiblic buildings turned the lights out for an hour or more this evening, and looking out of the window here I see that many householders have done the same.

We didn't hear how other nations have been remembering the centenary, but there must have been ceremonies throughout Europe, with churches and local and national government participating.

We continue to hope for a lasting peace throughout the world, and to pity all people caught up in war at this time.

- Julian

on this theme, was disappointed by Great War diaries, was it re-edited
for each country?

as part 1 of a series it would have been fine but as a standalone
broadcast it was a let down

The Galician segment (which i was really looking forward to as a
counterweight to the usual western front stuff) was only seconds long
and the actress mumbled so that i didn't understand a word

the other Austrian segment wasn't much longer than the above.

all in all a missed opportunity

Julian,

After reading your message last night I was so tempted to reply, but I did not feel I had anything valuable to contribute at the time.

I have never heard the phrase "The dead do not carry flags", but what a sobering thought. I will remember this. Edwin Starr was right, "War. Huh! What is it good for? Absolutely NOTHING!" So true.

I had no idea ANY of these WWI related remembrances were taking place. I must have literally had my head buried in the sand. BUT, I can blame the fact that we have had the grandchildren staying with us for almost two weeks, plus we had an unexpected visitor with his children, who all caused us a lot of problems and who isn't welcome here anymore. So it has been an upside-down period, which also spoilt our first wedding anniversary, and one which has seen the television airing nothing but children's TV cartoons. This and a relative lack of radio time means I have been cut off from the media.

What I only discovered this morning was how Skegness had its own remembrances yesterday. It seems that all the illuminations were switched off for an hour and the famous clock tower was stopped between 10pm last night and 10am this morning. One of the local councillors organised an impromptu ceremony at the last minute and I hear this was well attended.

Tim, that's a great shame there was some bias in the media, but I wouldn't expect anything different from them. Let's just hope all the publicity serves as a reminder of the evils of war. Nobody wants wars, though some of our our governments might try to tell us differently.

Peace and goodwill to all members; To all people; In all nations.

John

** Personal Skegness 'First'

The Es season really feels like it's winding down now. Signals on the above band 2 loggings were mostly well below RDS levels.

I had my first meteor scatter on the OIORT band. All previous attemps to hear MS on this band have failed whenver I have tired in the past. On this occasion I wasn't actually looking for it. I had been checking for Es and left the XDR on 72.32 for no reason, when a burst appeared which was clearly playing the same music as the Belarus' first programme web stream. There were no other contenders within range either so the Geranyony transmitter was the only option anyway.

Good DX!

67.19 is fixed now apparently, good to know

winding down? it never got wound up here, I'm nominating 2014 as worst season ever !

I think a lot of the audio problems must have been fixed. The next log (which I will have to check and post later) saw a very good Es opening on the OIRT band on the 1st. I don't recall any obvious technical problems (mind you, it was mostly Belarus), but I have heard several transmitters with very odd audio phasing problems this season.

The OIRT band has thrown up one or two surprises this season, but still no double hop. This is probably due to the relative lack of signal strength due to my 9.2 not tuning down that far.

I know - it really has been the worst Es season I can remember, but I have been lucky to be on the edge of more of the Es openings, being slightly closer to the action. It's still not a patch on last year's season, but I doubt if we'll ever match 2013.

The 'video recording/logging after the event' method has afforded me lot more loggings though, resulting in my second largest seasonal Es logbook ever. It's more quantity than quality though. Had this been a good season and I'd been adopting this video recording method, my logbooks probably wouldn't be finished until winter. I can't recommend this method enough though if you don't want to miss anything, but there are obvious drawbacks. I still need to go back and check through some older videos as there were several interesting stations I would like to track down.

One day.

John

33865. New plan for A5 and A6

Yahoo group: SkywavesDX (2014)
Date: 2014-08-05 21:03:06 UTC
From: Radio Stations
Topic: 33865 Message: 33865

The U.S. radio industry is not the only one exploring ways to help AM broadcasters. Brazil radio observers expect their government to publish a decree in November detailing an optional migration process for AM radio to the FM band. In cities where the FM spectrum can’t accommodate new channels, it will be necessary to extend the spectrum using television Channels5 and 6.

once one country extends down to 76mhz, almost certainly others will follow

what with the cheap availability of tecsun portables that tune down to
65mhz and China already using 87.0 and sometimes lower

this is perfect, even if Offcock goes ahead with its plan to allocate
88-94mhz to wireless internet
we'll have more exotic dx possibilities than ever before!

33868. Hackers design clandestine aerials to help North Koreans watch banned TV

Yahoo group: SkywavesDX (2014)
Date: 2014-08-06 11:16:15 UTC
From: Brock Whaley
Topic: 33868 Message: 33868

Hackers design
clandestine aerials to help North Koreans watch banned TV
http://www.theguardian.com/world/2014/aug/06/north-korea-clandestine-tv-aerials-banned-programmes
Is North Korea using a digital platform compatible with
South Korean digital standards? How else would this work? Do these proposed
antennas and receivers provide a signal that a North Korean set would
demodulate? How many sets in the North have USB or HDMI ports I wonder?
As we know, over the air analog was different with South
Korea using 6 MHz NTSC channels and the North using 8 MHz wide SECAM. And we
have all heard that North Korea “seals” the VHF tuners to the channels used in
each region. (Brock Whaley, Ireland)

33870. Sheppey FM on 87.7 MHz throughout August

Yahoo group: SkywavesDX (2014)
Date: 2014-08-06 13:28:44 UTC
From: davebunyan@...
Topic: 33870 Message: 33870

Just started up http://sheppeyfm.org.uk/ http://sheppeyfm.org.uk/ community radio station. It is located in Sheerness and is probably very low powered as it's noisy mono on the 5ele turned to the north. I've e-mailed for details.

Maybe a SpE opening will enable it to be received a considerable distance away.

94.6 0946 D MDR 1 Radio Sachsen-Anhalt, Brocken (san) German OM, as web. Noise free scatter 712km
98.0 0946 D NDR 1 Niedersachsen, Torfhaus (Harz-West) (nds) Roy Orbsion song and ID. Noise free scatter 707km

Quite an interesting morning on the scatter side, with the best signals I have heard from the more distant transmitters such as Inselberg and Hoher Meissner. A few new frequencies were heard too. All the above would probably have come in via aircraft scatter. Most peaked at noise free levels, though were all obviously on the weak side. I am making recordings here and there and will upload a compilation soon.

On the tropo front, well, there is no tropo. Conditions have been as flat as something very flat for the last few days.

It's probably time to start to look at DXing via the Perseids now. This shower should peak on the 11th, 12th and 13th of August.

Good DX!

The strongest Dutch tropo received here to date. Lots of locals. 49dBf
the strongest signal. BBC Radio Lincolnshire, Lincs FM and Tacolneston
have all been toppled with little manoeuvring of the antenna.

Good DX!

33880. DX from a Devon Beach

Yahoo group: SkywavesDX (2014)
Date: 2014-08-07 21:36:18 UTC
From: sniffingmoose@...
Topic: 33880 Message: 33880

Hello

Just sitting on the beach today at Budleigh Salterton on the Devon south coast Using my Pure Pocket DAB/FM radio I heard:-

89.9 France Musique from Rennes 175 miles
93.5 France Inter from Rennes
95.6 France Inter from Caen 166 miles. Good Stereo and RDS

Also 94.8 BBC Radio 4 from Les Platons Channel Islands.

I think there must have been some enhancement.

If its that good on the beach, hopefully I will try a coast path walk and see what its like from the cliffs.

Chris Thomas

33883. East Anglian pirate on 89.4 ??

Yahoo group: SkywavesDX (2014)
Date: 2014-08-07 22:48:39 UTC
From: John Faulkner, Skegness
Topic: 33883 Message: 33883

I have been receiving a pirate station on 89.4 for most of the evening. It's playing some kind of drum and bass variant. The direction is approximately Norfolk/Suffolk. Perhaps Ipswich? I know there used to be pirate radio activity in the Ipswich area so I am wondering if it could be that. Not aware of any in Norwich though.

Thanks

John

John, it is a Norwich pirate called Style Radio UK. See this post here:

http://forums.digitalspy.co.uk/showpost.php?p=74029676&postcount=2764

There's also a live stream here: http://curiosity.shoutca.st:9098/stream

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

On Thursday, 7 August 2014, 23:48, "'John Faulkner, Skegness' john.faulkner@... [SkywavesDX]" <SkywavesDX@yahoogroups.co.uk> wrote:

Thank you Nick.

I suspect this is the one. Unfortunately, it has faded this morning, leaving a very weak France Musique from Boulogne. I thought I might have been able to receive a Norwich pirate all the time from here, unless it is off air the air at the moment, but conditions are nowhere near as good as they were last night. Actually, having just written that I do hear /something/, but it's too weak to be sure.

Cheers

John

** Personal Skegness 'First' via the respective mode

* This tropo was sudden and unexpected.
* It was the strongest Dutch tropo I have known since moving here four

years ago.
* It wasn't forecast!

Had it not been for the Skywaves alert from Matt in Grimsby I might never have known this was happening, so a BIG thank you Matt.

Videos:
Tropospheric. 07-08-14 1955 (Dutch Tropo): https://vimeo.com/102909303
Tropospheric. 07-08-14 2201 (Dutch Tropo): https://vimeo.com/102909302

These are selected clips of the above tropo. I didn't record all of it as I don't have the time to go through hours of editing, so I kept pausing until necessary. I haven't checked through these recordings so I wouldn't be surprised if I was recording when I thought I was paused, and vice versa, as I was concentrating on the DX more than I was on the recording itself.

Good DX!

We went there last month and Brest and Les Platons were at easy RDS levels on the car radio where there was a clear view of the sea. It would certainly be good spot for coastal DX.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

This has just arrived in my inbox.

Is it a date error or an old email which has finally been released from captivity?

... and rather curiously, it's the same start date as that of the first Es last year! Let's hope that's a good omen.

DX Robot appears to be working too. It hadn't been activated on my mobile when I first started listening, but I switched on the wifi on the mobile and it sprung to life.

Good DX!

John

Hi,I've received yesterday in Saltdean a station on 87.7 like Radio Carls is right the name of this station?there are the news via Sky News andh with commentary of races and advertisting of Aberdeen
please help for ID this station
strange that in this 3 days 5-6-7 of August no Es in Saltdean,only 2 stations from Morocco-89.2 MFM Oriental and 91.2 Radio Mars from Casablanca
The Es is low in these month?

33905. Szent István Rádió 89.7 - where is this from?

Yahoo group: SkywavesDX (2014)
Date: 2014-08-08 19:52:12 UTC
From: nick gilly
Topic: 33905 Message: 33905

I received a station in this evening's SpE opening in Hungarian with religious talk and music on 89.7. There was a mention of Szent István early on and I only thought to check the Szent István Rádió stream just as it was fading out. It appeared to be a match. However, there are no stations listed on 89.7 in Hungary on FMLIST, and this frequency isn't listed on Szent István Rádió's website. Does anyone know where this transmitter is from?

Thanks and good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

Hello Nick,

I don't know any station on 89.7 MHz in Hungary, but I have an idea. The Szent István Rádió is a catholic radio, like the Mária Rádió as well. Is it possible, you listened Mária Rádió? - if it is, I think, you received Mária Rádió Erdély from Transilvania. There is a high power transmitter on 89.7 MHz.
http://www.mariaradio.ro/foldi-sugarzas

regards,
Jozsi from Hungary

ps: this evening I received some stations from UK and Ireland on band 2 and STL's on 48.425MHz.

Hi,

I think I also received this one on 89.7. It had prayers (female voice) and 'laudetur Jesus Christus'.
Very weak recordings can be found here: https://app.box.com/s/5johd0ez0l57qd232xsz and here https://app.box.com/s/98jcnh80vv53rvj0gmii

33911. FM DX Loggings for 8 August 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-08-08 21:13:47 UTC
From: Janpeter van Dijk
Topic: 168 Message: 33911

Hi All,

Two long lasting sporadic E openings today. The MUF struggled to reach Band II though. And when it did, the propagation went immediately very wild and unstable, like it has been the case throughout the season.
Add to all of this some tropo scatter enhancement in the morning hours and this made up for a busy day.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

33912. Re: [SkywavesDX] OT : Best vacumn cleaner to buy ?!

Yahoo group: SkywavesDX (2014)
Date: 2014-08-08 21:35:38 UTC
From: Dennis Smith
Topic: 33889 Message: 33912

Roomba's are great, unless your pets like to leave messy messages for you in the kitchen. Then you might have issues. I use one and get the corners with a Henry vacuum cleaner from Numatic. The Henry is about the best you can get for under £100 (if you look around and wait for the seasonal offers, else you might see them for anything up to £140). these things suck up anything, never break and are so good they are used in industrial cleaning as well as domestic. Don't bother with a Dyson. They might be ok for a short while, but they don't really have half the suck as a Henry or even some of the cheap throwaway models you see in generic branding. I was asked to repair too some time ago - the on+off switch melted and a replacement was 2/3rds the price of another machine. I couldn't understand how power switch could melt so easily and be so damn hard to replace and be so expensive to replace - so glad it wasn't mine! We have a 20+ year old Henry at work, it's been dropped down the stairs, used to suck printer toner up when a full cartridge was dropped on floor throwing contents everywhere, and used on soggy ceiling tiles when the room leaked and flooded the building - and it still runs as good as my machine at home!

Needless to say the Henry was a worthwhile investment and I'd never go back to any other brand if I ever need to replace my current one.

Both of them realey Radio Vatican hungarian languages service. On
Herman's first record is jingle of Radio Vatican.

Ok thanks for a sensible reply ! I know how good a Henry yes, just about indestructible but I prefer something rather more domestic. It seems the Miele S2111 is a contender from Argos, displays PI codes also ;-)

It's a jungle out there just to buy a flipping cleaner !

Hello Jozsi,

So it can only have been Mária Rádió Erdély?
Thanks for ,your help.

73

Herman

** Personal Skegness 'First' via the respective mode

A surprise today with several Es openings, bringing in some persistent and more distant OIRT transmitters from Ukraine.

The action swung to the south briefly in the early evening with Spain and Portugal popping in and out with weak and choppy signals. Only one Spanish station produced RDS, then the band abruptly swung eastward, bringing Poland, Hungary, Romania and Bulgaria! Just when you thought the Es season was over!

theres nothing listed in the RSL list sorry

if you've been following the skywaves list you'll know this is the
worst E season in many years!

Hello Herman,

Most likely to be, but I had received on this frequency an other hungarian languages station, it is from Vojvodina. The serbian Radio Marija (http://www.radiomarija.rs/language/3/) network daily transmit on hungarian languages, this program name is "Mária Rádió Délvidék" https://hu-hu.facebook.com/Maria.Radio.Delvidek If you receive a hungarian languages station, it is not sure, that the station transmits from Hungary.

73 and Good DX

Jozsi

From: Tim Bucknall
Topic: 33920 Message: 33920

...so the intermod is back on 87.5 and stronger than ever

this is not a complaint btw, i find it fascinating

i thought the components were 89.3 (holme moss) +91.1(Llangollen)
but now i also hear Radio 4 but at a lower level than R2/3

help! how would a 3 way mix work!
time to give my calculator a work out!

i checked 92.9 too but Pontop Pike is way too strong

when tuned to 87.5 the dominant audio component varies depending
which filter i use- a narrow filter makes radio 3's audio dominant a
wide one- radio 2!

I think i may have come across this phenomenon in Bryncrug wales in
2009 when Radio 2 was heard on 94.4 but i don't know the local
landscape well enough to identify the "rusty bolt" radiating the
signal

Was there any qsb on the signal? I sometimes hear that, very weak, but it is usually Sky Sport. No qsb so I presume it comes from the next street to me!

its pointing exactly at me if that helps

I would be amazed and flabbergasted if Tac produced enough signal,
do you think its possible?

the signal is dropped dramatically now the rain has stopped but its
still there and i expect to hear at least a low level signal until the
dish is pointed away from me

As I said before "The Lovell telescope is an impressive
structure with a capture area of 4500m? at an average height of 55m so if it
were beaming close to the horizon in the direction of (Tacolneston) it is
quite realistic to suppose that intermodulation could occur at
a corrosion point in the metalwork close to the focus"
- but the beamwidth will be very narrow so I guess it would need to be within a
degree or so.
The beam will of course move round during an observation period as the earth
rotates.
- Julian

Attachments: 3 described; binary payloads are missing from this source WARC

Hi guys,
well as i suspected when i lost the signal at home the dish had been moved and was pointing straight up

I searched MW/SW & FM but couldn't find any intermodulation products

however i noticed fantastic induction effects on HF from such a large lump of metal, and the background noise was low ("radio quiet zone") the utilities on 120meters were audible on the tecsun mid afternoon which isn't bad for august

I'm going to go back in autumn when the F2 is back as presumably this induction effect
continues above 30mhz and the background noise levels in the radio quiet zone are nicer than at home, better even than some local hilltops

highest freq noted was REE 21.610 and some local cb on 27mhz but condx were awful

the possibility of Tacolneston being the offending signal up here in Cheshire is still mind blowing but i can't come up with a mathematical alternative to create 87.5

Tacolneston was almost dx when i was a newbie dxer! - i mean its hardly local whichever way you look at it

Tac is stronger round here than i thought, even got RDS on 101.5/89.7 on the way to jodrell- but its not constant at ground level

consider my mind blown- Jodrell bank is receiving Tacolneston Norfolk (238+ km!) and rebroadcasting a mixing product of it to my house!

a mixing product from a signal i can't even receive properly! (91.9 & 94.1 are blocked by Saddleworth)

reminds me of the luxembourg effect when I heard the audio of BBC 1296 superimposed on German MW stns even though 1296 was blocked by radio XL

some e skip about - football match 87.5 too brief to id, then a bit of radio capital

some good scandinavian pop bursts over 101.5 tac

Thank you Tim.

Kaliningrad is one of those countries which is not so easy to receive by any other mode from here. 66.02 should be well within MS range for just about all of the UK. It's 1327 km from here. Just have the stream running at the same time for the comparison. Also check the UR-1 and Radio Mahilow streams so you can eliminate those. My main concern was UR-1 as I wondered if I had heard this, but they had some light music at the time. Radio Mahilow is a pop station of course.

Cheers

John

Headline in Daily Mail "....A Supermoon lights the sky as it reached the point in its orbit closest to the Earth AT THE SAME TIME as meteors fall from the sky like 'fireballs' during the Perseid shower" {Updated 11 Aug 2014 05:53].

So far FMList logs show very low numbers 28 logged yesterday by all contributors and I only got a small handful. Last year the peak was 12th and 13th - so 'usual' media sensationalism. Peak this year according tot he Virgo applet is just after midnight on 13th - so tomorrow night and into the early hours.

It's just the usual media hype we get in this country.

In case you didn't know, the end of the world was forecast yesterday. It must have been true because I read it in the daily express. Devastating coastal floods were forecast. Even the weather forecasts couldn't agree. The stupid and completely useless beyond belief met orifice hyped up this BIG BERTHA hurricane and then played it down just before the event saying it would only be like your average autumnal low pressure system. They can't forecast a damn thing with their millions of £££££s supercomputers. The weather here NEVER fits in with the daily forecasts lately.

Rule number 1. NEVER believe a thing you read in our newspapers or hear in our news bulletins. They are about as trustworthy as our evil governments.

Hi John,

My point exactly - had the strange situation where we had weather warnings on the Met Office web site but also winds only gusting to 30 mph were forecast - so I left the 5 ele yagi in place. Mind you it really tipped it down - and the service road at the back of the house was flooded where the drains blocked.

In the meantime - SpE compared to lat year is rubbish, Tropo events have been far fewer - although 'local' coastal tropo has been very common.

For me the best part of this year has been discovering I could use the ST-311's as auto scanners. It takes a bit of effort to un-ravel what frequencies the stations on the RDSSpyLog were on - and quite a lot can't be pinned down. But it surprising how many additional stations I can log especially clusters of transmitters from one site that only appear for a very few minutes. It also means I can pick up openings when I not at the radio far more effectively than being tuned to just one frequency.

The winds are stronger and more gusty here today. So it looks like the orifice are a day late regarding those strong winds. We did have a squall line go through early yesterday afternoon. I don't know if this is the line which produced the tornado in Hull, but I uploaded a video of this to my Facebook page. I have seen worse though.

The ESTOFEX forecast were spot on with their forecast. How is it the orifice just can't get this right when other people can? ESTOFEX are surprisingly accurate and since the UK became a contributing member to this, we actually get included in their forecasts. http://www.estofex.org
>
> In the meantime - SpE compared to lat year is rubbish, Tropo events

As I have said before. I have been lucky here as I my location is a little closer to the action and so I have missed fewer Es events than most in the UK, but even with these I can say that it's been the worst Es season I have known.

John

Band 2 Scatter:
94.6 0804 BEL Radio Maria, Brussel/Albertplein Toren=Bruxelles/Place Albert (Tour) (bru) Unexpected fade-in for ten seconds or so, mixing Brocken. 9.2 in H. Echoey OM, as web. 9.2 lowered at the moment due to high winds 378km
102.6 0815 D NDR 2, Stadthagen/B?ckeberge (nds) Jingle ID and OM after pops 606km

Band 2 Meteor Scatter:
90.8 0003 D DasDing (SWR), Stuttgart/Hoher Bopser (bw?) Avicii song, as web 789km **
90.8 0004 D Deutschlandradio Kultur, Cottbus Calau (brb) OM news, as web. (Not // other Germans). Long burst 935km **
90.8 0016 ROU SRR Radio Iasi, C?mpulung Moldovenesc/Rarau (SV) Michael Buble song, as web 1890km **
90.8 0021 D SWR1 Rheinland-Pfalz, Bornberg (rlp) Pops, as web 640km **
94.6 0805 POL RMF FM, Poznan/Srem (WP) ID and Pink song. Live listening 1127km
97.8 0816 D NDR 2, Lingen-Damaschke (nds) Sudden burst while listening to live scatter 477km **

** Personal Skegness 'First' via the respective mode

Scatter really struggling this morning due to the current spell of unsettled weather and my 9.2 has been lowered because of high winds.

There has only been a minor appearance of the Perseids though. 90.8 was chosen for my overnight recording where Bornberg was the most persistent burster by some margin. Cottbus was also quite frequent.

Good DX!

From: John Faulkner, Skegness
Topic: 33943 Message: 33943

Can anybody help? I heard a BBC station on 88.9 this morning via meteor scatter. Heard twice in fact. Firstly at 02:38 with an English YL, sounding very much like Moira Stewart, with news about the death of Robin Williams.

I heard this again at 02:50 with a mention of "BBC" by an OM.

I can rule out BBC Radio 2 as I checked their overnight podcasted shows and it certainly wasn't them.

Maybe it's an unlisted BBC World Service relay or another station which carries them overnight.

Thanks

John

do you want to have a heart attack now, or will you sit down first?

i just need to look at the tropo maps to see if there was any "assistance"

an excellent point Joszi

just to refresh everybodys memory:
Hungarian language broadcasts may also come from the following places:

Romania (Transylvania)
Slovakia
Slovenia
Serbia (Vojvodinia)
Ukraine (Zakarpattia/Ruthenia)

Knowledge is power!

Thank you Tim, Chris and Peter. I recorded Radio Apollo and I can say it wasn't them. Peter confirms what FM List says - Apollo used to be be/take BBC World Service.

Since I recorded the streams for all the Germans on 88.9 I can rule them out. There are no Thuringen or Berlin stations on 88.9.

Still a mystery.

Thanks anyway.

Hmmm. I wish I could go there Tim but I cannot even begin to comprehend that such a catch would be at all possible. Nice thought though. Since I was beaming east overnight the direction at least is wrong for this.

Nobody knows for sure exactly what happened with Mark's catch, did they? was it ever confirmed?

My guess is that some Balkan country or similar might have an overnight BBC WS relay.

Thanks

John

That's excellent! I can't remember the detail. I remember there was some thought it might have been Iceland and that's about as much as my memory will allow me to remember.

You do wonder though with meteors burning up so high in the atmosphere just what an antenna might be able to /*see*/ at that those kinds of heights. Even in amateur circles though the most distant single meteor hop would be not a lot more than 2000 km. You can see this in the search facility on DX Maps.

Right now Mali would look like the only option, but I just cannot buy that.

I'll grab the recordings quickly before I delete the files.

John

My mistake!

In view of the amount of streams which switch off overnight I decided to split my overnight recording into two today and I forgot to amend the start time on my time calculator, so I was referencing the time on the first recording rather than on the second one. So I can now fully match up both my clips. Here are the clips if anybody is interested. https://app.box.com/s/5sjndxozeewd4hi0n1nr This is probably going to be the Oban transmitter.

Oh well. Red face again.

Thank all for your help.

Band 2 Meteor Scatter:
88.9 0009 LUX RTL Radio L?tzebuerg, Dudelange/Ginsterberg (gld) Pops, as web 573km **
88.9 0014 SRB Radio Beograd 1, Subotica/Crveno Selo (Voj) Local music, as web 1591km **
88.9 0034 S SR P1, Sk?vde/Billingen TM (vg) Running water. Very likely this site. Frequent bursts. 1023km **
88.9 0039 D Bayern 1, Dillberg (bay) Fairground Attraction, as web 878km ** **
88.9 0700 G BBC Radio 2, Oban/Pulpit Hill (SC-AGB) Moira Stewart with the news. Oban most likely 519km **
98.6 1617 SVK Jemn? Mel?die, Kosice/Dubn?k (KE) 5354 JEMNE___ with radiotext AFs 1544km
87.6 1717 HNG MR 1 Kossuth R?di?, Gy?r / Szabadhegy (Gyo) B203. 36dB 1368km
87.5 1719 POL PR 1, Czestochowa/Wreczyca (SL) 3211 JEDYNKA_ 1291km **
88.8 1928 CZE CRo Sever, ?st? nad Labem/Bukov? hora (US) Garfunkel - Mrs Robinson song, as web 991km **
93.1 1944 G BBC Radio Scotland, Meldrum (SC-ABS) YL talking about the Edinburgh Festival, suddenly over Belmont 501km **
102.2 2003 POL PR Radio Lublin, Lublin/Piaski (LB) 3900. News 1548km **

** Personal Skegness 'First' via the respective mode

The Perseids seem to be livening up with lots of longer bursts overnight. Focussing on 88.9, Radio Belgrade 1 from Subotica was the most consistent visitor, appearing almost every minute at times. Bayern 1, Dillberg was also regularly heard. Even RTL Letzebuerg appeared frequently via meteor scatter.

There were many other stations received which I couldn't identify. It's not easy to record all the appropriate web streams, but with 30 streams recorded (just about the maximum number of streams I dare before things get too complicated) it was easy to know which station was which due to the regular activity and web stream checks. As always, I recorded all German streams so as to keep a check on shared overnight programming, and tonight I didn't have one single dropout, very different to yesterday when streams dropped out repetitively. The streams to Switzerland kept failing at the same time, for instance.

In addition to the above log I am sure I heard Radio Maria from Italy on numerous occasions. It's impossible to know which site was coming in of course. I assume Poland's PR1 was one of the regulars but I am usually unable to record Polish streams due to them using the asx format - StreamWriter doesn't like this format.

Come the afternoon, meteor scatter was not only frequent but was also becoming much stronger. This gave me the incentive to attempt to null down local Belmont frequencies as much as I could by tilting the 9.2 into various slanted angles. This only reduced the signals down to a fluctuating 10dBf and 25dBf (XDR-GTK scale), but this was weak enough to allow some of the big Perseid bursts to topple Belmont. Here's an example, demonstrating Lincs FM 102.2 being toppled by Radio Lublin: https://app.box.com/s/zwh0mqdngdplvmygmj28 Lublin was identified by its PI code in this case.

I am still aiming to positively identify meteor activity on all band 2 frequencies. The current total stands at 127 out of a possible 206 frequencies. Whether I will achieve this goal remains to be seen. There is certainly some way to go.

Good DX!

John Faulkner, Skegness, Lincolnshire (JO03dd) <3m ASL.

From: Tim Bucknall
Topic: 33963 Message: 33963

Dear all,
I heard the 87.5 mixing product fade in this morning as Jodrell moved into Tacolneston-relaying position

yet again its raining so i can not state whether the rain must be present for the "rusty bolt" effect

87.5 is weaker than the last time

there is no enhancement to tacolneston on 101.5
so it seems that i'm not directly in line but that the " rusty bolt effect" is quite wide beam

if the normal pattern is followed i will have 3 hours to do any measurements/tests before the dish is moved

I'm pointing at Jodrell,

does anyone have the link that shows where jodrell is pointing?
would be nice to tie this peak to dish movement

From: John Faulkner, Skegness
Topic: 33962 Message: 33967

Thanks Tim.

I have just had Linz over Belmont. This was Life Radio over Classic FM on 100.5. "Linz over Lincs" would have had a better ring to it.

I can't get a null on Belmont 93.1 today due to incessant aircraft scatter. Possibly the wrong time of the day to be trying as Skegness Airfield is inline with Belmont and that is probably what's causing the fluctuations. Lucky to have got 100.5 but that was nulled to 20dBf. 93.1 is 28-30dBf. Perhaps I should beam north again.

I think it's time to bring out the HS Publications phaser. That should get rid of all Belmonts perfectly.

Good luck with your new DX investment project. You won't be charged extortionate interest rates with this bank!

freqs chosen for local useability, 87.8 has RTE but it does fade

148 degrees is the magic number, i'm sticking to the 800km TS limit
for the moment

Perhaps JF can comment on how well these French stations get out-since
i've never even heard of sensations and tropiques fm!

87.8 France Inter, Paris 10kw 145 deg 574km V Pol
88.2 BBC R2, Bexhill 0.1kw 143 deg 318km V Pol
88.8 BBC R2, Crystal Palace 4kw 142 deg 243km v pol (audible anyway at
low levels)
89.0 RFI Paris, 10kw 145 deg 574km V Pol
89.2 Sensations, Etampes 1kw 148deg 609km v pol
89.5 BBC R2, Oxford -154deg audible anyway
89.6 BBC R2, Hastings 0.5kw 142 deg 320km
89.6 Skyrock Le Havre 157 deg- too far off beam?
89.7 France Musique Chartres 32kw- finally a big tx! 155 deg 578km
90.2 France Musique- Neufchatel 5kw 145deg
90.3 BBC R3, Guildford/Hoggs Back 3kw 152 deg
90.4 Nostalgie, Paris see 89
91.0 BBC R3, Crystal P. see 88.8
91.2 Contact, Abbeville, 140 deg 1kw
91.4 Rire et Chansons, Neufchatel
91.6 Radio Picardie Littoral, Cayeux-sur-Mer 141 deg 1kw
91.7 BBC R 3, Oxford
91.8 BBC R3, Hastings
91.8 France Musique Bourges- finally a decent target!
92.5 BBC Radio 4, Guildford
92.6 Tropiques FM, Paris 4kw
93.1 France Inter, Abbeville
93.2 BBC R4, Xtal P.
93.2 Europe 1, Evreux 142 deg 1kw
93.4 Sensations, Bernay 155deg
93.6 RFM Evreaux - should be a perfect candidate, freq is clear
93.8 France Musique Sens 142deg 10kw
93.9 BBC R4, Oxford
94.0 France Culture, Rouen 151 deg 100kw
94.7 BBC 3CR, Quainton Hill
94.7 Nostalgie, Le Havre
94.8 BBC C&W, Meriden
94.8 Radio Shalom, Paris
94.9 BBC London
94.9 France Inter, Bourges

From my own perspective, yes, but reception is different down the
western side of England.

I have included some comments. Hope they are useful. Where I haven't
commented it means either they should be easy or, in the case of the
French transmitters, have never been heard here.

33971. Belmont Maintenance?

Yahoo group: SkywavesDX (2014)
Date: 2014-08-14 09:14:52 UTC
From: John Faulkner, Skegness
Topic: 33971 Message: 33971

Does anybody know if Belmont is scheduled for engineering works today?

I just noticed 100.5 off air, allowing me to hear Classic FM from Meldrum. No other Belmont frequencies were off at the time. The curious thing was, when the signal came back, it came back in stages, as if power was being increased in steps.

Thanks

John

33972. Re: Weak picture on E2

Yahoo group: SkywavesDX (2014)
Date: 2014-08-14 10:22:19 UTC
From: tony1844@...
Topic: 33092 Message: 33972

Hi Chris,
If you delve into the archives of the DX-Spots/DX-Maps you'll find that T6DD Afghanistan was worked on 6m in Europe on 4, 6 and 8 July.
On 6 July from 0856 to 1019 UTC he was worked by SM2, SM5 and SM7.
I'm not sure if your reception is in this timeslot, but if so, then it's possible you had Afghan TV, at 4300 km.

Here in VK6, Peter (VK6KXW) and I have detected a stable unid E2 carrier around 48.250002, late afternoon, which we guess may be from T6.

regards,

Tony

33974. Sittingbourne Perseids Reception Log Aug 11th - 13th 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-08-14 14:37:53 UTC
From: davebunyan@...
Topic: 33974 Message: 33974

After lots of tedious manual entries from the RDS Spy logs I've assembled the logs for the Perseids.

I admit to almost solely relying on captured RDS data via RDSSpy - as I've accumulated five analogue tuners all interfaced to RDSSpy I can leave them tuned to various frequencies. One of the ST-311's was left scanning 87.6, 87.7, 87.8, 87.9 and 90.9 continuously over the period. With few exceptions (notably PI:3233 and PI:D3C3) there are no duplicate higher power stations between these frequencies. During the daytime the other ST311 was left to scan the my usual range of frequencies at the low end - in the (folorn) hope of some SpE and captured quite a few M-S bursts but few could be tied to a specific frequency - so there are a lot more RDSSpy log entries than I've been able to log on FMList.

For me the peak reception was definitely on the 12th August.

I just hope the log formats correctly when posted

Rgds

33976. Bandscans

Yahoo group: SkywavesDX (2014)
Date: 2014-08-14 21:03:54 UTC
From: Janpeter van Dijk
Topic: 33976 Message: 33976

Hi All,

I have some general question regarding bandscans. I am in the process of compiling one for my home location and while doing so, I was wondering what should be included in the scan. Should this be limited to only those stations that can be received every day? Or should stations receivable with troposcatter be included? Or simply everything that has been received by any means of tropospheric propagation? Or even everything ever received, no matter what the propagation mode.
Except for the first option, should a remark be made how the tx is being received, i.e. the propagation mode, or received during an outage of local tx XYZ?

Maybe there are no rules set and everybody is applying its own rules. If that is the case, we may want to define some rules to go by.

73, Janpeter van Dijk

33977. Re: [SkywavesDX] Bandscans

Yahoo group: SkywavesDX (2014)

From: John Faulkner, Skegness
Topic: 33976 Message: 33977

I have wondered this one myself. My own bandscan on FM List includes stations which are unaffected by any form of scatter, in other words, are constant and never fade (at least, not in any obvious way). It's a local scan of stations which are heard no matter what the conditions. Beyond that, a bandscan could include scatter, but then there is 'regular' scatter and beyond that there may be scatter which is received occasionally, i.e. not every day, but which can also be described as regular. Summertime scatter is generally stronger and more reliable.

In short, I've probably complicated the issue, but I do not believe there is a simple answer to this. A flat bandscan of regular and constant signals here includes about 50 stations. A very good day of scatter might include 300-400 continental stations, but that would be an exceptional day with a lot of patient listening, including some VERY weak signals.

33978. Re: [SkywavesDX] Sittingbourne Perseids Reception Log Aug 11th - 13th 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-08-14 21:23:44 UTC
From: John Faulkner, Skegness
Topic: 33974 Message: 33978

A fantastic log David! Congrats on the lower powered stuff too. The 12th definitely seemed to be the peak. Mornings were disappointing but the mains activity came late afternoon/early evening.

All formatted neatly here in Thunderbird.

From: Janpeter van Dijk
Topic: 33976 Message: 33979

Some good points John. Matching exactly with my thoughts on the subject. Taking this one step further, I was thinking that FMLIST is the perfect database for every DX individual to keep track of what he/she has been receiving over the years. To make that happen without any doublings, you don't need stations to be listed in your personal band scan, that you have already included through your DX loggings. And vice versa, you don't want to include any station as a DX logging that you can receive every day.

So following this approach, a band scan should basically include everything that you would not include in any DX loggings list.
But I am open to any other suggestions of course.

Janpeter

Onderwerp: Re: [SkywavesDX] Bandscans

I have wondered this one myself. My own bandscan on FM List includes stations which are unaffected by any form of scatter, in other words, are constant and never fade (at least, not in any obvious way). It's a local scan of stations which are heard no matter what the conditions. Beyond that, a bandscan could include scatter, but then there is 'regular' scatter and beyond that there may be scatter which is received occasionally, i.e. not every day, but which can also be described as regular. Summertime scatter is generally stronger and more reliable.

In short, I've probably complicated the issue, but I do not believe there is a simple answer to this. A flat bandscan of regular and constant signals here includes about 50 stations. A very good day of scatter might include 300-400 continental stations, but that would be an exceptional day with a lot of patient listening, including some VERY weak signals.

John

Hi All,

I have some general question regarding bandscans. I am in the process of compiling one for my home location and while doing so, I was wondering what should be included in the scan. Should this be limited to only those stations that can be received every day? Or should stations receivable with troposcatter be included? Or simply everything that has been received by any means of tropospheric propagation? Or even everything ever received, no matter what the propagation mode.
Except for the first option, should a remark be made how the tx is being received, i.e. the

propagation mode, or received during an outage of local tx XYZ?

Maybe there are no rules set and everybody is applying its own rules. If that is the case, we may want to define some rules to go by.

Hi Jurgen,
When I measured that E2 carrier on 8 August I was using a remote online rx, the Broome (18S,125E) globaltuner.
VK6KXW was receiving it very much weaker at his QTH 100km east of Perth (32S,116E), and for several days before. Condx have since declined with the solar flux.

According to the DX cluster archives, T6DD on 6m has been heard in Greece (3800km) via 2Es practically every day between 20 June and 9 July, and Afghan TV has been noted by SV1DH and DK2EA:

2014-06-29 15:21:46 SV1DH (KM18VA) 50.102T6DD (MM36OQ) 3804 Multihop ES 519 QSB; YA VIDS S5

DK2EA 50001.0 YAVIDEO (ES> in JO50UF 48250.0 S3 1613 5 Aug 2014

regards,

Tony

FM list asks that you include everything you receive under flat
conditions (excluding meteor scatter)-simple!
everything else belongs in the log book

if you exclude your daily scatter reception you'll have a boring
bandscan that doesn't increase the sum of human knowledge and is no
more interesting than an automatically generated bandscan

if you have a rotator then include every direction

That's a question I've asked myself and couldn't give a simple answer. I use "myFM" to log 'out of the ordinary' reception. To give some examples: Transmitters from Egem and the main transmitters from Lille generally go unreported unless they come in so strong that they have full RDS with 0% ber - as they are present all the time. Belgian stations slightly further away 200-250 km) will only get reported when they are at solid RDS levels. Stations that are regularly heard beyond 300 km get reported when they are stronger than weak tropo-scatter.
When it comes to low power stations I log them when they are audible even if they are less than 100km away.
Another complication is the propagation direction - I have good take off from NNW all the way round to SE (330 deg to 130 deg) - and poor take off particularly to the south. So I'll end up lkogging closer stations as they come through less often.

All in all I treat "myFM" as my personal log of significant tropo lifts as well as (of course) all SpE, MS and other modes

OK Tim, thanks for this. So FMLIST has some rules defined? Where can I find these? I am still learning to use FMLIST, although having been a country editor for many years.

FM list asks that you include everything you receive under flat conditions (excluding meteor scatter)-simple!
everything else belongs in the log book

if you exclude your daily scatter reception you'll have a boring bandscan that doesn't increase the sum of human knowledge and is no more interesting than an automatically generated bandscan

if you have a rotator then include every direction

OK David, thanks. You are right, the local situation with possible obstructions in certain directions also comes into play. As well as the quality of equipment being used, although this is shown in the header of each bandscan.

So it seems that the way to go is to include in a bandscan everything coming in under flat conditions, to include tropo scatter and aircraft scatter.

Still open to any other suggestions.

From: fm104rockinstereo@...
Topic: 33976 Message: 33985

Apologies in advance for the length of this reply but I thought it was an opportune time to have a think about this myself.

As it happens, I undertook a bandscan (SDR/notebook) last night at a remote field adjoining a national park. This is the second field trip in the last three weeks. I'm only bothering to spend petrol on this because conditions are abysmal as it's winter - and it's good exercise in the process (I walk in the national park upon dusk).

Ideally, I was here to observe any possible effects of knife edge refraction from a SOTA summit 1.1 kilometres (in a straight line) to the WNW. (The SOTA summit is not accessible by conventional sedan. In any event, access to the summit requires a short walk in knee high grass which is obviously unsuitable for night time!)

Unfortunately, it started raining heavily by about 7pm (Murphy's law) but I managed to put up a 5-el vertical FM yagi (including masthead) outside. I did get thoroughly drenched in the process but it was too far to drive here to 'throw in the towel'. The location was 1 h 20 min drive from home and I have never been here before.

A lot of meteor pings were noted here (none of which I bothered to log) and very little jet scatter which typically lasted only a few minutes. There was stubborn but weak reception from the 200 kW stations 455 km away which was always there over the hour. This may or may not have been be knife-edge refraction, as it persisted during heavy rain.

Of the signals heard, I would personally classify them as the following when compiling a bandscan.

Jet scatter: I would choose to include the jet scatter signals in the bandscan but denote them as transient scatter. Like Tim, I think omitting them would result in a fairly boring scan. I believe the amount of jet scatter at this location is vastly different to Europe (less traffic here) so including jet scatter is discretionary.

Meteor scatter: The meteor signals of course have no place in a bandscan, especially since activity is above average at the moment.

Tropospheric scatter: The aforementioned weak distant scatter I would also include.

Tropospheric index: This was nil within a 500 km radius (at the very least). I would expect much better results during a summer bandscan. I think it's critical to take note of the tropo index and include that when compiling a bandscan in FM List, otherwise it tends to be misleading. Accordingly, there is also a risk of losing credibility if it is not labeled appropriately.

Ideally if taking a bandscan during summer tropo, I would undertake a bandscan in a location I was familiar with. That way, it's much easier to discriminate between the permanent reception and the rest. If you are a long way from home on vacation (especially if you have to fly to get there!) this is of course completely impractical.

For me, it comes down to answering the question: What is the purpose of a bandscan? My answer would be that it is ultimately about assessing the suitability of any particular spot for DX.

So if that's my target, my bandscan ideally would canvass:

* the number of 'empty' channels available;
* the ability of the terrain to attenuate nearby major broadcast sites (e.g. 25-30 km away);
* any effects of hills/mountains or waterways in creating/obscuring paths;
* testing noise levels (e.g. interference, urbanization/number of nearby households, nearby TX images etc.);
* different azimuths;
* signal strengths (e.g. RDS decoding levels) &
* antenna/receiver sensitivity testing.

I guess one could take this any of these factors to the absolute Nth degree, e.g. denote dBm signal strengths beside each logging or perhaps measure noise levels on completely empty channels and compare these with the city. I would only consider going to that trouble for a totally unpopulated location that might be truly exotic.

With only an hour maximum of laptop battery power I was fortunate to be able test the antenna on the W, NW & N azimuths. Normally on a mountain I rarely have time to test more than one azimuth, especially if using a car radio in a tourist spot. I guess that the average bandscan is probably always going to be biased toward particular directions. To be comprehensive, it might be worth noting the direction the car antenna/external antenna faced on a compass/GPS and include it with the bandscan. Having said that, I admit I have rarely remembered to do that!

Ideally, the goal (for me anyway) is to achieve a compromise between a bandscan ending up simply too generous (tempting, but potentially misleading) and just plain 'dull'. A bandscan should involve little effort IMHO, otherwise you might as well punch in the coordinates into FM Scan and do a projection from the comfort of a warm house! (FM Scan projections are extremely useful of course; I would be lost without them).

At the end of the day, I dare say even compiling the most flawed or unconventional bandscan (especially in a remote location that nobody else has been to) into FM List is better than none at all!

Good DX!

Band 2 Meteor Scatter:
89.0 1054 CZE Radio Impuls, Ostrava/Host?lkovice (MO) Jingle ID 1287km
*
**Band 2 General Scatter:*
100.5 0911 G Classic FM, Meldrum (SC-ABS) Classic FM programming in brief Belmont power cut 501km **
95.3 1641 D YOU FM (hr), Hardberg (hes) Pops, as web 712km
107.3 1642 D hr4, Heidelstein (Rh?n) [bay] (hes) Jeanette song, as web 729km

** Personal Skegness 'First' via the respective mode

This is my rather feeble Perseids effort for 14th, plus a few bits of scatter I had, unexpectedly, because scatter conditions are dire at the moment.

My time for DXing the Perseids today was cut short due to 1: Daughter and family visiting (good!). 2: A radio friend visiting, none other than Ian Kelly and family (also good) and 3: Acquiring a lodger, somewhat unexpectedly (not sure at this point!). So it was a busy day and great to see family and radio friends alike.

Yesterday, I also raised the 9.2 to its maximum height, which is about a meter higher than it ever has been here. I had originally lowered this right down this week due to the strong, gusty winds we've had. I didn't get any real chance to try the 9.2 at its new height though as the winds suddenly returned to their strong gusty levels again. Funny that, the pathetic excuse of a met orifice told us yesterday that we would have a ridge of high pressure settling things down over England. Oh, it was going to be dry too! Being used to their gross inaccuracies we just expected the opposite to happen - which it did! Their corrected forecast for today has dumped the high pressure in favour of a low pressure system (they really didn't see this coming? !!!) adding in gusty winds and thundery downpours. /Oh what a total surprise I never saw that one coming!/ (Sorry, another attack on our useless met orifice is long overdue). I actually thought I might have coined the term "met orifice" but it looks like other's got there first. Some interesting reading here folks!

Hi Janpeter,
when you add a station to your logbook, you'll get a notice saying
something like- please use this for reception you do not receive all
the time, for everything else use the bandscan- or words like that

From: John Faulkner, Skegness
Topic: 33976 Message: 33988

I've seen this too but I can't remember where exactly it is. I'm sure it won't appear if I go looking for it too.

I think there will always be differing opinions on this, as there are on every other aspect of our hobby. Nobody's wrong, but in an ideal world, we would probably have a bandscan for constant reception - i.e. our locals/semi-locals which never fade. Then a bandscan which shows regular scatter, then one for less regular scatter. Even then there will be some overlapping boundaries as to what is regular vs semi-regular vs rare.

I have been planning to do several scans like this, but feel it's going to be a ball ache doing so. The fact is, my main all-time tropo log includes all my scatter too. I really ought to devise something like a colour coded system to show the differences, other than have everything on one page as I do now. This isn't helpful at all.

One day. But I do need to do this so my log becomes more meaningful.

John

33989. more from Jodrell Bank

Yahoo group: SkywavesDX (2014)
Date: 2014-08-15 17:25:18 UTC
From: Tim Bucknall
Topic: 33989 Message: 33989

some more stuff that Jodrell radiates in my direction when its pointed at me

87.1 huge holme moss mixing product (not available when jodrell not
beaming at me)

and even more surprising than Tacolneston IMO...
86.3 Rowridge mixing product!

this is good news as it means the R9500 is more intermod resistant
than i thought
initially i had assumed the 87.1 mix to be permanent and caused within
the rx, but apparently not, the 9500s front end is absolved of
guilt!

33996. "piggybacking" off Jodrell Bank

Yahoo group: SkywavesDX (2014)
Date: 2014-08-16 15:18:57 UTC
From: Tim Bucknall
Topic: 33996 Message: 33996

Hi all
I noticed the dish was just above at the horizon this afternoon so
went out to see if i could get any advantage off it,
we parked as near to the dish as possible and I was able to use the
induction from the metal structure to get F2 as high as an unid radar
34.2mhz (similar sound to antarctica radar)- not bad considering the
dreadful F2 condx

(FYI:The structure apparently doesn't radiate any mixing products
unless its wet)

since the redevelopment you can't walk up to the dish without paying
admission, so
we left the visitors centre and drove around the nearby country lanes
trying to get in the beam of the 76m dish

The dish was a little too high for optimum results but the very weak
BBC Radio 4 from Scotland on 94.9 may have been a genuine reflection
as i lost it when the dish was raised

33998. Latest XDR-GTK Software Version (v0.3) Anomalies

Yahoo group: SkywavesDX (2014)
Date: 2014-08-17 14:18:45 UTC
From: John Faulkner, Skegness
Topic: 33998 Message: 33998

http://youtu.be/pHSTQTxkkb8

I have just downloaded the latest XDR-GTK software (v0.3) and there are a few anomalies which I am not sure how to correct.

1. The audio level is too quiet. Well down on all previous XDR-GTK versions.

2. The unusual signal strength display. This constantly reads S9+30dB when the "S-meter" display is selected too.

3. The appearance of scrolling numbers at the left of the waterfall display.

4. The window automatically widens and narrows depending on the RDS PS display.

I know that point 4 is due to not having the correct font installed, but I do not know which font I need and how to install it. Is this a simple Windows font installation or is something more specific required?

Thanks for any info on how I might correct these.

John

Hello John,

I asked Konrad about this issue as I also gave 0.3 a try. This is what he wrote.

Please download and install the Arduino IDE first:
http://arduino.googlecode.com/files/arduino-1.0.5-r2-windows.exe

Then open xdr_i2c.ino file with it, choose Tools -> Board -> Arduino
Duemilanove w/ ATMega 328, and upload it (button with right arrow) to
the Seeeduino board.
If you get an error during upload you'll have to select correct serial
port (Tools -> Serial port). Keep your modified align.ino file for
future updates.

73

Herman

So it's like a brand new installation from scratch? I will try this.

I had better make sure I back up my personalised alignment file.

Thank you.

Thanks Victor.

Where do I find the firmware update?

This is getting the better of me. The Arduino update isn't working at all and I appear to have some files missing.

I am still able to use the previous versions of XDR-GTK on my laptop (phew!) so I will start the whole installation procedure again from scratch on my desktop machine first, after the firmware update. I presume this is done in the same way the ino files are uploaded to the Seeeduino board? This is quite complicated to me.

Thanks

John

I mean you must upload the latest source code of XDR-I2C controller in Seeeduino board
http://fmdx.pl/xdr-i2c/
http://konrad.fmdx.pl/xdr/xdr-i2c-latest.zip

"Old" Arduino IDE should work well I think.

Victor

Why to use previous versions? The latest is better.

Previous versions work but with some above errors like wrong signal strength and so on.

Victor

34010. Funcube Dongle Pro question

Yahoo group: SkywavesDX (2014)
Date: 2014-08-17 19:11:24 UTC
From: Privat Patrice
Topic: 34010 Message: 34010

Hi

I will shortly own a second-hand Funcube Dongle Pro, a discreet entry into 21st century radio monitoring for me though

I'm way behind you folks.

Is this device any good for FMDX ? I understand that it might get the RDS and PI and PS directly without me interfering

inside the machine with a welder. So could I park all night on a suspected MS or spE channel and collect the stored information in the morning

about possible overnight skips with RDS info attached ? Or even scan with a suitable software the half dozen free

channels left in my hometown FM spectrum to maximise my chances ?

And, if yes to these questions, which software would be the best under Win8 ?

Many thanks for your help.

Yes, it will work fine on FM DX. I use SDR-Radio (v2.sdr-radio.com) with it (decodes RDS and will temporarily store them. SDR Sharp will work with it also. It is all done in the software from the digital I/Q stream received, so no delving around to connect to an RDS chip is required!!

It is very slightly prone to overloading (I have 4 250kw TXs 39km line of sight sea path from here) and get a few weak images. The RF gain is adjustable though and I found I could vastly redude any images with a little adjustment.

Worked well here though, it did fine for me during the last (2013) Es season.

Jim.

Subject: [SkywavesDX] Funcube Dongle Pro question

Hi

I will shortly own a second-hand Funcube Dongle Pro, a discreet entry into 21st century radio monitoring for me though

I'm way behind you folks.

Is this device any good for FMDX ? I understand that it might get the RDS and PI and PS directly without me interfering

inside the machine with a welder. So could I park all night on a suspected MS or spE channel and collect the stored information in the morning

about possible overnight skips with RDS info attached ? Or even scan with a suitable software the half dozen free

channels left in my hometown FM spectrum to maximise my chances ?

And, if yes to these questions, which software would be the best under Win8 ?

Many thanks for your help.

If you use SDR# and download the Frequency Scanner/Manager plug in - you can scan channels - and when a strong enough signal appears (user definable) it will open the audio squelch and alert you. But although SDR sharp has RDS decoding with pi code - you can't log it to a file.
If you use HDSDR you can link it to the RDSSpy program and decode the RDS data and automatically save to a file in "MS" mode. But your computer needs to have a soundcard that can sample at 192kHz. Computers with built in soundcards to the HD Audio spec will work but you need to directly feed the signal out of the HDSDR and into the Soundcard - which is fairly easy if you know how. If you type "HDSDR and RDSSpy" in the search box on this from Andy Pritchard and myself.

I've got both SDR# and HDSDR - I mainly use HDSDR - but if I want to have background scanning I'll run SDR#. I'm running a super cheap RTL-SDR dongle at the moment.

Also don't forget the 64-74 MHZ OIRT band - dipole needs an element length of 1m for each half.

Good DXing

34016. RE: [SkywavesDX] Latest XDR-GTK Software Version (v0.3) Anomalies

Yahoo group: SkywavesDX (2014)
Date: 2014-08-18 10:10:57 UTC
From: Satnipper
Topic: 33998 Message: 34016

The firmware update is at http://konrad.fmdx.pl/xdr/xdr-i2c-latest.zip which is linked to from http://fmdx.pl/xdr-gtk/ - This latter page states that you need to update the firmware to use XDR-GTK 0.3.

However as the new firmware wont compile under my existing Arduino 1.5.2 or the new 1.5.7 you can't download it to the board anyway.

Regards

Stuart

I mean you must upload the latest source code of XDR-I2C controller in
Seeeduino board
http://fmdx.pl/xdr-i2c/
http://konrad.fmdx.pl/xdr/xdr-i2c-latest.zip

"Old" Arduino IDE should work well I think.

Victor

Ah. Thanks Stuart.

I didn't realise that the xdr-i2c files were the actual firmware update.
I was expecting this to be a different file.

Thanks

John

34018. Re: [SkywavesDX] Latest XDR-GTK Software Version (v0.3) Anomalies

Yahoo group: SkywavesDX (2014)
Date: 2014-08-18 12:30:56 UTC
From: olivier GUILLAUME
Topic: 33998 Message: 34018

Dear Stuart

on you computer go to C:\Arduino\libraries\

and rename the folder "I2cMaster" in "I2cMaster_old"

Compile again then it should work.

Hope this help !

Best regards,

Olivier GUILLAUME (F4CMB)

Subject: Re: [SkywavesDX] Latest XDR-GTK Software Version (v0.3) Anomalies

Dear Stuart

on you computer go to C:\Arduino\libraries\

and rename the folder "I2cMaster" in "I2cMaster_old"

Compile again then it should work.

Hope this help !

Best regards,

Olivier GUILLAUME (F4CMB)

2014-08-17 19:54 GMT+02:00 'Satnipper' satnipper@... [SkywavesDX] <SkywavesDX@yahoogroups.co.uk>:

There’s an error message when you compile the new firmware:

Arduino: 1.5.7 (Windows Vista), Board: "Arduino Duemilanove or Diecimila, ATmega328"

I2cMaster\I2cMaster.cpp.o: In function `TwiMaster::restart(unsigned char)':

C:\Arduino\libraries\I2cMaster/I2cMaster.cpp:180: multiple definition of `TwiMaster::restart(unsigned char)'

I2cMaster.cpp.o:C:\Users\ADMINI~1\AppData\Local\Temp\build262622909307583926.tmp/I2cMaster.cpp:180: first defined here

I2cMaster\I2cMaster.cpp.o: In function `TwiMaster::stop()':

C:\Arduino\libraries\I2cMaster/I2cMaster.cpp:206: multiple definition of `TwiMaster::stop()'

I2cMaster.cpp.o:C:\Users\ADMINI~1\AppData\Local\Temp\build262622909307583926.tmp/I2cMaster.cpp:206: first defined here

I2cMaster\I2cMaster.cpp.o: In function `SoftI2cMaster::start(unsigned char)':

I mean you must upload the latest source code of XDR-I2C controller in Seeeduino board
http://fmdx.pl/xdr-i2c/
http://konrad.fmdx.pl/xdr/xdr-i2c-latest.zip

"Old" Arduino IDE should work well I think.

Victor

34020. Re: [SkywavesDX] Latest XDR-GTK Software Version (v0.3) Anomalies

Topic: 33998 Message: 34020

Did you restart the arduino IDE after renaming the folder ?

I compiled here without any problem after this operation and XDR-GTK V3 is running like a charm !

Olivier

Stuart,

If it still doesn't work, simply remove the I2cMaster folder from your libraries folder and move it to another place.

This should definitely solve your problem, there's no reason !

34022. RE: [SkywavesDX] Latest XDR-GTK Software Version (v0.3) Anomalies

Yahoo group: SkywavesDX (2014)
Date: 2014-08-18 20:03:09 UTC
From: Satnipper
Topic: 33998 Message: 34022

Ca marche!

For some reason you have to remove completely the I2cmaster folder. Even if you rename it the IDE still looks in it. In the latest firmware zip file the ic2master file is included so the IDE should not look in the libraries folder.

XDR-GTK 030 running here fb.

Merci bien Olivier

Regards

Stuart

Subject: Re: [SkywavesDX] Latest XDR-GTK Software Version (v0.3) Anomalies

Dear Stuart

on you computer go to C:\Arduino\libraries\

and rename the folder "I2cMaster" in "I2cMaster_old"

Compile again then it should work.

Hope this help !

Best regards,

Olivier GUILLAUME (F4CMB)

2014-08-17 19:54 GMT+02:00 'Satnipper' satnipper@... [SkywavesDX] <SkywavesDX@...>:

There’s an error message when you compile the new firmware:

Arduino: 1.5.7 (Windows Vista), Board: "Arduino Duemilanove or Diecimila, ATmega328"

I2cMaster\I2cMaster.cpp.o: In function `TwiMaster::restart(unsigned char)':

I mean you must upload the latest source code of XDR-I2C controller in Seeeduino board
http://fmdx.pl/xdr-i2c/
http://konrad.fmdx.pl/xdr/xdr-i2c-latest.zip

"Old" Arduino IDE should work well I think.

Victor

34023. Re: [SkywavesDX] Latest XDR-GTK Software Version (v0.3) Anomalies

Are you doubly sure that you have extracted all the files from the new zip file into an empty folder called xdr_i2c, and you have opened the xdr_i2c.ino file in the Arduino IDE?

From: Privat Patrice
Topic: 34025 Message: 34025
Attachments: 1 described; binary payloads are missing from this source WARC

Hi Friends,

i bought a Funcube Dongle Pro v1.1 and I have downloaded 2.70;

Spent the morning reading what's available on the Web to try and understand

as much as possible how it works (quite complicated to me)

Anyway I updated the firmware and this is a list of the ingredients i used

as well as my current setting :

export18f.bin

FCHID002

FCHIDBL001

extI0_G0MJW.dll

WinradPX.dll

I'm under MME'16-bit) drivers.

Any way I finally heard a local FM station tolerably well (a bit of noise maybe due to overload though I reduced the Funcube soundcard to the minimum level = 1)

I have chosen input and output both at 192000 which the max my setting allows.

Now comes the 64,000 rupees question : when I switch to AM on VH channels of interest to me (namely ACARS 131.725 Mhz or London ATC 128.425 mhz) I don't hear a thing (only white noise), while my nearby scanner Yaesu VR120 gets loads of traffic).WHY??

I have only a small whip antenna right now, plugged to the rear end of the FCD (SMA to BNC) and I put the thing as far as i can go grom my ACER Aspire v3 laptop;

here's my screengrab, can you HELP ??

and another question, why don't I get any waterfall or spectrum thing on the upper half of my screen ?

Many thanks for the Life buoy, mates !

patrice

I did indeed Stuart.

Since I last wrote, I have been out and had a good think. I think there must be remnants of the old installation still in the system (as with your own instance of the i2cmaster folder being present, even after renaming).

I need to wipe the whole lot out of the system and start from scratch methinks.

XDR-GTK v0.3 installed and working!

I just deleted everything I could find which was tied in with the previous installation. The "Libraries" folder, etc., you name it. It was simplicity itself after this.

The version of Arduino I am using is 1.5.5 though, I don't know if I would benefit by having the 1.5.7 version Stuart mentions, unless that is for MAC.

So thanks Stuart, Mr Konrad (I still don't know his name) and Olivier for your help.

Very good, JF.

I don’t think it matters if you use 1.5.2, 1.5.5 or 1.5.7 - just minor updates of the Arduino IDE.

And yes, thanks to Konrad for mod and Olivier for invaluable help.

Cheers

Stuart

Band 2 Meteor Scatter:
92.9 0109 SVN Slovenija 1, Nanos (po) Slovenian cover of Edwin Collins song, as web 1284km **
92.9 0132 POL Radio ZET, Gryfice/Trzyglowska (ZP) YL soft rock song, as web 985km **
92.9 0140 POL RMF FM, Wroclaw/Z?rawina (DS) Chris Reas Road To Hell, as web. Part of 18 second MS burst. 1164km **
92.9 0140 D MDR 1 Radio Sachsen-Anhalt, Eisleben (san) German pop song, as web. In middle of 18 second burst 781km **
92.9 0149 G BBC R4, Unsure which site Frequent bursts. BBC WS "Click" programme, as podcast. Rothesay? **
92.9 0410 DNK DR P3, Holstebro - Mejrup/Kalsg?rdvej 11 (mjy) Modern soul track, as web 644km **
92.9 2141 F France Musique, Besan?on, Chamonix or Montpellier Jazz, as web **

** Personal Skegness 'First'

92.9 used to be a good frequency for meteor scatter when I lived in the North Midlands. It's the first time I have tried it here and there were many, many bursts and pings all night. France Musique was the most frequent burster. I don't know which transmitter was being received as there are three main possibilities. The France Musique stream switched off early overnight so I had to wait until this evening to hear that. Montpellier would be the most likely candidate.

There was an 18 second burst at 0140 in which three stations were identified after matching them to their web streams: RMF FM from Wroclaw; MDR 1 Radio Sachsen Anhalt from Eisleben and Radio Zet from Gryfice. Interesting to note that none of these transmitters were exactly inline with each other as I had expected.

I was surprised how often BBC Radio 4 was heard via MS. Since most of the transmitters are too close, I have to assume that Rothesay looks like a good bet. This was mostly heard with BBC World Service programming and I caught a BBC Radio 4 ID during one burst around 0800.

Many more stations were heard whose streams I didn't record, including a couple of unidentified German language stations. Since these didn't match up with the recorded streams (I recorded all streams from Germany itself) I have to assume they must have been flea powered transmitters from Austria or Switzerland.

I think I'll try 93.0 tonight.

Good DX!

34032. Meteor Scatter Reception - an oddity

Yahoo group: SkywavesDX (2014)
Date: 2014-08-20 22:53:41 UTC
From: davebunyan@...
Topic: 34032 Message: 34032

Looking through the (lack of) stations captured on the scanning set up for today I came across the following line in the RDSSpy log

16:18:05-16:18:08 PI:F209 PS:RADIO-F. BER 0%

F209 is France Bleu and Radio_F is Federalni Radio from Bosnia-Herzegovina

The fact they are on the same line of the log and only 3 seconds of signal indicates the reception is on the same frequency. Only one frequency that I scan that has both France Bleu and Fedaraini Radio on it is 91.7 which seems to indicate that for a brief instant France Bleu Perigord was received to give the pi code and at almost the same instant Fedaraini Radio came through to furnish the station name! My first thought was that a single meteor whizzed past and I got two for the price of one.

BUT - just before posting and getting a red face afterwards I went and checked the RDSSpy raw data - which clearly shows on each line of data received the pi code is F209 and the PS over four lines spells out Radio-F.

Does this indicate that BIH are changing their pi codes to conform to the standard of the 2nd digit indicating a national channel (if I understand it correctly?).

Apart from that tiny burst of interest it's been another day of zero SpE - and it looks like the summer tropo conditions have dropped off.

I have received unrelated PI and PS on the XDR-GTK display only recently. It seems you can get two for the price of one. Or is it BOGOF? (Buy One Get One Free)

I won't trawl through the log but a recent log showed the PS name where the PI code did not match. It can only be explained by having received a full PI and PS from one station, then a weak signal from a different station must have come along and changed the PI but wasn't sufficiently strong to produce a PS. It can happen.

Dave, I don't know if you read my comment about multiple stations on the same burst not being inline. I just posted in my log: /"There was an 18 second burst at 0140 in which three stations were identified after matching them to their web streams: RMF FM from Wroclaw; MDR 1 Radio Sachsen Anhalt from Eisleben and Radio Zet from Gryfice. Interesting to note that none of these transmitters were exactly inline with each other as I had expected."/

I was fascinated by your recent observation of multiple stations from one MS burst being on the same path, but today's log had all three stations on different bearings. I was discussing this with Andy in the Skywaves chat today. We could only conclude that meteors burn up, skim off track when they do so or fragment, etc., thus producing the possibility of reflecting signals from different angles. We can only guess I suppose, but I was fascinated by your 'same bearing' theory. I will make a point of studying the bearings again when there are multiple station bursts.

Hi John,
The "two for one" shows up at times when I'm running the ST-311 in scanning mode and there is a good SpE opening. As the receiver only stays on frequency for 4 seconds when a signal is present it can happen, as you say, that the PI Code gets replaced but not the PS.

As for multiple txs from one meteor - when I posted that I got four off one burst 'all in a line' - that was a specific instance only - and actually was a bit of surprise. I would expect when multiple station reception happens, that more often the stations would not be in line. I wouldn't be surprised if you could plot a track for a meteor which would cross the mid-point of the path of at least two of the stations received on the same burst.

BTW - that's two tantalising hints you've left in recent posts 1)using streamwriter to record multiple streams and 2)another reference to checking the multiple streams. Any chance of posting a "how to" on your blog? - as although I've downloaded Streamwriter there is not much to go on.

I second Daves request to John!
I thought John had posted to the group about his methods but it looks
like i was wrong.
The group def need to hear about your adventures in stream recording :-)

Basically John looks at FM list selects the 20 most likely candidates
for meteor reception on a given channel and records their streams
overnight along with the channel hes monitoring
when he gets a ping, he flips through all the recorded streams looking
for a match

genius!

It would be interesting to play back a wideband sdr wav file of a
meteor ping and see the effects of the ping at different frequencies,
anyone doing this yet?

Hi Dave.

I already wrote an article on my blog detailing how I do my MS recording with StreamWriter.

http://skegnessdx.blogspot.co.uk/2014/05/meteor-scatter-dxing-different-approach.html

I didn't post the whole article to the group but I put a link to it some time ago. I hope it's not a case of Yahoo dropping the post. I already know that the occasional Skywaves post doesn't get forwarded to Thunderbird. I just cannot be bothered with that useless new web page of theirs. All my Skywaves posts are sent and received via Thunderbird.

The only things I'll say about my MS DXing method is that you need a lot of time to process the data after an overnight session. Bandwidth usage is ENORMOUS as you might expect, so you'lll need an ISP which delivers a truly "unlimited" service. I use Sky.

I recorded several videos showing how to go about each stage of setting up StreamWriter, etc. My intention was to produce a detailed 'everything you need' video, but there were too many challenges when it came to it, so I just did the article on my blog.

If you need to search for anything on the blog, the little search box in the top left is excellent. Just type in "StreamWriter" for instance.

Hope there is enough info in teh article anyway. If you want any further info, just drop me a line.

Thanks for the 'genuis' bit Tim. I am sure many people would like to call me something else, i.e. 'geek'. :O) I couldn't possibly argue if they did.

This method is not for everybody. There are people who still like to do 'traditional' single frequency recording, actually still sat by their receivers, and there's nothing wrong with that whatsoever. It's a Cadbury's Creme Egg "how do you eat yours?" thing. We all have our preferences.

Hope the article is clear. If there's anything which needs clarifying (being the kink of cock-ups) just let me know. Very often my brain cell runs out of sync.

Cheers

John

From: Tim Bucknall
Topic: 34038 Message: 34038

Great Article John,
i love reading how people think up these new dxing techniques
if Reflexion wanted to publish this would that be ok?
(i haven't spoken to them, but it seems the sort of thing they would appreciate)

I am happy for anybody to reproduce this. If it helps the DXing community then that's great. You know some people will tear this to shreds and will probably call it cheating. "You should be listening live or it doesn't count", etc. I'm fine with that also. We all do things differently. I know I could never go back to DXing with my Rotel RX202 or my Trio 9R59D, but that 'romance' is still in me and there are countless fond memories. Just remember. Considering today's amazing trechnology (much of which is free), it was 's with those old receivers that I had some of my best DX catches! Not to be knocked.

From: John Faulkner, Skegness
Topic: 34032 Message: 34041

Some further points about this method of overnight radio and stream recording which may or may not have been covered in my blog.

When a meteor burst occurs and you are searching for a parallel, it may be necessary to record more streams than you might like, because you might find that more than one station is playing that song. The fact that popular songs might be being played simultaneously on different stations is one thing, but the most important thing is to look out for overnight networked programmes. Germany is such a country, so make sure you record ALL stations on the frequency if possible, or just record at another time of the day. *This system is not just about matching meteor bursts with audio streams, but also about ruling out other stations. *

If a particular transmitter propagates via MS, chances are you'll hear it several/many times in one session, adding further confirmation.

Wow superb DX conditions there Ruud :-) Would it be possible to get as far inland as Jordan or Syria? The tropo is nearly always intense in the eastern Mediterranean in the summer though. Were there a lot of locals to contend with?

Good DX.

Hi Nick,
Yes it was amazing especially the 16 and 17th when allmost all locals were gone due to the tropo.
Also E5 TRT TV1 Antalya was complete gone and replaced by ERTV 1 and 2 fighting it out !
There were also many locals close by see the bandscan at
http://www.fmlist.org/fi_bs_public_i.php?usage=B&la=de&omid=3400

Hi Nick,
Yes it was amazing especially the 16 and 17th when allmost all locals were gone due to the tropo.
Also E5 TRT TV1 Antalya was complete gone and replaced by ERTV 1 and 2 fighting it out !
There were also many locals close by see the bandscan at
http://www.fmlist.org/fi_bs_public_i.php?usage=B&la=de&omid=3400

Wow superb DX conditions there Ruud :-) Would it be possible to get as far inland as Jordan or Syria? The tropo is nearly always intense in the eastern Mediterranean in the summer though. Were there a lot of locals to contend with?

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

All,
Today last day of our holiday in Antalya were I had amazing tropo last days.
Fm was crowded with Israel, Lebanon Cyprus and Egypt and despite many local Turks they all went gone due the exceptional tropo.
I downloaded fm list of the tropo countries so could find lots of it and logged many in Fmlist but a few still are unids like:
103.6 disc fm pi 6b9e
107.2 MBS pi 607d
91.9 meteor pi 0003 Arabic
107.9 meastro fm pi f179
98.9 aghani pi a101
103.7 got only pi f000
106.5 radiod ? Pi 80a1
102.2 empty ps pi: 415a
99.4 empty ps, pi: 0000 maybe srt?
The list of logs is huge and will be sent here next week when we are at home.
I also had daily all Israël rds with B at the end which must be tx Beer Sheva, das alzo a E of Eitanim Jeruzalem but not one time a H of haifa which is strange because thats listed in Fmlist.
I also had plenty of Egypt tv analogue in band 3 and uhf and Tele liban on E11.
Also dvbt from Cyprus.
Ruud

34048. Skegness Log: 21-08-14

Yahoo group: SkywavesDX (2014)
Date: 2014-08-21 22:04:34 UTC
From: John Faulkner, Skegness
Topic: 34048 Message: 34048

Band 2 Meteor Scatter:
93.0 0043 S SR P1, Emmaboda/Eriksm?la-B?lshult TM (ka) Overnight running water effects 1051km **
93.0 0207 D BFBS Radio, Braunschweig/Drachenberg (nds) Presumed with English OM talking about "forces world" 712km **
93.0 0219 POL RMF FM, Katowice/Kosztowy (SL) Pitbull song, as web 1333km **
93.0 0232 D MDR 1 Radio Sachsen, Hoyerswerda (sac) Andre van duin Luv song, as web 967km **

** Personal Skegness 'First'

There was a 90 second long burst at 05:15:13 this morning. A separate (leader?) burst also occurred at 05:15:09. During the longer burst I heard FR David's "Words" and various other bits and pieces, but nothing was in parallel with any of the recorded web audio streams. MS can be so contrasting and challenging sometimes. You can have a really long burst like this and identify nothing, yet a brief snippet of an oldie or an unusual song you recognise can bring forth a result or two.

Good DX!

Hi

had Turkey this past hour (and filmed it) on 3 channels 88.7 89.5 and 93.7

89.5 had an RDS "kemer"

also Greece, Bulgaria, Croatia and many hams on 6m (HA, YU, S5, E7, SP)

Gimme time to sort it out !

cheers, best DX

34097. More about Turkey via Sporadic E today

Yahoo group: SkywavesDX (2014)
Date: 2014-08-22 16:55:40 UTC
From: Privat Patrice
Topic: 34097 Message: 34097

The station on 88.7 was broadcasting Classical Turkish music, so it is likely to be Karaburun (TRT Nagme) whose webstream now plays the same

kind of mix.

89.5 _KEMER_ was probably TRT Canakkale, the most powerful Tx on that frequency by far.

The 2 transmitters are in neighboring grid squares, respectively KM38 and KM39 and it is consistant with my getting ex Yugoslavia and Thessaloniki

(ERT_NET clear on 88.0) at the same time.

There was a brief appearance of SHumen, Bulgaria on 87.6 (_BNR_) as well as Greek pop (Laikos ?)

Will soonpost my films on YT;

Cheers

Pat

34110. Sporadic E Loggings for 22 August 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-08-22 22:17:13 UTC
From: Janpeter van Dijk
Topic: 168 Message: 34110

Hi All,

Now where did that come from? After the worst sporadic E season that I have ever experienced and after the Es have been virtually absent for three weeks, came this BIG bang today.
An DX session that probably produced the best opening into Greece that I have ever seen.
Today may even have been the best day of the season. And it is end of August!
This is one thing I love about Es, it is totally unpredictable.

There are several UNIDs listed below, any help is much appreciated.

Some tips for FMLIST updating:
89.5 MKD, PI and PS for Radio 5
90.9 GRC, NERIT Trito is active
94.9 ALB, new PI and PS for Radio Energy
102,2 GRC, PI for Radio Agrinio
106,3 GRC, new PI for Ieras Mitropoleos

I could do with two more of these openings, before the season's closure.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Thank you Reijo.

This would appear to be the station.

Best DX!

John

From: Tim Bucknall
Topic: 34112 Message: 34112

Jodrell Bank or- the Tacolneston rebroadcasting service as it should be called is re-radiating on 87.5, if you're in the region point at it and lets see if its radiating in every direction

- ha! someones GPS system just came over the top of JB "in 700 yards turn right!"

No sign of the Manchester RSL today. Googling shows the convention dates as 22 - 24 Aug, maybe something has been cancelled.
- Julian, Stockport (Manchester)

Tim wrote:
no sign of the Jehovahs witness stations from Liverpool 87.7,
birmingham 87.9 or Manchester 87.7
so power must be absolutely tiny - like last year

Thinking about this, it seems more likely that the RSL is very low power and inside the convention venue at the MEN Arena

Julian wrote:

i agree, the stoke one last year was was a tiny signal, way under a watt, would love to know what the erp was

fyi:
just listening to a local CB'er harmonic on 81.975 he's obviously a serious dxer and says this years e season is awful compared to last year
No "pile ups"
no South african contacts (3 last year)
no reunion island (a few times last year)
general reduction in signal strengths

I think your right about the low power probably 1 w or lower and inside the convention venue as I am between Manchester and Liverpool and all other RSL's usually 25 w boom in here.
There's not a whiff of a signal on any of my aerials which is good for me as the past few months has been busy with RSL's.

"Serious dxer" - I presume you are being ironic.

Yes - lack of South Africa on Sp E here this year as well lol

Not been a bad season on 6m.

General consensus on ON4KST when discussing this year’s Es season was that it had been a relatively poor one, especially in W Europe.

A number of experienced Band 2 folk also consider this a poor season, on one or two cases, THE worst. And virtually no Es on 2m from the UK, just one opening that I am aware of.

And that bears out my own impression that this season has been a bit of a dud, probably the worst since 1992 (and that was a bad one)

Those on 6m who had plenty of new stuff still to work at the start of the season are (understandably) bound to think differently.

Jim.

"Serious dxer" - I presume you are being ironic.

Yes - lack of South Africa on Sp E here this year as well lol

Not been a bad season on 6m.

i agree, the stoke one last year was was a tiny signal, way under a watt, would love to know what the erp was

fyi:
just listening to a local CB'er harmonic on 81.975 he's obviously a serious dxer and says this years e season is awful compared to last year No "pile ups"
no South african contacts (3 last year)
no reunion island (a few times last year) general reduction in signal strengths

... and why shouldn't he be a serious DXer? CB, amateur, MW, FM, SW, 2m
6m, LF, MF, VHF, MHz, GHz, phone, data, analogue, digital. On which one
of those can't you be a serious DXer and why?

Thanks Jim,
I agree is the worst one since i got a proper fm set up in 1998

Its interesting that you mention 1992, the first e season i have a
proper memory of,
I was at my Grandfathers house in North Staffs, using a sony ICF 2001d
- (a wonderful MW performer but a sick joke on fm)

i clearly remember suddenly hearing the cures "friday i'm in love"
fading in and out across the whole band up to 108, i thought it was
overload until the DJ spoke in spanish

I'm with

Err – 3rd order harmonics in utility band, calling the Es season poor as no ZS or Reunion from NW England.

Apart from in the summer dip ZS and FR have been pretty easy shots on 10m the last few years. However the propagation mode is F1/2 – certainly not Es. If he is a serious dxer he's very confused about propagation. 10/11m F propagation experiences the so-called summer anomaly – Es is normally short range Europe on those bands.

You can be a serious dxer on any band or mode – that is not the germane point.

There’s been plenty of squares to work on 6m this season – regardless of whether they have been worked by an individual before or not.

As Jurgen said earlier – it’s been a season for quality – not quantity. Though having said that boys have had fun with TV DX, OIRT, Band I STLs, 6m Es in Caribbean and North America.

Yep – not too shabby a season.

Ah yes, a serious DXer. I just knew you were going to bring the new secretary of state for defence into this.

Whether we agree with your comments about the Es season or not, there is no reason for snobbery in our hobby.

Fact: Some people are deterred from reporting their DX catches to this group because they feel their loggings are insignificant. This is nonsense as you should know. Only a month ago I met somebody who would not report their own loggings to the group because they felt they were not good enough. Italian Es no less. Oh dear, so they didn't log Lebanon. Nobody else has logged Lebanon, nor Iraq, nor Israel, etc. So what? I haven't had a single example of double hop since moving here - and I've got a near empty band! This is the second time this summer I have come across this fear of reporting.

You of all people understand the principles of QRP operation and "Ultralighting". "DX" means distance, not necessarily /long/ distance. In other words, some of us have relatively basic equipment, but the DX is there for us all. We all have different equipment, levels of experience, etc. and you can have just as much fun hearing something semi-local DX.

I am stating the obvious but for the sake of those members who might feel unwelcome because of this, never forget that old saying, it's largely about _*being in the right place at the right time*_. This hobby does not have regulations which state that you must have a certain minimum amount of radio equipment, number of countries logged or xx years experience in the hobby. It's a ******* HOBBY ffs.

Go and take a sip of French wine and chill!

John

:O)

and so you did! I'd love to think that we can all hear DX like this in any part of Europe - and the best of it is - we can! A simple portable can receive the exotic.

You just reminded me. I was parked in a car park in Suffolk a few years ago. I'm pretty sure Tim was with me. We could hear Spain coming through on the car radio. This only had a simple rooftop car whip. Not a huge beam antenna several hundred metres up in the sky. Suddenly, Lebanon came up on the display. It was Nostalgie on 87.7 and 88.0. I am pretty sure we also heard Iraq that summer. My memory lets me down so much these days. Can you remember more Tim?

** Personal Skegness 'First'

My overnight MS recording became corrupted when saving, reducing the
file length from 8 hours to just 50 minutes. Nothing could be matched
up, other than shared overnight German programming.

On the Es front though, WOW! What a day! The propagation maps looked
like something from the middle of summer! Signals lasted a good three
hours plus with the Balkan countries dominating most of the time.
Slovakia made a good presence at times and the Czech Republic and
Austria poked their way through. Greece and Albania also kept trying to
take control and there was one moment were Albanian signals took over
across the band. But there was very little RDS and the Greek stations
were mostly impossible to trace due to a shortage of web streams. Arabic
signals were heard at times and one can only wonder where they were
coming from. Double hop from the Middle East? There certainly weren't
many Tunisian or Algerian possibilities. Conditions didn't really seem
to swing that way anyway. Certainly this was one of the more interesting
Es openings of the whole season!

Videos of the above DX:

That's nowt lad! I had China, Myanmar, Thailand, Kyrgyzstan, India, Pakistan and Afghanistan via Es, on just a portable "ultralight" radio with a telescopic whip. I got bored with it in the end ;)

From: Satnipper
Topic: 34077 Message: 34132

JF's polemic – while not pertinent to the original discussion (serious dxers do NOT put harmonics onto emergency service channels) – is essentially correct. There are perhaps too many experienced dxers writing this season off as they have seen and done it all before. I can see how this would intimidate some dxers from posting their own logs as the gurus are saying there is nothing worth logging.

You can only dx what the gods of propagation give you – and we have received *some* good conditions this year. And when conditions are tougher the effort put into improving your station pays off more.

Voila, et bonne sante

Stuart

Subject: Re: : Re: [SkywavesDX] RSLs

Ah yes, a serious DXer. I just knew you were going to bring the new secretary of state for defence into this.

Whether we agree with your comments about the Es season or not, there is no reason for snobbery in our hobby.

Fact: Some people are deterred from reporting their DX catches to this group because they feel their loggings are insignificant. This is nonsense as you should know. Only a month ago I met somebody who would not report their own loggings to the group because they felt they were not good enough. Italian Es no less. Oh dear, so they didn't log Lebanon. Nobody else has logged Lebanon, nor Iraq, nor Israel, etc. So what? I haven't had a single example of double hop since moving here - and I've got a near empty band! This is the second time this summer I have come across this fear of reporting.

You of all people understand the principles of QRP operation and "Ultralighting". "DX" means distance, not necessarily long distance. In other words, some of us have relatively basic equipment, but the DX is there for us all. We all have different equipment, levels of experience, etc. and you can have just as much fun hearing something semi-local DX.

I am stating the obvious but for the sake of those members who might feel unwelcome because of this, never forget that old saying, it's largely about being in the right place at the right time. This hobby does not have regulations which state that you must have a certain minimum amount of radio equipment, number of countries logged or xx years experience in the hobby. It's a ******* HOBBY ffs.

Go and take a sip of French wine and chill!

John

There's been plenty of squares to work on 6m this season – regardless of whether they have been worked by an individual before or not.

As Jurgen said earlier – it's been a season for quality – not quantity. Though having said that boys have had fun with TV DX, OIRT, Band I STLs, 6m Es in Caribbean and North America.

Yep – not too shabby a season.

Subject: RE: : Re: [SkywavesDX] RSLs

General consensus on ON4KST when discussing this year's Es season was that it had been a relatively poor one, especially in W Europe.

A number of experienced Band 2 folk also consider this a poor season, on one or two cases, THE worst. And virtually no Es on 2m from the UK, just one opening that I am aware of.

And that bears out my own impression that this season has been a bit of a dud, probably the worst since 1992 (and that was a bad one)

Those on 6m who had plenty of new stuff still to work at the start of the season are (understandably) bound to think differently.

Jim.

==========

Jim, Bournemouth, Dorset. IO90BR.

Elad FDM-S2, Perseus/FM+ and Funcube Dongle SDR Recievers

8-element OP-DES for Band 2, 12-ele ZL Special for 2m, plus wideband vertical.

Hi John,

An incredible list, especially given this time of year.

Unidentified/Unlisted:
> 89.0 1330 GRC Kosmos, unlisted. Jingle ID
> 87.9 1348 GRC Kosmos, unlisted. Jingle ID

This is the NERIT Kosmos program. Jazzy / easy listening format. Only four QRG's are included in FMLIST, but several more are active. It could be that they share transmitters with NERIT Sport (still wrongly listed as ERA Sport in FMLIST). I presume the tx for 87.9 to be Patra/Panahaiko.

> 105.4 1404 ? Nostalgie, ? 42C9 __DI*__ French Nostalgie jingle

This is Kanal 77 from Ohrid/Goreničка čuka (MKD)

73, Janpeter

Thank you Janpeter.

As you commented, this was one of the best openings of the season. I am rather stuck on the video recording/quick tuning method now. I got on top of this one straight away though. Could this be the end of the season now? I am checking the 6m maps for the next week or so anyway. I wouldn't be surprised if one or two OIRT openings spring up, but I am not going to hold my breath. This is amazing for late August.

Good DX!

John

its a dreadful season - fact!
having a few exotics on one day does not make a good season,
I had a Turkish station on E +MS that was new to me, and some nice
Ukraine/Belarus stuff

you can put as much effort into improving your station as you like,
but if the E skip isn't there you can't change it
tropo is a slightly different story IMO, improving your station does
help with weak scatter

If i'd only logged stuff i'd never had before my log book would have
been even smaller this summer
so the argument about jaded dxers having "seen it all before" doesn't
hold water

I don't know the exact mode but i do know that the places the CB'er
OM mentioned are possible in summer on 27mhz via complex modes & "link
ups" and his account holds water

i don't know how close he was, he could have been next door and the
3rd harmonic could have been mere milliwatts

yes John, i remember!

It's your fact not mine.

You can have Sp. E skip which is weak and which is booming in. Better antennas will help with weak signals whatever the propagation mode- to deny that is inane.

I can probably work Australia on 10m complex modes such as JT65 or wspr right now. Nothing to do with Sp E.

Stuart

34142. InnovAntennas FMDX-9

Yahoo group: SkywavesDX (2014)
Date: 2014-08-24 09:56:43 UTC
From: pentiz@...
Topic: 34142 Message: 34142

I have modeled the new InnovAntennas FMDX-9 here:

http://ham-radio.com/k6sti/fmdx-9.htm http://ham-radio.com/k6sti/fmdx-9.htm

Performance comparison with other antennas:

http://ham-radio.com/k6sti/curves.htm http://ham-radio.com/k6sti/curves.htm

Antenna modeling notes:

http://ham-radio.com/k6sti/notes.htm http://ham-radio.com/k6sti/notes.htm

I meant complex propagation modes not complex modulation modes!

From: davebunyan@...
Topic: 34142 Message: 34144

Some weird distortions in the patterns for that antenna. Me - I love the small 5 ele Yagi deign which is doing very well at 18.5 ft agl.

From: davebunyan@...
Topic: 34077 Message: 34145

According to the Ofcom RSL guidance notes - the max power allowed for the IBSA (JWs) RSLs would probably be a maximum of 300 mW erp - as it is covering a specific event - and not a broadcast to the public as such.
Interestingly Ofcom lists a number of RSLs in the main broadcast band

99.9 FM IBSA Leeds (JWs)
107.2 FM - Costessey, Norwich
106.8 FM - Harwich, Essex - Offshore pirate radio nostaligia broadcast

All of which have been and gone.

And who decided not to turn on and leave the ST-311/PC scanning whilst I was out for the day? Doh!
I just hope there is one more good SpE opening this year - and that some good tropo materialises soon.

From: Tim Bucknall
Topic: 34149 Message: 34149

Dear all,
spent yesterday in beautiful Dovedale, there was very little direct reception which made it very interesting, unlike home there were no solid signals, it was a case of tune to a channel and wait to see what fades up - like JFs home reception - check out 95.1!

34151. Radio Slobodna Makedonija

Yahoo group: SkywavesDX (2014)
Date: 2014-08-25 20:34:08 UTC
From: Janpeter van Dijk
Topic: 168 Message: 34151

Hi All,

Last Friday, some of you have received Radio Slobodna Makedonija for the first time. PI code 4223 and with scrolling PS. Thanks to http://www.predavatel.com.mk, this appears to be a new nation wide network with several new transmitters and some frequencies taken over from MR1. The current situation is as follows:

89.4 Radoviš/Kalugjerica
89.9 Ohrid/Gorenička čuka
89.9 Strumica/Suševo
89.9 Prilep/Treskavec
90.0 Tetovo/Kaleto
91.3 Kriva Palanka/Židilovo
91.5 Veles/Sveti Ilija
92.5 Kavadarci/Golem Ljubaš
94.3 Kičevo/Cocon
95.0 Kočani/Zrnovci
95.8 Bitola/Tumbe Kafe
96.0 Skopje/Gazi Baba
96.6 Štip/Turtel
97.7 Gevgelija/Mrzenski rid
98.9 Debar/Stogovo
99.3 Kumanovo/Stari lozja

73, Janpeter

Thanks Andy. I wouldn't have had any idea this was coming in, based on the 6m map at the time.

It's been Italy to the top of the band, with a sprinkling of Algeria and a dash of Tunisia! Oh, and with a French sauce topping (St Tropez area).

Bon DX!

Jean

34169. Band II Sporadic E Loggings for 26 August 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-08-26 20:48:49 UTC
From: Janpeter van Dijk
Topic: 168 Message: 34169

Hi All,

A short lasting Band II sporadic E opening this morning. Which started promising, with the MUF shooting up fast to above 100 MHz. But all was very wild and unstable and gone pretty soon after it had started.
Still, another bonus opening this late in the season.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Tuesday 26 August 2014
Band II Sporadic E Loggings:
MHz UTC ITU Program + Location Details km
87.70 0919 E Europa FM, Chinchilla de Monte Aragón (CAM-AB) 1540km

** Personal Skegness 'First'

Another nice late season opening. It was a bit messy at times with long
gaps of nothing, but with lots of little teasers, typical of so many Es
openings this summer.

Good DX!

Hello guys. I am Thanos Thessaloniki (Thanos Stauroupoli) and i am a DXer from greece. I help john identify greek stations. If you need help with any greek stations please contact me. My youtube channel is thanos thessaloniki. If you want,please reply to this post your youtube channels (if you have) so i can sub to you.

I wish the best DX to all of you!!

Thanos

Thanks Thanos
its great to hear from you.
if i ever hear greek stations at home in Northern England
they're normally very weak or its very short-lived reception so i
truly appreciate your offer

34180. Re: [SkywavesDX] Meteor Scatter Reception - an oddity

Yahoo group: SkywavesDX (2014)
Date: 2014-08-27 19:15:56 UTC
From: Janpeter van Dijk
Topic: 34032 Message: 34180

Hi Dave,

A late reply, I am working my way through older e-mails.

Several nation wide stations in BIH have recently changed their PI code. F209 is the new one for Federalni Radio. Radio Bobar now has F262.

73, Janpeter

Onderwerp: [SkywavesDX] Meteor Scatter Reception - an oddity

Looking through the (lack of) stations captured on the scanning set up for today I came across the following line in the RDSSpy log

16:18:05-16:18:08 PI:F209 PS:RADIO-F. BER 0%

F209 is France Bleu and Radio_F is Federalni Radio from Bosnia-Herzegovina

The fact they are on the same line of the log and only 3 seconds of signal indicates the reception is on the same frequency. Only one frequency that I scan that has both France Bleu and Fedaraini Radio on it is 91.7 which seems to indicate that for a brief instant France Bleu Perigord was received to give the pi code and at almost the same instant Fedaraini Radio came through to furnish the station name! My first thought was that a single meteor whizzed past and I got two for the price of one.

BUT - just before posting and getting a red fac e afterwards I went and checked the RDSSpy raw data - which clearly shows on each line of data received the pi code is F209 and the PS over four lines spells out Radio-F.

Does this indicate that BIH are changing their pi codes to conform to the standard of the 2nd digit indicating a national channel (if I understand it correctly?).

Apart from that tiny burst of interest it's been another day of zero SpE - and it looks like the summer tropo conditions have dropped off.

Rgds

David

It actually lasted an hour or so but remained very weak. NRK1 was the only station identified, on 87.8 and 88.0. 97.7 and 91.1 were the only other frequencies with obvious au. It was a feeble one!

I also had Holland on 87.9 and 88.0, both to the NNW, but I am still scratching my head in deciding whether these were received via au or via scatter. There was the usual peak to the ESE, tapering off to nothing around NE, then reappearing when the antenna was north. Their audio was then quite muffled and scratchy, so maybe they were auroral, but equally the XDR could have narrowed because they were too weak and coming in almost off the back. I somehow doubt the latter as they wouldn't be strong enough to come in on the back of the beam. Difficult to know for sure, but they did sound convincingly like au when the antenna was NNW, so I will keep them in the log as au.

We just want so AuEs now! :O)

Good DX!

John

Good aircraft scatter to Denmark and Norway this morning.

http://skegnessdx.blogspot.co.uk/2014/08/denmark-norway-via-aircraft-scatter.html

Rangstrup is 617 km and Bjerkreim is 703km

Aalborg was also coming in via scatter on 93.3 at 740 km but I wasn't recording at the time. I will try to capture this now.

Good DX!

34188. Re: [SkywavesDX] Re:: Bandscans

Yahoo group: SkywavesDX (2014)
Date: 2014-08-28 19:27:46 UTC
From: Janpeter van Dijk
Topic: 33976 Message: 34188

Thank you Leigh, Tim and John for your view on what should be included in band scans. To summarize, I think we agree that both permanent reception and aircraft / tropo scatter should be included. Ideally, with an indication of the propagation mode.
So maybe Günter is prepared to put an action item on his FMLIST todo list, to add some functionality to the band scan page in MyFM. Maybe some boxes to check, after which the logging will get a color coding.
Furthermore it is important to make any relevant notes in the header of each scan, like the tropo index at the time of the scan.

Thanks again and happy scanning!

73, Janpeter

Onderwerp: [SkywavesDX] Re:: Bandscans

Apologies in advance for the length of this reply but I thought it was an opportune time to have a think about this myself.

As it happens, I undertook a bandscan (SDR/notebook) last night at a remote field adjoining a national park. This is the second field trip in the last three weeks. I'm only bothering to spend petrol on this because conditions are abysmal as it's winter - and it's good exercise in the process (I walk in the national park upon dusk).

Ideally, I was here to observe any possible effects of knife edge refraction from a SOTA summit 1.1 kilometres (in a straight line) to the WNW. (The SOTA summit is not accessible by conventional sedan. In any event, access to the summit requires a short walk in knee high grass which is obviously unsuitable for night time!)

Unfortunately, it started raining heavily by about 7pm (Murphy's law) but I managed to put up a 5-el vertical FM yagi (including masthead) outside. I did get thoroughly drenched in the process but it was too far to drive here to 'throw in the towel'. The location was 1 h 20 min drive from home and I have never been here before.

A lot of meteor pings were noted here (none of which I bothered to log) and very little jet scatter which typically lasted only a few minutes. There was stubborn but weak reception from the 200 kW stations 455 km away which was always there over the hour. This may or may not have been be knife-edge refraction, as it persisted during heavy rain.

Of the signals heard, I would personally classify them as the following when compiling a bandscan.

Jet scatter : I would choose to include the jet scatter signals in the bandscan but denote them as transient scatter. Like Tim, I think omitting them would result in a fairly boring

scan. I believe the amount of jet scatter at this location is vastly different to Europe (less traffic here) so including jet scatter is discretionary.

Meteor scatter : The meteor signals of course have no place in a bandscan, especially since activity is above average at the moment.

Tropospheric scatter : The aforementioned weak distant scatter I would also include.
